Foreword

Vermont Tech is part of the Vermont State Colleges System (VSCS) that includes Castleton University, Northern Vermont University, and the Community College of Vermont. The college offers collegiate-level programs in agriculture; business; engineering technologies; applied technologies; health professions; and renewable energy.

Mission Statement

We provide career-focused technical and professional education in a caring community which prepares students for immediate workplace success and continued learning.

Institutional Values

Vermont Tech emphasizes the core values of dedication, integrity, and responsibility as a foundation for learning, career preparation, and citizenship. The college is dedicated to its tradition of helping students reach their full potential by developing their academic and scholarly proficiency; critical thinking and communication skills; civic responsibility; and global awareness.

The faculty, staff, administration, and students at Vermont Tech are committed to forming a stimulating, compassionate, and supportive learning community which fosters the personal and professional growth of all members.

Vermont Tech values its role in supporting the Vermont economy and meeting the needs of businesses by preparing highly qualified graduates in various occupations, as well as by providing businesses with opportunities for continuing education for their employees.

Academic Recognition

By authority conferred by the Vermont legislature, the Trustees of the VSCS have authorized Vermont Tech to grant the degrees of associate of applied science, associate of science, associate of engineering, bachelor of science, and master of science with a major in the program pursued.

The Vermont Academy of Science and Technology (VAST) at Vermont Tech has Independent School Approval for grade 12 from the Vermont State Board of Education.

Vermont Tech is an institutional member of the New England Commission of Higher Education, the Vermont Higher Education Council, and the American Society for Engineering Education.

Accreditation

Vermont Tech is accredited by the New England Commission of Higher Education (NECHE).

The following programs are accredited by the Engineering Technology Accreditation Commission of ABET, http://www.abet.org: Architectural & Building Engineering Technology; Architectural Engineering Technology; Civil & Environmental Engineering Technology; Computer Engineering Technology; Electrical Engineering Technology; Electromechanical Engineering Technology; Mechanical Engineering Technology.

The Automotive Technology program is accredited by the National Automotive Technicians Education Foundation (NATEF) (ASE), 101 Blue Seal Dr, SE, Suite 101, Leesburg, VA 20175.

The Dental Hygiene associate degree program is accredited by the Commission on Dental Accreditation, 211 East Chicago Ave, Chicago, IL 60611-2678, (312) 440-4653.

The Nursing programs, including the PN and RN re-entry programs, are approved by the Vermont State Board of Nursing, Office of Professional Regulation, 89 Main St, 3rd Floor, Montpelier, VT 05620-3402.

All Nursing programs are accredited by the Accreditation Commission of Education in Nursing (ACEN), 3343 Peach Tree Rd, NE, Suite 500, Atlanta, GA 30326.

The Veterinary Technology program is accredited as a program for educating veterinary technicians by the American Veterinary Medical Association, 1931 North Meacham Rd, Suite 100, Schaumburg, IL 60173.

Notice of College Regulations

The information contained in this catalog is current at the time of publication and subject to change at any time. The regulations included in this catalog and other official college statements are binding on all students. The college reserves the right to change any of the regulations or curriculum at any time. Students have had sufficient notice of all official regulations when such are contained in official publications or posted on the college’s website: www.vtc.edu.

Non-Discrimination & Equal Opportunity Statement

Every member of Vermont Tech should work to ensure non-discriminatory processes and practices with faculty, staff, and students. Qualified students are recruited for, admitted to, and participate in all college programs without discrimination on the basis of race, color, sex, sexual orientation, religion, creed, national origin, age, veteran status, or disability. Vermont Tech provides reasonable accommodations to create equal opportunities for students with documented disabilities.

Faculty, administrators, and staff are employed without discrimination on the basis of race, color, sex, sexual orientation, religion, creed, national origin, age, veteran status, or disability unrelated to job requirements. Vermont Tech makes reasonable accommodations to the known disability of an otherwise qualified applicant or employee.

Additionally, the Vermont State College System (VSCS) engages in affirmative efforts to recruit, admit, and support students and to recruit, employ, and support employees in order to achieve the diversity which advances the educational mission.

The VSCS complies with state and federal laws related to equal opportunity and non-discrimination. Any questions or complaints about potential or perceived discrimination in violation of any state or federal law should be directed to: the Vermont Tech Ombudsperson, the VSCS Office of the Chancellor, the Vermont Office of the Attorney General, or the federal Equal Opportunity Employment Commission.

If auxiliary aid or service is needed to apply for admission or employment, please contact Vermont Tech’s Learning Skills Specialist at (802) 728-1396. For questions related to Title IX, please contact the Title IX coordinator via mail at PO Box 500, Randolph Center, Vermont 05061.

Admissions

Application Deadlines

Vermont Tech has a policy of rolling admission for most majors. We process applications throughout the year until we determine that we have filled each term’s class and may close admission once the class is filled. Applicants are notified promptly of their admission status after a review of their complete file.

Admission to some programs is exceptionally competitive. Deadlines for application to these programs are below. After the initial round of reviews, complete files are reviewed on a rolling admission, space-available basis.

Dental Hygiene, Practical Nursing, Radiologic Science, & Veterinary Technology  December 1
Associate Degree Nursing  March 15
VAST  May 1

Standardized Testing

All freshman applicants must take either the SAT I, ACT, or Accuplacer. Applicants already out of high school may be required to take Accuplacer.

The College Entrance Examination Board code for Vermont Tech is 3941. The ACT code number is 4323.

Applicant Requirements

All applicants should submit a completed application with the application fee and a personal statement between 250 and 500 words discussing why they’re pursuing a degree at Vermont Tech or another topic of their choice. VAST applicants should submit an essay in lieu of the personal statement. Other requirements are listed below.

First-Year

- Official high school transcript with at least the first marking period grades of the senior year or official scores from a high school equivalency exam (GED)
- SAT I, ACT, or Accuplacer results

Transfer

- Official high school transcript or official scores from a high school equivalency exam (GED)
- Official transcripts from all colleges previously attended
- Official transcripts from any other VSACS school attended prior to summer 2002

If an applicant attended another VSACS school prior to summer 2002 or any college outside the VSACS, Vermont Tech requires official transcripts. These should be sent directly to the Office of Admissions from the college at the time of application. Transcript evaluations are available upon request.

Credit for applicable college courses completed may be granted for those courses taken at a regionally accredited institution with a grade of C- or better or C for any science course completed in the last ten years that's required for Dental Hygiene, Nursing, Radiologic Science, or Respiratory Therapy. Transferred grades aren't computed into a student’s GPA. Courses taken at an accredited institution on a pass/fail basis may be transferred. Vermont Tech may require the student to obtain a grade equivalent in the course. Exams may be required to show competence in subject material.

Vermont Tech is the final judge as to what transfer credit it accepts depending upon factors such as the student’s academic record, the institution attended, and the program selected.

Earned VSACS credits are transferable to other institutions at their discretion.

Healthcare Professions

- Indication of first choice nursing location
- Official high school transcript or official scores from a high school equivalency exam (GED)
- Official transcripts from all colleges previously attended
• SAT I or ACT results, if available
• Vermont Tech placement test scores
• Two letters of recommendation dated within the past six months and submitted directly to Admissions. Letters should address work ethic, communication skills, potential for adaptation to a fast-paced clinical environment, and potential to competently and compassionately deliver healthcare to patients across the lifespan. Letters from family members or friends can't be accepted.
• Current Basic Life Support for Healthcare Providers CPR certification (Nursing & Paramedicine)

All Dental Hygiene, Nursing, Radiologic Science, and Respiratory Therapy students are required to pass a background check prior to June 1 (see policy below).

Additional Requirements for Dental Hygiene
Accepted Dental Hygiene students must complete a four-hour observation in a dental office.

Additional Requirements for Nursing, Associate Degree
• An unencumbered PN license
• Vermont Tech PN graduates must have transferable credits in Anatomy & Physiology (8 credits), Nutrition (3 credits), and Human Growth & Development (3 credits) and a GPA of at least 3.0 in PN coursework (BIO 2120, ENG 1061, MAT 1040, PSY 1010, or an approved AH elective may be taken after graduation to improve GPA)
• Graduates of a non-college PN program must submit a program transcript
• Current PN students must have a GPA of at least 3.0 each term and proof of passing the PN NCLEX
• At least one letter of recommendation must be from someone in the nursing field

PN students attempting to complete courses for the ADN program may not enroll in spring or summer courses at any VSCS institution until their spring term is complete.

Additional Requirements for Nursing, Bachelor's Degree
• An unencumbered RN license

For non-VTC applicants, see Program Prerequisites.

Additional Requirements for Paramedicine Certificate
• Valid EMT license
• Letters of reference should be from ALS providers familiar with the applicant's character, abilities, and capability to succeed

Additional Requirements for Respiratory Therapy
Respiratory Therapy applicants must have 8 transferable credits in Anatomy & Physiology.

Nursing Direct Progression Policy
Qualified accepted PN or ADN students may progress directly to the next level nursing program at Vermont Tech without reapplying. See the Nursing pages for more information.

Nursing Policy for Criminal Background Checks & Drug Screening
To ensure the safety of all patients under the care of Vermont Tech nursing students and all faculty and students, all nursing students must have criminal background checks (CBCs) which include FBI fingerprinting. A CBC must be completed and reviewed prior to the first day of class. In the event that the student is admitted late, the CBC must be completed and reviewed prior to any clinical experience. Any student who fails to comply with this process is dropped from the program. The school uses the CBC for screening purposes and to secure clinical placements. In the event that there are positive findings (either convictions on the CBC or positive drug screen results at the sites that require them), the Associate Dean of Nursing and a member of the administration review all provided documentation and meet with the student to determine enrollment status. The student must provide a written explanation of all convictions and positive drug screens prior to this meeting. Court documents must be provided that detail the disposition of the case. Failure to do so results in dismissal from the program.

The student must report any convictions that occur after the CBC while enrolled in school.

A third-party vendor conducts the CBC and drug screens and maintains the records. Accepted students receive instructions on when and where to complete the CBC.
**International**

- Official secondary school and college/university transcripts (if applicable) with course-by-course evaluation by an international transcript evaluator
- Testing: official TOEFL score (if English isn't the first language) with a minimum score of 500 for paper, 173 for computer, or 61 for internet. IELTS with a recommended minimum score of 5.5 for engineering, health professions, and aviation and a minimum score of 5 for business, computer, construction, and plant or animal sciences. Pearson with a recommended score of 44 or higher
- Official financial statement on bank letterhead indicating ability to pay one full year of tuition, room, and board.
- A copy of the passport information page with complete name, date of birth, and countries of birth and citizenship

We encourage international students to apply between November and April due to the lengthy visa process. Upon acceptance, international students must submit a $300 deposit before we issue an I-20. The deposit is credited to the fall term bill.

**Graduate**

- Official transcripts from all colleges previously attended
- GRE results

**VAST**

- Official high school transcript with at least the first marking period grades of the junior year or a home school plan
- PSAT, SAT I, or ACT results
- Two letters of recommendation *(one from a teacher, one from a school counselor or principal)*
- Personal interview
- College-administered placement test
- Essay that addresses: what do you envision yourself doing ten years from now? How do you think attending the Academy will help you reach these goals? What can you contribute to the Vermont Tech community? A significant event in your life and how it has affected you

Entry into VAST is competitive. Applicants should have a strong academic transcript and one of three standardized tests with scores in the following ranges:

- PSAT/SAT scores of 500 for each subsection
- ACT scores of 21 for each subsection

VAST is recognized as an approved independent high school and awards diplomas. Because the state allows VAST students to transfer credits back to their sending high schools, students may receive a second high school diploma from that school.

A Vermont student’s general state support grant may be used to cover VAST tuition. Vermont Tech provides financial aid to residents for any gap between the state grant and tuition, enabling Vermon ters to attend VAST tuition-free. Other fees are the student’s responsibility.

Acceptance decisions are made by May 15. Available seats are filled on a rolling basis.

A student is eligible for a VAST diploma when they have a minimum of 2.0 GPA and meet the minimum number of credits as required by the state of Vermont.

VAST students must adhere to all policies and procedures outlined in the student handbook. Upon completion of the program, students may remain at Vermont Tech to complete a degree.

**Program Prerequisites**

For a complete list of program prerequisites and recommendations, visit our [website](#).

**Advance Standing**

Vermont Tech may grant advance standing in a degree program by transfer of courses from other accredited post-secondary institutions; advance placement or challenge exams; recognized equivalent military courses; or previous relevant experience.
Consideration of experience for credit is initiated by receipt of a completed academic portfolio by the Department Chair via the Office of Academic Affairs. If approved, the portfolio is forwarded to the Registrar with signatures of approval from the Department Chair, the credit-granting department, and the Academic Dean. The college may require a challenge exam.

Advanced standing toward a degree program is subject to the following restrictions:

- No more than 50% of the total required credits may be obtained by advanced standing for an associate degree or the +2 portion of a bachelor’s degree.
- No more than 50% of the total major technical course credits in an academic program may be obtained by advanced standing.

**Dual Enrollment**

Dual enrollment programs allow a student to take college courses while still in high school. Programs may be found at the home high school, a regional technical center, or a college campus.

**Placement Testing**

Some applicants may require placement tests in English and mathematics. Test results are used for course placement and admission purposes. If a student’s skills are below minimum levels, they must take developmental courses in appropriate areas. This results in additional coursework and longer overall enrollment. A student has the right to retest one time if they're dissatisfied with their original score.

A student who has completed a bachelor’s degree at a regionally accredited US college or university or has met the English and mathematics program requirements may be exempted.

**Deposits**

Accepted students must remit a tuition deposit of $200 by May 1 for the fall or December 15 for the spring. After these dates, we accept deposits on a space-available basis. The tuition deposit is credited toward the first term’s bill and is non-refundable after May 1.

If a student intends to live on campus, a $100 room deposit must be paid by May 1 (or within two weeks if accepted after May 1) with a completed Housing Contract. For returning students, room deposits are due in early April. Deposits are non-refundable after May 1. Housing deposits are placed in a holding account until the end of the spring term, at which time they’re placed on a student’s account and go toward any dorm damage fines that may be incurred. Any amount not used is refunded to the student at the end of May. If a balance remains on the student's account, the deposit is applied to the balance.

**Vermont Residency**

For Determination of In-State Residency for Tuition Purposes, see Policy 301.

Vermont Tech participates in the Regional Student Program (RSP) of the New England Board of Higher Education. Under this agreement, students from New England states pay 150% of the in-state tuition when they enter an eligible program under the RSP pact. A program not generally eligible because it's also offered in a student's home state may be eligible if the student’s legal residence is closer to Vermont Tech than to the home state institution. State eligibility is subject to change without notice. For a full list of eligible states and majors for both RSP and the Good Neighbor Policy, visit our website.

**Readmission & Reactivation**

You may apply for reactivation if:

- You've been a matriculated student within the last three years but haven't attended Vermont Tech for a year or more.
- You're a previously matriculated student who left while on probation or were academically dismissed within the last three years.

You may apply for readmission if:

- You're a previously matriculated student in Associate Degree Nursing, Practical Nursing,
Dental Hygiene, Respiratory Therapy, or Veterinary Technology and have been absent from the program for any length of time
• You applied within the previous two years but didn't matriculate (updated supporting documents may be requested)

To apply for reactivation or readmission, the applicant must complete a Readmission Application. Completion of this application doesn’t guarantee admission. Contact Admissions for more information and to determine eligibility.

A student who attended Vermont Tech within the last year doesn’t need to apply for readmission. They may contact their advisor or the Registrar’s Office for re-enrollment.

**Nursing Re-entry**
See the [Nursing Student Handbook](#).

**Respiratory Therapy Re-entry**
If an applicant wants to re-enter the Respiratory Therapy program after one term, they must perform a demonstration of all skills learned in the appropriate labs and clinical courses from the year before prior to re-entry. If the applicant is unable to perform these skills satisfactorily, they aren't readmitted to the program. Students who have been out of the program for more than a term must repeat all RSP courses in the program curriculum.

**Non-Degree Students**
A student who wishes to enroll in courses but not a degree program must meet all of the prerequisites for the courses and is subject to the same academic regulations and standards as a degree student.

Registration for courses is subject to availability, with initial priority given to degree students. Non-degree students register for classes through the Registrar. There's no online registration for non-degree students nor are they eligible for federal financial aid.

### Attendance & Assignment Requirements

Students must meet the attendance and assignment requirements set by each instructor for each class in which they’re enrolled. Failure to meet these requirements may result in removal from the class roster with a failing grade. In cases of excessive absences and upon the recommendation of the instructor, a student may be dismissed from the college with failing grades.
The make-up of any work missed for any reason is at the discretion of the instructor. Any time a
student misses a class, exam, lab, or other scheduled event, it's the student's responsibility to
inform the instructor and to make satisfactory arrangements for any make-up work.

Participation in varsity athletic contests may be considered excused absences, but practices
are not. Athletes are responsible for all work missed; the instructor and athlete will make every
reasonable effort to establish an acceptable make-up procedure. If no reasonable make-up
alternative is possible, academic standing has priority.

**Academic Advising**

Vermont Tech provides comprehensive advising to enrich the educational experience of every
student. Students have assigned academic advisors, usually within their program, and should
meet with their advisors throughout the year to discuss their progress and future plans.

Students who are having academic or personal difficulties may get extra help from faculty
advisors to identify problem areas; clarify educational and personal goals; resolve difficulties;
and obtain referrals to campus services such as the Center for Academic Success.

If students need to change advisors, they should contact the Office of the Registrar.

**Reporting Academic Concerns**

A student who wishes to report an academic incident should use the Academic Incident
Report form and return it to the Office of Academic Affairs. This form can be used to report
complaints, concerns, conflicts, and problems related to academics, courses, faculty, other
students, and academic facilities.

**Waiver of Courses**

A student may have a specific course waived by submitting an academic petition to the
Department Chair through the Dean of Academic Affairs. The petition must be approved
by the student's program department and by the department offering the course. A waived
course may be replaced by an alternative course.

**Class Level**

Class level is based on total earned credits toward an academic program. It affects financial
aid, class standing, and other calculations regarding student progression.

<table>
<thead>
<tr>
<th>Class Level</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Freshman</td>
<td>0-29.99</td>
</tr>
<tr>
<td>Sophomore</td>
<td>30-59.99</td>
</tr>
<tr>
<td>Junior</td>
<td>60-89.99</td>
</tr>
<tr>
<td>Senior</td>
<td>90+</td>
</tr>
</tbody>
</table>

Non-degree students have no class standing.

**Changing Programs**

If a student wishes to change programs, they must petition through the Office of the Registrar
and be approved by the appropriate Department Chair.

**Dual Major & Dual Degree**

A student who wishes to receive an additional degree or major must complete a Change of Program
request form, available from the Registrar. The student must complete all of the requirements of
the new major or degree without retaking completed courses. An additional associate degree
major must contain at least fifteen credits that weren't part of the previous major. An additional
bachelor's degree major must contain at least thirty credits that weren't part of the previous major.

Course schedules are designed for full-time students who are pursuing one major. Therefore, dual
majors typically require a minimum of one extra year at Vermont Tech.

A student who earns multiple majors is awarded one degree with the additional majors annotated
on the diploma.
Residency Requirement & Matriculation

A matriculated student is one who has been formally accepted by the college and registered in a degree program. All matriculated students have a minimum number of credit hours that must be taken at Vermont Tech. For bachelor’s candidates, the residency requirement is that 30 credit hours, including substantial advanced work in the major, must be achieved in courses specifically taken at a VSCS. For associate and certificate candidates, at least 15 credit hours must be achieved in courses taken specifically at Vermont Tech. For master’s candidates, at least 18 credit hours of coursework within the major must be completed at Vermont Tech. Exceptions to the residency requirement may be considered and require approval from the Academic Dean.

Tuition & Fees 2019-2020

Estimated Costs of Attendance

Students are responsible for familiarizing themselves with the cost descriptions; payment and refund policies; and the definition of residency for tuition payment purposes as detailed below.

In the following cost charts, all charges are based on full-time enrollment (12-19 credits per term) and are subject to change.

</tbody>
</table>

These fees are based on the average number of hours to complete a course. Additional hours may be required and are billed on an hourly basis until successful completion. All required courses must use full flight hours.

Some flight courses begin as 141 with an enrollment certificate. If a student receives sufficient training to complete the FAA check-ride with fewer hours, they can drop as 141 students and receive an FAA Part 61 check-ride to complete. Excess funding must be returned to the VA or the student’s account after financial scrutiny of fewer flight hours.

**FAA First Class Medical Examination & Drug Screening: $200**

Completed by an authorized aviation medical examiner and a copy submitted to the Program...
Director or Admissions by June 1.

FAA Written Exam Fees: $165 per exam
Six exams required during the program.

FAA Examiner Fees: $300-700 per check ride
Paid directly to the examiner before each oral and flight test for each certificate and rating.

Pilot Equipment: $1,700-2,000

Insurance: $314 per year
VFA carries liability and hull insurance and extends limited liability coverage to students, but students are responsible for the insurance deductible in the event of a loss. Each student must purchase an individual non-owner policy to cover student liability protection for legal defense; deductible and loss of use; and subrogation.

### Per Credit Tuition & Fees

Degree-seeking undergraduate students registered for 12-19 credit hours are considered full-time. Overload fees apply to class loads of 20+ credit hours and are billed at the rates below.

Degree-seeking students registered for fewer than 12 credit hours are considered part-time and are charged on a per credit basis at the rates below.

Non-degree students are charged for all credits.

**Senior Citizen Discount**

Any student aged 65 or older may audit one VSCS course per enrollment period without tuition charge. Additional courses may be taken without limitation, up to and including completion of a certificate or undergraduate degree, at the rate of 50% of the charged tuition. These students may not take the place of tuition-paying students in courses with enrollment limits. All applicable fees are the responsibility of the student.

**Fee Descriptions**

**Application Fee: $50**

**Challenge Exam Fee: $155 per exam**

Required when students take challenge exams for college credit or advanced standing.

**Course Fee**

Offsets the cost of special projects or equipment for specific courses.

**Deferred Payment Fee: $58 per term**

Charged when term charges are deferred because an outside source is providing direct payment past the normal due date.

**Facilities Fee: up to $435 per term**

Charged to all matriculated students and prorated per credit hour for part-time students; supports development of new facilities on the residential campuses.

**Graduation Fee: $104 per degree**

Charged for each degree a student receives regardless of whether they participate in a graduation ceremony. Typically charged when they submit a graduation application, but can be charged after the ceremony. A student who doesn't meet graduation participation requirements will be removed from the list and the graduation fee removed.

**Health Insurance Fee: $1,977 per year**

Mandatory for all full-time students not otherwise covered. For exemption, present written proof of coverage and complete the Student Waiver for the VSCS Student Health Insurance Plan in Web Services. Students failing to submit the online form by the published deadline are automatically enrolled in and billed for the VSCS health plan.

**Institutional Lab Fee: $80 per lab credit hour**

Required to offset the cost of instruction in labs, studios, clinicals, activities, and practica.

**Late Financial Clearance Fee: $139**

Charged to students who haven't paid or provided proof of future payment. Financial holds and this fee activate approximately 30 days into each term.

**Matriculation Fee: $415**

A one-time charge to all matriculated students in the first enrolled term.

**Online Support Fee: $251**

To provide support infrastructure for students in online programs.

**Portfolio Assessment Fee: $50 per portfolio**

**Registration Fee: $76 per term**

For non-degree students.
Returned Payment Fee: $25
For any payment that's returned to the Student Accounts Office by the banking institution for insufficient funds, invalid accounts, etc. For returned checks that were received for cash, we won't accept any subsequent checks.

Safety & Security Fee: $43 per term
Charged to all matriculated students to ensure a safe and healthy learning environment.

Student Activity Fee: up to $148 per term
Covers the expense of student clubs, activities, and admission to most campus events such as concerts, dramatic productions, films, lectures, and recreational and social activities.

Transcript Fee: $6.50 per copy

Textbooks, Supplies, & Other Expenses
The cost of textbooks and supplies varies by program, but is typically around $800 per term. Upon approval, students who have financial aid to cover expenses plus books can charge books to their student accounts 30 days prior to the start of each term.

College students incur a variety of other expenses (travel, social activities, laundry, etc.) The college estimates these cost about $1,650 per year.

Payment Authorization
Students can authorize anyone they choose to access, log in, view, and/or make a payment on their account via the web.

Payment Plans
Fall plans are available online through Self Service beginning June 1 or when billed. You must have a login ID, a password, and a billing statement to access this service.

We offer five convenient in-house plans for fall (see Student Accounts for other semester plans):
• Six payments from June through November
• Five payments from July through November
• Four payments from August through November
• Three payments from September through November
• Two payments from October through November

There's a $30 enrollment fee and a down-payment required when signing up based on the option chosen. Monthly payments are due on the fifteenth of each month and a $15 late fee is incurred for payments not made by the due date. Term balances must be paid in full prior to enrolling in future terms. A new payment plan must be set up each term.

As a condition of enrollment, students must provide payment in full or proof of how all term charges will be paid within 30 days of billing. Fall billing begins on or around June 1.

Veterans who are certified as eligible for the GI Educational Assistance allowance are permitted to register upon signing an approved payment plan with the business office.

Employer payments requiring final grades can be deferred. Please contact the business office for more information and eligibility requirements.

Financial delinquency may serve as a basis for dismissal. Financially delinquent students are denied enrollment for subsequent terms; issuance of grades or transcripts; or graduation. Reasonable interest and collection costs may be added to delinquent accounts.

Reductions for Withdrawal & Financial Aid Refunds
If a student withdraws or is dismissed before the 60% point of the term, they're credited tuition, applicable fees, and room and board on a prorated basis. The date of withdrawal or dismissal is determined by the Office of the Registrar. The prorated calculation uses the number of calendar days completed divided by the number of total calendar days included for the full term.

If a student receives financial aid, credit received is first applied to financial aid sources. Federal regulations are used for return of Title IV funds and individual state, college, or
outside scholarship policies for return of non-Title IV funds. Because financial aid funds must be used for educational expenses, when a student who's receiving financial aid for non-institutional costs withdraws from the college, a portion of this aid must be repaid. The order of distribution for the return of Title IV funds is as follows:

1. Unsubsidized FFEL/Direct Stafford Loan
2. Subsidized FFEL/Direct Stafford Loan
3. Perkins Loan
4. FFEL/Direct PLUS Loan
5. Pell Grant
6. FSEOG
7. Other Title IV programs

Other Credits

Board charges are credited for each full week of extended illness or authorized absence. There's no credit of room charges for students suspended or dismissed from on-campus housing.

Financial Aid

All federal funds at Vermont Tech are awarded on the basis of financial need. All students who apply for financial aid by the March 1 priority deadline and who are eligible for assistance are offered financial aid, subject to availability of funds. The amount of any award is determined by the amount of student need as computed from information provided by the family on the Free Application for Federal Student Aid (FAFSA). Students may apply for financial aid by filling out a [FAFSA](https://www.fafsa.gov) online. Federal regulations mandate that a needs analysis be completed for anyone who applies for federal financial aid. It's important to file the FAFSA as early as possible to avoid delays in processing loan applications and other forms of campus-based aid. After March 1, late applicants are considered for aid only after we process all on-time applications.

Vermont residents should also complete the Vermont Grant Application through [VSAC](https://www.vsac.org). Non-residents should check with their home state higher education agency for grant information.

Students selected for verification must submit additional information and we send a tracking letter accordingly. The Office of Financial Aid uses imaging to maintain and track documentation sent to the office and all originals are shredded.

All FAFSA applicants and parents of dependents who indicate that they have filed or will file a federal tax return use the IRS Data Retrieval Tool to report or update their income information on the FAFSA.

Expected Family Contribution

Financial aid at Vermont Tech is based on the assumption that a student’s family will make the maximum effort to finance college expenses. Since there are many more demands on Vermont Tech’s financial aid resources than the college can possibly meet, assistance is viewed as supplemental to this family obligation. Applicants can expect that a fair portion of their personal savings at the time of each year’s application will be applied to college expenses.

The needs analysis system evaluates the requested information and determines a reasonable contribution that can be expected from the student and their family. Unless there are extenuating circumstances, the Office of Financial Aid is required to use this expected family contribution in determining a student's need for aid. If family financial circumstances change significantly after filing the FAFSA (due to loss of employment, extended illness, disability, etc.), the family should write to the Office of Financial Aid as soon as possible outlining this change.

For the purpose of application, income is defined as wages, salary, tips, interest accrued, dividends, pensions, welfare, social security, or any other form of income. Deductions against income are made for taxes and there’s an employment allowance for parents working outside the home, as well as an income protection allowance that's based upon family size and the total number of family members in college.
Sources of Financial Aid

When you file a FAFSA, you're applying for the following federal, state, and college aid programs and establishing eligibility for a Federal Direct Loan.

**Federal**

The **Federal Pell Grant Program** is an entitlement program. This means that all eligible students receive awards. Eligibility is determined by the family’s and the student’s financial resources.

**Federal Direct Loans** (subsidized and unsubsidized) are available to qualified students. A subsidized loan is awarded on the basis of financial need and the federal government pays interest on the loan until the student begins repayment and during authorized periods of deferment. The student pays the interest on an unsubsidized loan while enrolled on at least a half-time basis.

If you’re a dependent undergraduate student, you can borrow up to:
- $3,500 if you're a first-year student enrolled in a program of study that's at least a full academic year.
- $4,500 if you've completed your first year of study and the remainder of your program is at least a full academic year
- $5,500 per year if you've completed two years of study, are matriculated in a bachelor's degree program, and the remainder of your program is at least a full academic year

Additional unsubsidized Direct loan limits may be increased by $2,000 for loans first disbursed after July 1, 2008.

Independent undergraduate students may borrow an additional amount up to $4,000-5,000 per year, depending on their year of study. However, students in the unsubsidized loan program can’t borrow more than the cost of attendance minus any other financial aid for which they're eligible.

Both subsidized and unsubsidized loan eligibility amounts are outlined on a student’s award letter.

All Federal Direct and PLUS loans are processed through the Federal Direct Loans Program (Direct Loans). Direct Loans provides Parent PLUS loans to parents of dependent undergraduate students through the school, funded directly by the government.

**PLUS Loans** enable parents with good credit histories to borrow for each dependent student who is enrolled at least half-time. Parents who wish to apply must fill out a PLUS Loan Request Form, which is available through the Office of Financial Aid. A request form is automatically mailed with financial aid award notification letters. The yearly limit on a PLUS Loan is the cost of attendance minus any other financial aid for which a student is eligible.

**150% Rule for Subsidized Loans**

On July 6, 2012, the Moving Ahead for Progress in the 21st Century Act (MAP-21) (Public Law 112-141) was enacted and limits a first-time borrower’s eligibility for Direct Subsidized Loans to a period not to exceed 150% of the length of the borrower’s education program. In the summer of 2013, final regulations were completed. This legislation was enacted to encourage students to obtain their degrees within a reasonable time frame.

First-time borrowers on or after July 1, 2013 are subject to the provisions in this legislation. Generally speaking, a first-time borrower is one who didn't have an outstanding balance of principal or interest on a Direct Loan or FFEL loan on July 1, 2013.

Federal regulations limit the time period during which you can receive Direct Subsidized loans to 150% of the standard length of the program in which you're enrolled. For example, for a bachelor’s degree program that is normally completed in four years attending full-time, borrowers can receive subsidized loans for a maximum of six years ($150% \times 4 = 6$). The period is reduced for less than full-time study. Once you've received direct subsidized loans for your maximum eligibility period, you may continue to receive direct unsubsidized loans and your subsidized loans may begin to accrue interest.

**Federal Aid Programs Administered by the College**

The **Federal Supplemental Education Opportunity Grant** (FSEOG) is a gift of money to assist
students with the cost of their education. It's restricted to undergraduates and doesn't require repayment. The maximum amount awarded is $4,000, depending on a student's need and the availability of funds at Vermont Tech. Average grants range from $600 to $1,600 per year. Students who are eligible for Pell grants have first consideration for this fund.

The Federal Work-Study Program (FWS) is a federal work program administered by Vermont Tech which provides jobs for students on or off campus. Average awards range from $1,200 to $1,600 for the year, which translates to approximately 10-14 hours of work per week. Students may also use FWS funds for off-campus non-profit community service placements. Federal Work-Study earnings aren't credited on a student's bill. Instead, the student worker receives a paycheck every two weeks.

State
Vermont Incentive Grants are awarded on the basis of financial need. Any full-time undergraduate Vermont resident who plans to attend or is enrolled in an approved post-secondary institution and who has not already received a bachelor’s degree is eligible to apply. Students are required to file supplemental information with VSAC to be considered for a Vermont state grant.

Other states, including Maine, Rhode Island, Connecticut, and Massachusetts, offer undergraduate grants or scholarships usable at Vermont Tech. All students eligible for these grants should apply for them. Contact the Office of Financial Aid or your high school guidance office to find out which states require supplemental information.

Veterans' Education Benefits
Veterans planning to attend Vermont Tech using the GI Bill® should indicate this on their admissions application.

Please visit the GI Bill® website and complete the VA form that applies:
- 22-1990 if you have served in the military and are applying for education benefits for the first time
- 22-199E if you are a dependent using a spouse's or parent's post-9/11 GI Bill® benefits
- 22-1995 if you are a veteran who is changing schools
- 22-5490 if you are a dependent (child or spouse) of a deceased or 100% disabled veteran and are applying for benefits for the first time
- 22-5495 if you are a dependent who is changing schools

After the VA processes an application, they send a certificate of eligibility letter to the applicant, which the applicant should forward to:

Vermont Technical College
Attn.: Veterans' Certifying Official
PO Box 500
Randolph Center, VT 05061

Once eligibility is established, student enrollment is certified with the VA. Veterans must submit a request for certification prior to the start of classes every term. If a student doesn't want to be certified or is no longer eligible for VA benefits, they must notify the school certifying official.

Veterans need to be prepared to purchase books and have living expenses for the first four to six weeks of classes. The initial payments can be slow, but are retroactive to the start of the term once they begin.

Veterans must submit a request for enrollment certification each time they register for classes. The VA determines the BAH rate. The VA calculates MHA based on the location of the campus where the student physically attends a majority of their classes.

The Vermont National Guard State Educational Assistance Program provides tuition assistance to eligible members of the Vermont National Guard who are enrolled in undergraduate degree and diploma programs at public colleges in Vermont.
Other Financial Aid Sources

Scholarships are available to students who meet the criteria set for each. Contact the Office of Financial Aid for information about scholarships appropriate to your situation.

Vermont Tech also has institutional grants which are awarded based on financial need or merit. Financial need is determined using the same criteria used for awarding campus-based aid. The maximum amount awarded depends upon the availability of funds and student need.

Satisfactory Academic Progress (SAP)

Federal statutes and regulations require that recipients of federal financial aid must progress at a pace to ensure degree completion within the maximum time frame allowed and must be in good standing based on cumulative GPA requirements.

Students are reviewed on a term basis. Students not making SAP (either the pace or the GPA requirement) as described below lose their financial aid eligibility for all aid types. Students have to successfully appeal to the Director of Financial Aid in order to continue to receive Title IV aid despite failing SAP standards. Students who are academically dismissed from their programs are automatically recognized as failing to meet SAP standards.

All terms in which a student is enrolled, including periods in which the student didn't receive federal student aid funds, must be considered in the determination of SAP.

1. Pace/Time Progression  Students must successfully complete 67% of their attempted courses within the VSCS as recorded and documented by the Office of the Registrar. Dropped courses aren't included. Courses from which the student withdraws after the end of the add/drop period are counted toward attempted courses. For financial aid eligibility, total hours attempted, including transfer credits counted toward the degree, can't exceed 150% of graduation requirements. As an example, if you attempt/enroll in 12 credits for one semester, you must successfully complete 8 of those 12 credits (12 x 67% = 8).

2. GPA Requirement  Students with fewer than 30 attempted credits must maintain a cumulative GPA of 1.75. Students with 30 attempted credits or greater must maintain a cumulative GPA of 2.00 as documented by the Registrar.

3. Maximum Time Frame  The maximum time frame for a student to complete their academic program may not exceed 150% of the published length of the program, measured in credit hours. As an example, if an associate degree program requires 68 credits, the maximum time frame allowed to complete the program would be 102 credits* (68 x 150% = 102).

*Different programs have different degree requirements. Students who have reached the maximum time frame aren't eligible for federal financial aid.

Appeal Process

An appeal is the process by which a student who isn't meeting Vermont Tech's SAP standards can petition the school for reconsideration of Title IV eligibility.

An appeal form is sent to each student not making SAP. The form explains how the student has failed to meet SAP and the steps to appeal the loss of financial aid. To appeal, students complete the form and submit it, along with all supporting documentation, to the Director of Financial Aid. As part of the appeal, the student must include information regarding why they failed to make SAP and what has changed in their situation that would allow the student to demonstrate SAP at the next evaluation. An appeal must be based on significant mitigating circumstances that seriously impacted academic performance. Examples of mitigating circumstances are: serious illness, severe injury, death of a family member, and other similar situations.

Approval is based on the likelihood that the student will meet SAP at the next review. Please note that merely filing an appeal doesn't guarantee continued eligibility for federal aid. Students should make every effort to improve their SAP standing, as they're limited to two SAP appeals.

If a student's appeal is approved, the student is considered for federal aid during the probationary periods for which the student has applied and is otherwise eligible. Once the probationary period has concluded, the student may re-establish eligibility for federal aid for a subsequent term by meeting SAP standards.
Financial Aid Probation: a status assigned to a student who fails to meet SAP who has appealed and has had eligibility for aid reinstated

Financial Aid Warning: a status assigned to a student who fails to make SAP. The student may continue to receive Title IV aid for one payment period. Students receive a warning that they need to bring their academic standing up to satisfy academic progress standards in their following term as outlined or they lose their eligibility for aid. No appeal is necessary for this status.

Appeal Denial: if an appeal for federal financial aid is denied, the decision is final for that term. The student may re-establish eligibility for federal aid for a subsequent term by taking action to comply with the GPA and pace/time progression components of SAP policy standards.

Special Circumstances
Students with documented disabilities may be allotted additional time for completion of courses.

Change in Degree Program
All credits earned at Vermont Tech plus transfer credits are normally counted when the student changes degree programs. Each case is evaluated on its own merit. Students may not extend their period of enrollment by changing their majors after accumulating maximum credits for a program.

Grades & Credits
Courses with grades of W (withdrawn), I (incomplete), or F (failed) are counted as courses attempted but not earned and are also counted toward the maximum time frame.

Credits earned for repeated courses and remedial coursework don’t count toward academic progress. Courses graded solely on a pass/fail basis that are accepted toward the academic program are included when measuring academic progress.

Transfer credits accepted toward the student’s academic program or degree count as both attempted and earned credits and are counted when measuring SAP, but don’t impact GPA.

Review of Awards
The Director of Financial Aid reserves the privilege of reviewing and revising awards. Therefore, the applicant should notify the Office of Financial Aid immediately if there’s a change in either the student’s or the family’s financial situation. This includes the receipt of non-college scholarships. Financial aid awards may be adjusted upon receipt of such items as family contributions, grants, outside scholarships, and loans. Eligibility for financial aid depends on such resources not exceeding the total costs of attending VTC.

If a student receives an outside scholarship that the college doesn't know about at the time an award letter is prepared, they’re issued a revised award reflecting an adjustment to avoid an over-award situation. Any initial adjustment is reflected in unmet need, then self-help (loan and work) before the gift aid portion of the financial aid package is adjusted.

Most financial aid awards are based originally upon the assumption that a student will enroll as a full-time student (12 or more credits per term) unless they have notified us to the contrary. If a student changes status from full- to part-time enrollment, an aid adjustment may result. A review of enrollment status is completed each term at the end of the add/drop period; any aid adjustments are made accordingly.

Notice of Federal Student Financial Aid Penalties for Drug Law Violations
Per Federal Financial Aid Regulations 34 CFR 668.40, HEAO Sec. 486(g), amended HEA Sec. 485 (20 U.S.C. 1092), HEA Sec. 485(k)

In compliance with the above regulation, this statement serves as notice that a student who has a drug conviction for any offense during a period of enrollment for which the student was receiving Title IV HEA program funds (Federal Pell, Supplemental Education Opportunity Grant, Federal Work-Study, Federal Perkins Loan, Federal Stafford Loans, Federal PLUS Loans, Federal Grad PLUS Loans) under any federal or state law involving the possession or sale of illegal drugs will result in the loss of eligibility for any Title IV program funds.
A student with an Associate of Applied Science in Agribusiness Management will be able to:

1. Apply knowledge of concentrated agribusiness industries to effectively and professionally communicate technical information in writing, speaking, listening, and interpersonal skills to work as part of a team and interact with clients, the public, and industry professionals.
2. Apply knowledge of general agribusiness science and technology to concentrated agribusiness industry problems that require the application of principles and applied procedures or methodologies.
3. Understand the income and expenses of concentrated agribusiness.
4. Prepare and assess agricultural business plans.
5. Competently represent the vocation of agriculture.
6. Combine knowledge of concentrated agriculture industries with practical aspects of organizing and managing a small business, marketing, applying accepted practices, managing agricultural business operation budgets, and writing a business plan for concentrated agricultural operations.

The minimum number of credits required for the degree is 65.

Dairy Farm Management (AAS)

A student with an Associate of Applied Science in Dairy Farm Management will be able to:

1. Apply knowledge of the dairy industry to effectively and professionally communicate technical information in writing, speaking, listening, and interpersonal skills to work as part of a team and interact with clients, the public, and industry professionals
2. Apply knowledge of dairy science and technology to dairy industry problems that require extensive practical knowledge
3. Understand dairy cow nutrition and ration evaluation
4. Understand dairy reproduction and breeding systems
5. Understand heifer-raising
6. Manage dairy cow transition from dry to lactating
7. Understand forage production and management
8. Understand dairy operation budgeting
9. Combine knowledge of the dairy industry with practical aspects of organizing and managing a small business, marketing, applying accepted accounting practices, managing a dairy operation budget, and writing a business plan for a dairy operation

The minimum number of credits required for the degree is 63.

Diversified Agriculture (BS)

A student with a Bachelor of Science in Diversified Agriculture will be able to:

1. Effectively and professionally communicate technical information in writing, speaking, listening, and interpersonal skills to work as part of a team and interact with clients, the public, and industry professionals
2. Apply knowledge of agricultural science and technology to industry problems that require the application of applied procedures or methodologies
3. Analyze livestock nutrition and ration evaluation
4. Design, plan, and implement healthy plant environments
5. Create and analyze a nutrient management plan
6. Analyze the operational details of various New England agricultural industries
7. Combine knowledge of agricultural industries with organizing and managing a small business, marketing, accepted accounting practices and operation budgeting, assessing operations, and writing a business plan for an agricultural operation

The minimum number of credits required for the degree is 122.

Forestry (AAS)

A student with an Associate of Applied Science in Forestry will be able to:

1. Apply knowledge of the forestry and logging industries to effectively and professionally communicate technical information in writing, speaking, listening, and interpersonal skills to work as part of a team and interact with clients, the public, and industry professionals
2. Apply knowledge of timber science and technology to forestry and logging industry problems that require extensive practical knowledge
3. Demonstrate familiarity with tree identification; functions of a forest ecosystem; natural community and site indicator species identification; forestry inventory data collection; mapping skills; operation of a chainsaw and sawmill; maple management and production; and timber harvesting techniques
4. Create a forest management plan
5. Combine knowledge of the forestry and logging industries with practical aspects of organizing and managing a small business; marketing, applying accepted accounting practices; managing a forestry or logging operation budget; and writing business plans for forestry or logging operations

The minimum number of credits required for the degree is 64.

**Landscape Contracting (AAS)**

A student with an Associate of Applied Science in Landscape Contracting will be able to:

1. **Graphic Communication Skills:** Demonstrate an appropriate mastery of freehand sketching, board drafting, and presentation graphics for the formulation, exploration, and communication of design ideas

2. **Communication Skills:**
   a. Demonstrate a high level of ability to communicate technical and theoretical information through both the written and spoken word
   b. Demonstrate a high-level ability to verbally communicate design ideas effectively to clients and jury

3. **Technical Skills:**
   a. Demonstrate an appropriate mastery of the materials and methods of construction
   b. Create plans for the installation, operation, and maintenance of greenhouse and nursery environmental systems

4. **Design Skills:**
   a. Demonstrate an appropriate mastery of fundamental design principles, theory, and practice
   b. Perform cost estimates related to design and construction

5. **Horticultural Skills:**
   a. Demonstrate an appropriate mastery of the identification of woody ornamental plants
   b. Demonstrate an appropriate mastery of the identification of herbaceous ornamental plants
   c. Explain the concepts and techniques of integrated pest management and use that knowledge to make management recommendations
   d. Demonstrate an appropriate mastery of the propagation and production of herbaceous and woody ornamental plants
   e. Demonstrate a comprehensive understanding of soils and their properties as they apply to the landscape industry
   f. Demonstrate an appropriate mastery of landscape applications such as plant selection, cultural requirements, cultural practices, and maintenance

6. **Business Skills:**
   a. Demonstrate the ability to examine and analyze the practical aspects of organizing and managing a small business
   b. Create contract proposals (short form and long form) that protect the interests of the contract and client
   c. Write solid specifications that lay out the responsibilities of all participating parties
   d. Demonstrate the principles of professional conduct in all aspects of client/customer and employee/employer relations

The minimum number of credits required for the degree is 62.

Veterinary Technology

**Veterinary Technology (AAS)**

A student with an Associate of Applied Science in Veterinary Technology will be able to:

1. Demonstrate competence in veterinary facility management utilizing appropriate professional and client communication skills and maintaining ethical standards according to applicable laws and codes of the veterinary technology field
2. Exhibit a technical level of competency in the safe and effective preparation, administration, and dispensation of medications (including controlled drugs) using proper dosage calculations, labeling, and record-keeping
3. Demonstrate entry-level skills in patient nursing care for both companion and food animals including husbandry; nutrition; restraint techniques; patient data and sample collection; administration of therapeutics; and basic dental prophylaxis
4. Safely and effectively manage patients and associated equipment in all phases of anesthetic procedures
5. Integrate all aspects of patient, environment, and equipment management for common surgical procedures in a variety of animal species
6. Handle, store, ship, and properly analyze lab specimens
7. Safely and effectively produce diagnostic radiographic and non-radiographic images and operate and maintain the associated equipment
8. Safely and effectively handle and provide care for lab, avian, and exotic animals

Students must adhere to the policies and procedures in the program's student handbook including safety issues related to pregnancy, immunizations, and substance abuse. Vet Tech students should receive human prophylactic rabies vaccine, which is available through the college in the fall term at the students' expense.

The student must satisfactorily complete all AVMA-required tasks for each course to receive a grade in that course. BIO 2320 and all VET courses must be completed with a grade of C or better to graduate. Any student who fails to achieve a C or better in any core VET/BIO course after two attempts is dropped from the program. Returning students who need to repeat courses are placed in them as space is available.

The minimum number of credits required for the degree is 64.

*Must be taken at least once; may be repeated for credit*
School of Engineering & Computing
Computer Science Advanced Certificates

These certificates are designed for the student who has already earned a degree from an accredited institution and would like to obtain higher-level skills. A student pursuing these certificates should have prior academic work or equivalent work experience.

To earn a certificate, a student must maintain a cumulative GPA for the entire certificate of at least 3.0. Courses in which the final grade is below a C don't count toward the certificate, but with permission from the host department, a subsequent course may be substituted. For a student with a particularly strong background, up to two courses may be waived with permission.

**Advanced Software Development (AC)**

A student with a certificate in Advanced Computer Software Development will be able to:

1. Develop and deploy high-quality, large-scale software systems
2. Understand the concepts and practice of relational databases
3. Demonstrate technical depth in an area approved by the Department Chair

The minimum number of credits required for the certificate is 19.

**First Year**

**Computer Networking (AC)**

A student with a certificate in Computer Networking will be able to:

1. Understand the design and implementation of computer networking
2. Manage systems including UNIX-based computers
3. Design and architect systems that utilize computer networking
4. Demonstrate technical depth in an area approved by the Department Chair

The minimum number of credits required for the certificate is 20.

**Cybersecurity (AC)**

A student with a certificate in Cybersecurity will be able to:

1. Understand the concepts and applications of security algorithms and protocols
2. Design information systems that are resistant to internal and external threats and verify the design’s effectiveness
3. Understand the concept of intrusion detection and forensic analysis
4. Understand laws, regulations, policies, and ethics as they relate to cybersecurity
5. Understand current and emerging threats and threat vectors at the strategic and operational levels

The minimum number of credits required for the certificate is 19.

### Computer Science Advanced Certificates
Architectural & Building Engineering Technology (AAS)

A student with an Associate of Applied Science in Architectural & Building Engineering Technology will be able to:

1. Select and apply the knowledge, techniques, skills, and modern tools of the discipline to narrowly defined engineering technology activities
2. Apply a knowledge of mathematics, science, engineering, and technology to engineering technology problems that require limited application of principles but extensive practical knowledge
3. Conduct standard tests and measurements and conduct, analyze, and interpret experiments
4. Function effectively as a member of a technical team
5. Identify, analyze, and solve narrowly defined engineering technology problems
6. Apply written, oral, and graphical communication in both technical and non-technical environments and identify and use appropriate technical literature
7. Understand the need for and engage in self-directed continuing professional development
8. Understand and demonstrate a commitment to address professional and ethical responsibilities, including a respect for diversity
9. Commit to quality, timeliness, and continuous improvement
10. Employ concepts of architectural theory and design in a design environment
11. Use instruments, methods, software, and techniques that are appropriate to produce A/E documents and presentations
12. Use measuring methods that are appropriate for field, office, or laboratory
13. Apply fundamental computational methods and elementary analytical techniques in sub-disciplines related to architectural engineering

Educational objectives that are demonstrated during their workforce careers include:

- **Graphic communication skills**: use freehand sketches and drawing, presentation graphics, and CAD as tools for design and communication
- **Communication skills**: communicate technical information in writing, speaking, listening, and interpersonal skills to work effectively as part of a team and to interact effectively with clients, the public, and others
- **Technical skills**: understand residential and commercial building systems, materials, and regulations; apply that knowledge to site layout and material estimating; and use appropriate computer applications
- **Architectural design skills**: demonstrate knowledge of historical precedents and aesthetics and use design principles (including energy use, conservation, and sustainability concepts) as part of a process to create workable building designs
- **Engineering design skills**: understand design principles and apply procedures in the design of building engineering systems in the areas of building structures; heating, ventilation, and air conditioning (HVAC); plumbing; electrical; and lighting with emphasis on energy use, conservation, and sustainability concepts

The program is accredited by the Engineering Technology Accreditation Commission of ABET, [http://www.abet.org](http://www.abet.org).

The minimum number of credits required for the degree is 65.

Architectural Engineering Technology (BS)

In addition to the student outcomes included in the architectural or civil engineering associate programs, a student with a Bachelor of Science in Architectural Engineering Technology will be able to:

1. Select and apply the knowledge, techniques, skills, and modern tools of the discipline to broadly defined engineering technology activities
2. Select and apply a knowledge of mathematics, science, engineering, and technology to engineering technology problems that require the application of principles and applied procedures or methodologies
3. Conduct standard tests and measurements; conduct, analyze, and interpret experiments; and apply experimental results to improve processes
4. Design systems, components, or processes for broadly defined engineering technology problems appropriate to program educational objectives
5. Function effectively as a member or leader of a technical team
6. Identify, analyze, and solve broadly defined engineering technology problems
7. Apply written, oral, and graphical communication in both technical and non-technical environments and identify and use appropriate technical literature
8. Demonstrate a knowledge of the impact of engineering technology solutions in a societal and global context
9. Demonstrate a commitment to quality, timeliness, and continuous improvement
10. Create, utilize, and present design, construction, and operations documents
11. Perform economic analyses and cost estimates related to design, construction, and maintenance of building systems
12. Select appropriate materials and practices for building construction

Educational objectives that are demonstrated during their workforce careers include:

- **Technical design skills**: design and integrate complex systems into the building form; emphasize human comfort and resource conservation; incorporate expertise in a single engineering discipline
- **Communication skills**: use computer-aided design and drafting to communicate complex building systems; exhibit expanded oral presentation skills to effectively explain technical designs; demonstrate improved interpersonal skills for team efforts and for interacting with clients, the public, and others
- **Structural engineering design skills**: use principles and procedures to analyze and design structures in wood, steel, concrete, and other materials while addressing sustainability issues
- **Mechanical engineering design skills (HVAC and plumbing systems)**: use principles and procedures to analyze and design building mechanical systems, including the use of energy conservation and sustainability concepts
- **Electrical and lighting engineering design skills**: use principles and procedures to analyze and design energy-efficient building electrical and lighting systems
- **Engineering management skills**: understand and apply the principles of management for engineering business and project administration

The program is accredited by the Engineering Technology Accreditation Commission of ABET, http://www.abet.org.

The minimum number of credits required for the degree is 124.

Civil & Environmental Engineering Technology (AE)

Any student completing this program can continue for a 2+2 bachelor’s degree in Architectural Engineering Technology, Business Technology & Management, Construction Management, or Renewable Energy.

A student with an Associate of Engineering in Civil & Environmental Engineering Technology will be able to:

1. Apply the knowledge, techniques, skills, and modern tools of the discipline to narrowly defined engineering technology activities
2. Apply knowledge of mathematics, science, engineering, and technology to engineering technology problems that require limited applications of principles but extensive practical knowledge
3. Conduct standard tests and measurements and conduct, analyze, and interpret experiments
4. Function effectively as a member of a technical team
5. Identify, analyze, and solve narrowly defined engineering technology problems
6. Apply principals of biology, chemistry, and physics to engineering activities
7. Apply written, oral, and graphical communication in both technical and non-technical environments and identify and use appropriate technical literature
8. Understand the need for and possess an ability to engage in self-directed continuing professional development
9. Understand and commit to addressing professional and ethical responsibilities, including a respect for diversity
10. Commit to quality, timeliness, and continuous improvement

Educational objectives that are demonstrated during their workforce careers include:

• **Communication skills**: communicate technical information in writing, speaking, listening, and interpersonal skills to work effectively as part of a team in the workforce

• **Technical skills**: understand the principles of storm water, hydraulics, environmental engineering, surveying, soils, engineering structures, wastewater, water/wastewater treatment, and engineering materials; estimate quantities; and use appropriate computer applications to apply that knowledge as a consultant in the workforce

• **Professional skills**: perform in the workforce with confidence in the use of CAD software; create site plans from raw survey data; design sewage disposal systems; and develop profiles and cross-sections for highway design

• **Engineering design skills**: understand design principles and function actively as part of a design team in the workforce with acquired skills and the knowledge of building materials and structures, site development, and estimating quantities

• **Innovation skills**: demonstrate the skills and ability needed to continue learning through formal education or adapt to changing technologies in the workplace

The program is accredited by the Engineering Technology Accreditation Commission of ABET, [http://www.abet.org](http://www.abet.org).

The minimum number of credits required for the degree is 65.

Computer Engineering Technology (AE)

A student with an Associate of Engineering in Computer Engineering Technology will be able to:

1. Apply the knowledge, techniques, skills, and modern tools of mathematics, science, engineering, and technology to solve narrowly defined engineering problems appropriate to the discipline
2. Design solutions for narrowly defined technical problems and assist with the engineering design of systems, components, or processes appropriate to the discipline
3. Apply written, oral, and graphical communication in narrowly defined technical and non-technical environments; identify and use appropriate technical literature
4. Conduct standard tests, measurements, and experiments related to the discipline and interpret the results to improve processes
5. Function effectively as a member of a technical team

Educational objectives that are demonstrated during their workforce careers include:

- **Professional skills:** be immediately employable and productive in the workplace
- **Engineering management skills:** possess qualifications for positions of responsibility based on knowledge of necessary skills
- **Engineering skills:** demonstrate knowledge in both theory and application
- **Innovation skills:** engage in lifelong learning; adapt to new and emerging technologies; and continue their formal education

The program is accredited by the Engineering Technology Accreditation Commission of ABET, http://www.abet.org.

The minimum number of credits required for the degree is 68.

# Computer Information Technology (AS)

A student with an Associate of Science in Computer Information Technology will be able to:

1. Demonstrate fluency in multiple programming languages
2. Develop and manage complete websites
3. Understand the design and implementation of computer networking
4. Understand basic principles for developing and deploying high quality software systems
5. Manage systems, including UNIX-based computers
6. Demonstrate a solid background in business processes
7. Understand the historical and social context of information technology

The minimum number of credits required for the degree is 61.

Computer Information Technology (BS)

In addition to the student outcomes included in the associate program, a student with a Bachelor of Science in Computer Information Technology will be able to:

1. Design and architect systems that utilize computer networking
2. Understand the requirements for developing and deploying high-quality, large-scale software systems
3. Design, implement, and evaluate a user interface for a computer system
4. Understand the concepts and practice of relational databases
5. Understand the security issues surrounding information technology and the appropriate tools and techniques to safeguard that security
6. Understand the professional, historical, and social context of information technology and make reasoned judgments about the social and ethical implications of their actions

All students actively participate in the design, development, and evaluation of a sizable information technology system and present the results of that effort.

The student, in conjunction with the Department Chair, may develop a sequence of courses to best meet their background and needs that still satisfies the degree requirements. A typical curriculum is shown here.

The minimum number of credits required for the degree is 120.

**Minimum Credits:**

- 120 credits required for the degree.
Computer Software Engineering (AS)

A student with an Associate of Science in Computer Software Engineering will be able to:

1. Demonstrate fluency in multiple languages, including one object-oriented language and one scripting language
2. Understand the fundamentals of computer hardware, including assembly language
3. Develop complete websites
4. Understand the behaviors and implementation of computer networking
5. Understand basic principles for developing and deploying high-quality software systems
6. Manage systems, including UNIX-based computers
7. Work effectively in a group software development effort
8. Understand the historical and social context of information technology

All students actively participate in the design and development of a software system and present the results of that effort.

The student, in conjunction with the Department Chair, may develop a sequence of courses to best meet their background and needs that still satisfies the degree requirements. A typical curriculum is shown here.

The minimum number of credits required for the degree is 61.

Three of the program's general education credits are included in ELT 4701 and 4702.

Courses marked with † are offered every other year.
Electromechanical Engineering Technology (BS)

A student with a Bachelor of Science in Electromechanical Engineering Technology will be able to:

1. Demonstrate an ability to apply the knowledge, techniques, skills, and modern tools of mathematics, science, engineering, and technology to solve broadly defined engineering problems appropriate to the discipline
2. Demonstrate an ability to design systems, components, or processes meeting specified needs for broadly defined engineering problems appropriate to the discipline
3. Demonstrate an ability to apply written, oral, and graphical communication in broadly defined technical and non-technical environments; identify and use appropriate technical literature
4. Demonstrate an ability to conduct standard tests, measurements, and experiments related to the discipline and interpret the results to improve processes
5. Demonstrate an ability to function effectively as a member or leader of a technical team

Educational objectives that are demonstrated during their workforce careers include:

- **Engineering skills**: analyze, design, and implement electromechanical systems and products
- **Engineering management skills**: qualify for positions of responsibility and apply project management techniques to electromechanical systems; be immediately employable and productive in the workplace
- **Design skills**: demonstrate creativity in the design of systems, components, or processes by researching and developing multiple solutions to problems and using a variety of tools and techniques in their work
- **Innovation skills**: prepare for lifelong learning, adapt to new and emerging technologies; continue their formal education

The program is accredited by the Engineering Technology Accreditation Commission of ABET, [http://www.abet.org](http://www.abet.org).

The minimum number of credits required for the degree is 130.

### Credits

| 15 | 13 |

*General education requirements for this program include a cumulative 24 credits, nine of which must contain a strong writing component and three of which must be at the 3000 level. Three of the 24 credits are included in ELM 4701 and 4702.*
General Engineering Technology

Administered by the college’s Continuing Education & Workforce Development (CEWD) office, GET degree programs are industry-sponsored and offered primarily at the facilities of sponsoring organizations. The curriculum consists of initial courses common to all GET degree programs, as well as a sequence of technology foundation and technical emphasis courses specific to the needs of a workforce education population. These industry-specific technical courses are developed by a curriculum development team comprised of Vermont Tech faculty and representatives from the sponsoring organizations. The goal is a flexible, interdisciplinary path to the acquisition of basic engineering concepts and specific job-related skills needed for the student to excel in their current position and prepare for career growth.

</tr>
</tbody>
</table>

19-20

Technical Emphasis Courses

A combination of technical courses based on the degree emphasis is required. These courses must have the following characteristics:

- Lab or hands-on components when practicable; these experiences build troubleshooting and problem-solving skills as well as providing exposure to course topics
- At least one multi-course sequence; the program shouldn't contain only introductory courses (typically, there are 1000-level courses followed by 2000-level courses which lead to more advanced issues; prerequisites are established and reinforced)
- A capstone experience (typically a senior project course) which requires students to call upon the comprehensive skills/knowledge gained in the program
- Integration of theoretical topics with practical skills
Manufacturing Engineering Technology (BS)

A student with a Bachelor of Science in Manufacturing Engineering Technology will be able to:

1. Apply knowledge, techniques, skills, and modern tools of mathematics, science, engineering, and technology to solve broadly defined engineering problems appropriate to the discipline
2. Design systems, components, or processes meeting specified needs for broadly defined engineering problems appropriate to the discipline
3. Apply written, oral, and graphical communication in broadly defined technical and non-technical environments and identify and use appropriate technical literature
4. Conduct standard tests, measurements, and experiments and analyze and interpret the results to improve processes
5. Function effectively as a member as well as a leader on technical teams

Educational objectives that are demonstrated during their workforce careers include:

- **Engineering skills**: apply technical knowledge and leadership skills to contribute to manufacturing competitiveness through process and systems design, operations, quality, continuous improvement, lean manufacturing, and sustainability
- **Communication skills**: employ strong communication, leadership, and teamwork skills and participate productively on a professional team
- **Innovation skills**: Develop and continuously improve in a career in manufacturing or a related field

The program is accredited by the Engineering Technology Accreditation Commission of ABET, [http://www.abet.org](http://www.abet.org).

Minimum degree requirements are listed on the [program page](http://www.abet.org). A typical curriculum is shown here.

Manufacturing Engineering Technology
Mechanical Engineering Technology (AE)

A student with an Associate of Engineering in Mechanical Engineering Technology will be able to:

1. Apply knowledge, techniques, skills, and modern tools of mathematics, science, engineering, and technology to solve well-defined engineering problems appropriate to the discipline
2. Design solutions for well-defined technical problems and assist with the engineering design of systems, components, or processes appropriate to the discipline
3. Apply written, oral, and graphical communication in well-defined technical and non-technical environments and identify and use appropriate technical literature
4. Conduct standard tests, measurements, and experiments and analyze and interpret results
5. Function effectively as a member of a technical team

Educational objectives that are demonstrated during their workforce careers include:

- **Engineering skills**: develop a successful career in manufacturing, design, specification, installation, testing, operation, maintenance, sales, or documentation of mechanical systems
- **Professional skills**: employ strong communication and teamwork skills and participate productively on professional teams of engineers, technicians, managers, and skilled production workers
- **Design skills**: utilize technical knowledge and skills to effectively design, fabricate, manufacture, and maintain industrial and consumer systems and products
- **Innovation skills**: continuously develop as a professional; adapt and stay current in their field

The program is accredited by the Engineering Technology Accreditation Commission of ABET, [http://www.abet.org](http://www.abet.org).

The minimum number of credits required for the degree is 65.

School of General Education

General Education

Vermont Tech is committed to the intellectual and personal development of every student. Our educational programs foster the development of the whole person. This philosophy also aligns with Vermont Tech's Definition of an Educated Person:

Vermont Tech faculty, staff, and students believe that an educated person is one who assumes responsibility for their own learning, for career preparation, and for citizenship. We believe that an educated person consistently strives to reach their full potential, can think critically, is globally aware, is civically engaged, is curious, and is an effective communicator.

We seek to foster an appreciation in each student for the major domains of human achievement; to provide a common educational experience; to refine ethical reasoning, critical thinking, writing, information literacy, communication, and quantitative and qualitative reasoning skills; to nurture civic, cultural, and global awareness and responsibility; to celebrate diversity and common values; to foster lifelong learning; and to produce a well-rounded graduate.

A baccalaureate graduate from Vermont Tech will be able to:

1. Effectively speak, write, and communicate with a team
2. Exhibit effective scientific and quantitative reasoning and problem-solving skills appropriate to their program field
3. Prove effective qualitative and algorithmic reasoning skills
4. Demonstrate an informed personal, civic, and social awareness
5. Exhibit an informed aesthetic and cultural awareness
6. Establish effective and ethical decision making skills
7. Find and critically consider information from a wide range of sources
8. Demonstrate essential skills and duties expected of professionals in their program field
9. Continuously acquire new concepts, skills, and technologies in their program field

The college doesn't guarantee that general education or elective courses are available and reserves the right to withdraw or restrict enrollment if a class is over-enrolled, under-enrolled, or the availability of faculty or other resources are limited. The student must still complete each requirement prior to receiving a degree. Some courses offered by major departments may fulfill elective requirements only for students who aren't majoring in that department and only if the courses are approved for elective credit.

Course requirements may be fulfilled by simultaneous enrollment at other VSCS schools under the VSCS Consortium Agreement. Students can't use one course to meet more than one requirement within their program except to meet a graduation standard or dual major/degree requirement.

The student works with their advisor to develop a plan to meet the general education elective requirements without requiring additional class loads or terms.

Associate degree requirements

Depending on specific program requirements, each associate degree student must complete the following general education requirements to meet the 20 credits minimum:

- 3 credits of English (composition, writing, and research)
- 3 credits of technical communication
- 4 credits of natural or physical sciences
- 1 credit of information technology
- 6 credits of arts/humanities or social sciences
- 3 credits of mathematics/critical thinking

Bachelor's degree requirements

Depending on specific program requirements, each bachelor's degree student must complete the following general education requirements plus any other general education courses required to meet the 40 credit minimum:
General Education

- 3 credits of English (composition, writing, and research)
- 3 credits of technical communication
- 12 credits of arts/humanities and social sciences (3 credits minimum at the 3000 level)
- 3 credits of information technology
- 7 credits of natural or physical sciences
- 6 credits of mathematics/critical thinking
- 6 credits of other general education courses

Arts & Humanities & Social Sciences Electives (AH/SS)
Each student is exposed to methods of inquiry and major concepts in the arts and humanities, human behavior, personality, politics, economics, and the social context of human interaction. Courses at the lower level are offered as survey and special topics courses to expose students to a broad array of concepts and enhance reading, writing, and communication skills. Courses at the upper level require a higher level of learning and understanding. SS electives include survey courses from ECO, GEO, HIS, PSY, and SSC. For current offerings, see the academic scheduling page.

English Requirements
Each student completes ENG 1061 or its equivalent or a sequence of courses that emphasizes reading and writing and requires the successful completion of a research paper. Degree students may satisfy the requirements by completing one of the following as determined by placement: ENG 1042 and 1060; ENG 1060; or ENG 1061.

Each student also completes ENG 2080 which emphasizes the principles and forms of communication in the workplace, including a technical report, and they complete coursework that emphasizes effective speaking, organization, and presentation skills.

Information Technology Requirements
Each student uses computer information technology, including internet orientation, research, email, word processing, and software applications applicable to their field of study.

Mathematics/Critical Thinking Requirements
Each student completes the mathematical or empirical techniques for problem-solving in logic and critical thinking appropriate for their program of study. In addition to the regular mathematics offerings, there are other courses under separate subject listings that satisfy the logic and critical thinking component of this requirement.

Natural Sciences Requirements
Each student explores the natural or physical sciences, including a lab experience. The course of study is determined by the major and can be filled by coursework available as electives. These science courses include BIO, CHE, and PHY, as well as appropriate coursework under other prefixes.
The Career & Technical Teacher Education Program is an approved Vermont Agency of Education (AOE) alternative educational licensing route for trades and industry teachers at Vermont's secondary regional career and technical centers.

Typically, once a teacher is hired at a regional career and technical center, they enter this three-year program to complete the qualifications for a Vermont Level I Educator License. The teacher-candidate first obtains an apprenticeship license from the AOE, which requires at least a high school diploma and six years of experience in the trades or industry, or an associate degree and at least four years of experience. The teacher-candidate takes education courses and receives support during the next three years from the program.

Enrollment in these courses requires the permission of the Program Director.

Total: 23 credits
### Undeclared Major

A student who has met acceptance requirements but hasn't decided on a specific program of study may be admitted to the college with an undeclared status in either the fall or spring term. The student who might be interested in this program is one who's uncertain about a major, wants to begin college mid-year, wants a lighter credit load, wants a slower pace, or has other plans for subsequent terms. A student who matriculates as undeclared is expected to select a degree program by the end of their second term. When ready to declare, the student applies for a change of program during Registration. Acceptance into a degree program is contingent upon space availability and department approval. Capped programs are handled through Admissions. Once in the program, the student must meet all the requirements of that program for graduation.

Enrollment as undeclared is based on placement, student desire, and class availability. Undeclared status increases the time it takes to complete a degree. No student is eligible to graduate as undeclared and don't have scheduling priority over degree-seeking students.

A minimum of 12 credits are required for full-time status and on-campus residency. Subsequent terms may be scheduled as necessary.

The student, in conjunction with their advisor, may develop a sequence of courses to best meet their background and needs that still satisfies any program requirements. A typical curriculum is shown here.

School of Nursing & Health Professions

**Dental Hygiene (BS)**

A student with a Bachelor of Science in Dental Hygiene will be able to:

1. Competently perform the role of a dental hygienist in varied situations and settings
2. Demonstrate the functional acuity and rationale for performing clinical techniques
3. Continually promote the most current concepts of disease control and prevention
4. Emphasize and promote ethical and responsible considerations in patient care
5. Make an essential and unique contribution as an integral member of a healthcare team
6. Demonstrate a basic knowledge of legal responsibilities and ethical considerations of patient care
7. Demonstrate a commitment to continuous and lifelong learning

The Vermont Tech entry-level Dental Hygiene program consists of a three-year CODA-approved associate degree followed by a final online year accredited by NECHE, resulting in a Bachelor of Science in Dental Hygiene. Upon successful completion of either the associate or bachelor’s degree, the student is eligible for application for dental hygiene licensure.

All dental hygiene professional courses must be taken in the prescribed six-term sequence. The curriculum is time-intensive and the required courses are rigorous. Complete dedication to coursework is required for successful completion of the program.

The minimum number of credits required for the associate degree is 93.

The minimum number of credits required for the bachelor’s degree is 120.

**All DHY and BIO course must be completed with a grade of C or better to continue in the program.**
# Dental Hygiene (+2 BS)

A student with a Bachelor of Science in Dental Hygiene will be able to:

1. Explore various occupational settings such as public health, education, sales, and research
2. Study further at the graduate level
3. Broaden their knowledge base and education experience in dental hygiene and general education courses
4. Demonstrate skills in critical thinking and evidence-based research
5. Demonstrate a commitment to lifelong learning

All courses are completed online, no campus visits are required, and the student has six years to complete the required courses for the bachelor’s degree. The degree may be earned while the student is employed as a practitioner or working as a full-time student.

This program holds articulation agreements with Bristol Community College, Cape Cod Community College, Cuyahoga Community College, Middlesex Community College, Monroe Community College, Mount Wachusett Community College, New Hampshire Technical Institute, Quinsigamond Community College, Springfield Technical Community College, and Tunxis Community College associate degree dental hygiene programs. These agreements are designed to maximize the number of credits students can transfer to Vermont Tech.

The minimum number of credits required for the degree is 120.

*All DHY and BIO courses must be completed with a grade of C or better to continue in the program.*
Nursing (PN)

A student with a certificate in Practical Nursing will be able to:

1. Employ the nursing process for select clients to maintain, achieve, or regain optimal self-care
2. Integrate knowledge of scientific, behavioral, and cultural principles in the care of clients in a variety of settings
3. Establish collaborative relationships with members of the nursing and health team
4. Maintain confidentiality in a clinical setting and support the use of legal and ethical standards
5. Assume the role of a member of an interdisciplinary team
6. Provide care which maximizes the self-care potential of individuals across the lifespan in a variety of healthcare settings
7. Contribute to the development of a teaching plan for the client with an alteration in basic self-care needs
8. Assume responsibility for self-directed, goal-oriented growth

The PN program extends over three terms, August through June. The student learns PN skills through independent study, lectures, demonstrations, and practice in a nursing skills lab and provides patient care under instructor supervision in a variety of healthcare settings.

Upon completion of the program, the graduate is awarded a certificate and may apply to take the NCLEX for Practical Nursing Licensure. It's the Vermont State Board of Nursing's responsibility to determine eligibility to sit for the licensure examination and to issue a license.

Students accepted into the Practical Nursing program must be 18 years of age by September 1 of the PN fall term.

PN students must receive a grade of C+ or better in all NUR courses and a C or better in BIO and PSY courses in order to progress in the program. If a student in the last term of the program doesn't achieve these grades, they aren't allowed to graduate. Grades lower than the required 75 or 77 are reflected on the transcript with the corresponding letter grade, so credits may be awarded for any grade above an F, but the student won't progress or graduate from the program.

The minimum number of credits required for the certificate is 35.

**Spring2 Term**

| **NUR 0131**  | Principles & Practices of Nursing III Lab |
| **NUR 1131**  | Principles & Practices of Nursing III    |
|              |                                                |

* Prerequisite courses required at all sites except Randolph and Williston.
The certificate program includes 495 hours of theory and 630 hours of clinical/lab.
Only 35 credits from the PN program count toward cumulative credits. Only non-clinical hours/courses count toward GPA.
Nursing (ADN)

A student with an Associate of Science in Nursing will be able to:

1. Evaluate the plan of care to assist clients with complex healthcare needs to maintain, achieve, or regain their optimal level of self-care
2. Select appropriate scientific, behavioral, and cultural principles for the care of clients with complex needs in diverse settings
3. Evaluate interpersonal skills in professional practice
4. Incorporate behaviors consistent with legal and ethical standards of professional practice
5. Assume the role of manager of care within the interdisciplinary team
6. Competently deliver nursing care which maximizes the self-care potential of individuals with complex health needs in diverse settings
7. Evaluate a comprehensive teaching plan to meet the physical and emotional needs of individuals and groups with common and complex healthcare needs
8. Demonstrate accountability for growth as individuals, as members of society, and as professional nurses

The ADN program articulates with the PN program and requires two further terms of full-time study. The 12 clinical PN credits don't transfer to the ADN program.

Vermont Tech guarantees direct progression from PN to ADN for qualified students. Because of the competitive demand for seats and the limitations of clinical placements in some areas of the state, students must have to continue at a site other than their first choice and must request their first, second, and third site preferences on their Request for Nursing Direct Progression form. Priority goes to students who wish to remain at their PN site, in order of GPA. Once ADN seats are filled at a site, we place students at their next preferences as seats are available. A student whose first preference is an ADN site other than their PN site is considered for that site only after qualified PN students at that site have been offered a seat.

Graduates may apply to take the NCLEX-RN. It's the Vermont State Board of Nursing's responsibility to determine eligibility to sit for the licensure examination and to issue a license.

ADN students must receive a grade of C+ or better in all NUR courses and a C or better in BIO and PSY courses in order to progress in the program. If a student in the last term of the program doesn't achieve these grades, they aren't allowed to graduate. Grades lower than the required 75 or 77 are reflected on the transcript with the corresponding letter grade, so credits may be awarded for any grade above an F, but the student won't progress or graduate from the program.

To progress directly from the ADN to the BSN level, a student must:

• Declare their intent to progress on a Change of Program form no later than March 31 of the year in which they wish to progress
• Maintain a minimum cumulative 2.5 GPA throughout the ADN program
• Obtain licensure as a Registered Nurse during the summer after completing the ADN degree

The minimum number of credits required for the certificate is 70.

</tbody>
</table>

The associate degree program includes 420 hours of theory and 315 hours of clinical/lab. Only non-clinical hours/courses count toward GPA.
**Nursing (BSN)**

A student with a Bachelor of Science in Nursing will be able to:

1. Collaborate with patients, the interdisciplinary team, and multiple care providers when planning care to establish patient-centered goals to optimize wellness outcomes and evaluate care plan effectiveness for the individual, organization, and community
2. Engage applied sciences including scientific, behavioral, psychological, and cultural principles for the care of complex patients that incorporates global appreciation, understanding, and tolerance; design evidence-based practice to improve patient care and health
3. Determine utilization of collaborative relationships with the healthcare team and the community to facilitate communication of team members to enhance care, promote quality care, and strategize utilization of technology, embracing diversity while evolving therapeutic communication techniques of presencing and dialogical exchange
4. Integrate legal and ethical standards that address potential ethical dilemmas and promote self-integrity and consider benefits to the community’s, state’s, and nation’s health
5. Coordinate and co-lead the interdisciplinary team; advocate for patients by compassionately caring for people and families using the art and science of nursing in theoretically and evidence-based practice
6. Help people flourish and find optimal meaning in their lived experiences, demonstrate sound nursing judgement, utilize critical thinking, develop scholarship, and promote the healthiest possible community, state, and nation
7. Design a holistic teaching plan or pamphlet with understanding of the person, health, environment, and nursing
8. Strive for excellence through ongoing engagement in self-directed lifelong learning with participation as an active member of society in their community; working with or becoming leaders; and developing their professional identity and ability to work with teams to create innovative or evidence-based solutions to problems

The Bachelor of Science in Nursing at Vermont Tech is fully online. Students currently enrolled in the ADN program may continue directly in the BSN program if they maintain a minimum 2.5 GPA and obtain a Registered Nurse license prior to beginning NUR courses in the BSN program.

BSN students must receive a grade of C or better in all NUR courses for the course to count toward the degree. If a student receives a grade of less than a C, the student is placed on academic probation but can continue to take classes. They may retake the course once within a one-year period and are removed from probation if they receive a C or better in that course. Receiving a grade of C- or less in the same course twice or once in two separate courses is grounds for dismissal from the program. The Associate Dean of Nursing reviews such cases for mitigating circumstances and makes final decisions regarding dismissal. Please see the Nursing Student Readmission Policy in the Nursing Student Handbook.

The minimum number of credits required for the degree is 120.

The BSN program includes 675 hours of theory and 225 hours of precepted time that can be completed in the student's community or work setting.

Courses marked with an asterisk (*) are offered as half-term classes of 7.5 weeks each.
A student with a certificate in Paramedicine will be able to:

1. Demonstrate proper affective behaviors when interacting with patients, the public, and members of the health care team
2. Perform a comprehensive history and physical examination to identify factors affecting the health and health needs of a patient
3. Formulate a field impression based on analysis of comprehensive assessment findings, anatomy, physiology, pathophysiology, and epidemiology
4. Relate assessment findings to underlying pathological and physiological changes in the patient’s condition
5. Integrate and synthesize the multiple determinants of health and clinical care
6. Perform health screenings and referrals
7. Effectively communicate in a manner that’s culturally sensitive and intended to improve patient outcome
8. Safely and effectively perform all psychomotor skills within the National EMS Scope of Practice Model and state Scope of Practice at the Paramedic level
9. Anticipate and prospectively intervene to improve patient outcome
10. Act as a role model of exemplary professional behavior
11. Perform basic and advanced interventions as part of a treatment plan intended to mitigate an emergency, provide symptom relief, and improve the overall health of the patient
12. Evaluate the effectiveness of interventions and modify treatment plans accordingly
13. Report and document assessment findings and interventions
14. Collect and report data for epidemiological and research purposes
15. Perform a patient assessment, develop a treatment plan, and develop a disposition plan for a patient with a variety of medical and traumatic complaints
16. Function as the team leader of a routine, single-patient advanced life support emergency call
17. Ensure the safety of rescuers and others during an emergency
18. Assume responsibility for self-directed, goal-oriented growth

The minimum number of credits required for the certificate is 39.

Radiologic Science

Radiologic Science (AS)

A student with an Associate of Science in Radiologic Science will be able to:

1. Use algorithmic reasoning when determining exposure factors to obtain diagnostic quality radiographs with minimum radiation exposure
2. Practice radiation protection for the patient, self, and others
3. Position the patient and imaging system to perform optimum radiographic examinations on patients throughout the lifespan
4. The successful student will use effective non-verbal, oral and written communication in patient care to anticipate and provide basic care and comfort, patient education as well as for professional relationships
5. Exercise critical thinking and discretion in the technical performance of medical imaging procedures consistent with current standards of practice
6. Support cultural and social awareness when providing medical imaging procedures
7. Appraise patient information from multiple sources to perform medical imaging procedures consistent with the scope of practice

Each student receives hands-on experience in medical imaging. Along with radiologic technology, the student participates in other areas of medical imaging, including computed tomography, magnetic resonance imaging, and mammography.

The program builds a strong framework for further study.

The minimum number of credits required for the degree is 77.

Respiratory Therapy (AS)

A student with an Associate of Science in Respiratory Therapy will be able to:

1. Demonstrate technical proficiency in the skills needed to deliver competent respiratory care
2. Integrate science and evidence-based medicine to select, deliver, and evaluate respiratory care competently
3. Use effective communication strategies to develop and maintain strong, respectful therapeutic relationships with patients and healthcare professionals
4. Collaborate with healthcare professionals to promote shared decision-making in achieving quality patient care
5. Demonstrate the leadership skills required of today’s respiratory therapists

Graduates are eligible to attempt the credential examinations offered by the National Board for Respiratory Care. Upon successful completion of the credential exams, graduates receive the Registered Respiratory Therapist credential.

Credentialed respiratory therapists must apply for licensure to practice in Vermont and New Hampshire. The offices of professional regulation require information regarding past history of substance abuse, prior felony convictions, and failure to pay child support or taxes to determine eligibility. Other states requiring licensure for practice may ask similar questions. For more information, please refer to the Vermont Secretary of State or the New Hampshire Office of Professional Licensure and Certification.

The minimum number of credits required for the degree is 67.

School of Professional Studies & Management

Minors, Concentrations, & Specializations

The Business Technology & Management department offers a minor or concentration in Entrepreneurship and a specialization in Small Business Planning.

A minor is a secondary area of interest that often complements a major or it may be a completely different area of study which serves to balance the student's educational experience and life preparation. A student who satisfies the minor requirements for their area of major study may earn a concentration. Although not a degree requirement of the college, minors and concentrations allow students to group related courses into an organized field of study. Minors require a minimum of 18 credits of related study and a minimum GPA of 2.0 for those credits.

There are no limits to the number of minors that a student may earn. Students apply for a minor in their junior year or by permission of the host department. Students may take courses related to the minor prior to their junior year provided they meet the course requirements. Applying for a minor requires completion of a Declaration of Intention to Complete a VTC Minor form and good academic standing. Graduates of Vermont Tech with a bachelor's degree may not earn a minor.

**Entrepreneurship Minor**

In this minor for non-Business bachelor's degree majors, students must take the following courses. No more than 9 credits of the minor may be applied to the major degree requirements.

**Entrepreneurship Concentration**

In this concentration for Business bachelor's degree majors, students must take the courses in the previous table. No more than 9 credits of the minor may be applied to the major degree requirements.

**Small Business Planning Specialization**

In this specialization (open to all students including non-degree), students must take the following courses. All credits may be applied toward graduation requirements.

12-13
Applied Business Management (+2 BS)

Applied Business Management is a degree-completion program that's offered entirely online. Students must have at least 50 transferrable credits from an accredited institution. All coursework from an accredited institution not used to meet core requirements may be used toward the 120-credit minimum provided that it does not duplicate other coursework.

A student with a Bachelor of Science in Applied Business Management will be able to:

1. Determine the key characteristics and terminology of the business disciplines of management, human resources, marketing, innovation, and finance and integrate these disciplines to develop and affect corporate strategies and plans
2. Communicate with written, oral, visual, and interpersonal messages to convey information, promote ideas, provide customer service, and advance career goals
3. Explain the accounting cycle; process typical transactions; interpret financial statements; prepare budgets; forecast and evaluate risk; and apply financial information to broad-based business decision making
4. Lead and participate in teams, maintain respectful and collaborative relationships, and contribute to effective group outcomes
5. Use digital and analytical tools to design and create business documents and presentations to manage people and projects and to solve problems
6. Develop marketing strategies to satisfy specific target audiences, create a marketing mix, and apply and integrate marketing concepts with other business disciplines to affect a business strategy
7. Demonstrate qualitative and quantitative critical thinking skills to analyze current business situations and new ventures from legal, economic, social, and ethical perspectives and recommend appropriate actions
8. Recommend and justify best practices in management, motivation, and leadership concepts to create and sustain a positive organizational culture in a global and diverse environment

Minimum degree requirements are listed on the program page. A typical curriculum is shown here.

The minimum number of credits required for the degree is 120.

Automotive Technology (AAS)

A student with an Associate of Applied Science in Automotive Technology will be able to:

1. Understand the theory of operation, plus diagnostic service procedures, for gasoline engines light-duty hydraulic brake systems; passenger car and light truck suspension and steering systems; automotive electrical and electronic systems; passenger car and light truck drive train systems; automotive engine performance; advanced technology automotive vehicles; passenger car and light truck transmissions; and automotive heating and air-conditioning systems
2. Communicate effectively with automotive customers and business relations
3. Exhibit the principles of professional conduct in all aspects of customer relations

The student must possess a set of hand tools for use in the lab and for the summer internship program. A tool list is available from the department. The student should also have a dependable vehicle to travel to and from the lab facilities. Students are required to wear black work pants and steel-toed leather work or hiking boots in all lab sections. The college provides t-shirts.

The minimum number of credits required for the degree is 65.

Construction Management (AAS)

A student with an Associate of Applied Science in Construction Management will be able to:

1. Communicate construction materials and methods using graphical symbols, drafting practice, and computer-aided design
2. Create and oral communications appropriate to the discipline
3. Use computers for computation, research, documentation, and communication
4. Identify building components and materials
5. Demonstrate and model industry-accepted (OSHA) safety practices
6. Understand a load table and choose proper materials for structural members
7. Create and administer construction schedules
8. Apply basic surveying techniques for construction layout and control
9. Create written communications appropriate to the discipline
10. Complete construction project cost estimates

Due to emphasis on mobility, cooperative projects, and paperless construction management in the program, we recommend a laptop. Electronic textbooks are used frequently. Software, including Microsoft Office, Bluebeam, and AutoCAD, is available to students at little to no cost. A student in this program will need basic construction hand tools such as a tape measure and tool belt.

The minimum number of credits required for the degree is 66.

Construction Management (BS)

In addition to the student outcomes included in the associate program, a student with a Bachelor of Science in Construction Management will be able to:

1. Demonstrate strong technical and problem-solving backgrounds for management positions
2. Control or contribute to a profitable construction-related business
3. Adapt to technological and process changes in a rapidly developing field
4. Exhibit resiliency, lifelong learning, and a “no excuses” mentality
5. Create and implement a company safety plan
6. Create, estimate, condense, and graphically communicate Gantt, network diagram, and activity on node project management charts
7. Estimate and submit competitive construction bids
8. Manage a construction project, including materials and resources, from design phase to close out
9. Interpret construction drawings, specifications, and permits for implementation of best management practices
10. Properly lay out and site buildings, bridges, and roads from designs
11. Manage documentation for payments, inspections, as-built drawings, and progress submittals
12. Provide immediate first aid and life-saving care to other employees
13. Evaluate multiple choices in the means and methods of construction for fiscal decision-making and planning

The minimum number of credits required for the degree is 123.

**Diesel Power Technology (AAS)**

A student with an Associate of Applied Science in Diesel Power Technology will be able to:

1. Understand the theory of operation, plus diagnostic service procedures, for diesel engines heavy-duty hydraulic and air brake systems; heavy-duty suspension and steering systems; heavy-duty electrical and electronic systems; heavy-duty drive train systems; advanced technology vehicles and equipment; heavy-duty transmissions; and heavy-duty heating and air-conditioning systems
2. Communicate effectively with customers and business relations
3. Exhibit the principles of professional conduct in all aspects of customer relations

The student must possess a set of hand tools for use in the lab and for the summer internship program. A tool list is available from the department. The student should also have a dependable vehicle to travel to and from the lab facilities. Students are required to wear black work pants and steel-toed leather work or hiking boots in all lab sections. The college provides t-shirts.

The minimum number of credits required for the degree is 62.

Diesel Technology

Diesel Technology (C)
This certificate program allows the student to begin a successful career in the heavy-duty diesel service industry without taking additional math, science, English, and general education courses.

Upon completion of the certificate program, the student can achieve an Associate of Applied Science in Diesel Power Technology with one additional year of study.

The student pursuing the certificate should be cautioned that most upscale original equipment manufacturer’s dealerships (Milton CAT, NORTRAX, etc.) require a minimum of an associate degree before they hire graduates.

The minimum number of credits required for the certificate is 29.

Entrepreneurship (AAS)

A student with an Associate of Applied Science in Entrepreneurship will be able to:

1. Identify the key characteristics and terminology of the business disciplines of management, human resources, marketing, innovation, and finance
2. Communicate with written, oral, visual, and interpersonal messages to convey information, promote ideas, provide customer service, and advance career goals
3. Complete the steps of the accounting cycle to process typical business transactions; prepare and interpret financial statements; and use integrated accounting software to record finances for a small business
4. Participate in teams; maintain respectful and collaborative relationships; and contribute to effective group outcomes
5. Use Microsoft Office and Adobe Creative Suite software to design and create business documents
6. Develop marketing strategies to satisfy specific target audiences and create a marketing mix that will generate a competitive advantage
7. Explain and apply an entrepreneurial mindset to processes of innovation
8. Integrate entrepreneurship concepts and skills to develop a feasibility plan

Minimum degree requirements are listed on the program page. A typical curriculum is shown here.

The minimum number of credits required for the degree is 61.

Entrepreneurship (BS)

A student with a Bachelor of Science in Entrepreneurship will be able to:

1. Determine the key characteristics and terminology of the business disciplines of management, human resources, marketing, innovation, and finance and integrate these disciplines to develop and affect corporate strategies and plans
2. Explain the accounting cycle, process typical transactions; interpret financial statements; prepare budgets; forecast and evaluate risk; and apply financial information to broad-based business decision making
3. Lead and participate in teams; maintain respectful and collaborative relationships; and contribute to effective group outcomes
4. Use digital and analytical tools to design and create business documents and presentations to manage people and projects and to solve problems
5. Develop marketing strategies to satisfy specific target audiences, create a marketing mix, and apply and integrate marketing concepts with other business disciplines to affect a business strategy
6. Demonstrate qualitative and quantitative critical thinking skills to analyze current business situations and new ventures from legal, economical, social, and ethical perspectives and recommend appropriate actions
7. Recommend and justify best practices in management, motivation, and leadership concepts to create and sustain a positive organizational culture in a global and diverse environment
8. Develop detailed components of a comprehensive business plan in support of a new venture launch
9. Participate in or assess an entrepreneurial venture

Minimum degree requirements are listed on the program page. A typical curriculum is shown here.

The minimum number of credits required for the degree is 120.

Entrepreneurship (+2 BS)
The +2 Entrepreneurship program is a degree-completion program. Students must have at least 50 transferrable credits from an accredited institution. All coursework from an accredited institution not used to meet core requirements may be used towards the 120-credit minimum provided that it doesn't duplicate other coursework.

Student outcomes correlate with the four-year bachelor’s degree.

Minimum degree requirements are listed on the program page. A typical curriculum is shown here.

The minimum number of credits required for the degree is 120.

Professional Pilot Technology (BS)

A student with a Bachelor of Science in Professional Pilot Technology will be able to:

1. Demonstrate the knowledge and flight skills necessary to attain FAA pilot certificates and ratings
2. Use critical-thinking and decision-making skills to accurately assess situations and manage risk
3. Communicate and work effectively as a leader and in multidisciplinary teams
4. Understand the historic aspects and current developments defining the state and evolution of modern aviation
5. Engage in professional development and recognize the need for life-long learning
6. Analyze and interpret data using aeronautical, mathematical, and scientific principles

Educational objectives that are demonstrated during their workforce careers include:

- Achieving success in the dynamic and growing aviation industry with proper academic and professional certification
- Demonstrating knowledge of contemporary world-wide aviation industry issues
- Utilizing specific flying skills to attain FAA certificates and ratings that allow for employment as pilots and flight crew within the international aviation industry
- Mastering critical thinking and decision-making skills necessary for safe and effective flying
- Committing to lifelong learning with focus on continuous development of professional skills

Completion of the degree entails intensive motivation and commitment. Pilot certificates or ratings must be completed in their assigned term. This may require flying 4-5 times each week. The Chief Flight Instructor and their assistants are required to follow the published milestones and stage checks for every student to ensure proper completion. The student must make up cancellations or delays on weekends and during scheduled breaks if necessary and must be available to fly seven days per week, including some night flights.

Success in the program requires understanding that consequences incur for noncompliance of scheduling requests, failure to meet milestones, and stage check failures. If continuous interventions are necessary, the student can expect grade reductions or dismissal from the program. Compliance with all schedules, FAA regulations, and course syllabi is a major part of the training for a career in aviation. Students are expected to dress professionally and in accordance with the season at all times.

The minimum number of credits required for the degree is 121.

Professional Pilot Technology
Course Descriptions

Accounting (ACC)

**ACC 1010** Computerized Accounting (3)  spring
This course demonstrates implementation and integration of various accounting systems on a microcomputer. The student becomes proficient with applications in general ledger, receivables, payables, inventory, fixed assets, and the preparation of financial statements.
1 hour of lecture, 2 hours of lab per week  Prerequisite: ACC 1020 or 2121

**ACC 1020** Survey of Accounting (3)  as required
In this course, the student identifies accounts and processes and records typical cash receipts, cash payments, and payroll transactions for a service business and a merchandising business. The student completes a worksheet; prepares and interprets financial statements; prepares adjusting and closing entries; and understands inventory valuation and depreciation of plant assets. This class is for non-Business majors.
3 hours of lecture per week

**ACC 2121** Financial Accounting (4)  fall
This course covers the basics of generally accepted accounting principles, terminology, and the accounting cycle. The students prepares financial statements and becomes familiar with special journals, receivables, payables, control accounts, inventory, depreciation, deferrals, accruals, and payroll.
3 hours of lecture, 2 hours of lab per week

**ACC 2122** Managerial Accounting (4)  spring
This course explores internal accounting systems and the use of internally generated data in management. Topics include the use of financial accounting data; cost-volume-profit analysis; budgets and responsibility accounting; and cost allocations.
4 hours of lecture per week  Prerequisite: ACC 2121

Aviation (AER)

**AER 1005** Introduction to Aviation Careers (3)  fall
This course presents an overview of aviation career opportunities for a student interested in becoming a professional pilot, flight attendant, dispatcher, mechanic, or a member of ground crew and the safety system that supports the aviation industry. The student visits aviation facilities and speaks to professionals in the field, including air traffic control, aircraft maintenance, airport operations, airline pilots, and crew members. An introductory flight with a separate fee may be arranged.
3 hours of lecture per week

**AER 1010** Private Pilot: Ground (3)  fall
This course presents the necessary aeronautical knowledge to pass the FAA Private Pilot written knowledge exam and oral exams for a Private Pilot certificate, Airplane category rating, Single-Engine Land class rating.
3 hours of lecture per week  Corequisite: AER 1021

**AER 1021** Private Pilot: Flight I (1)  fall
This course is one of two that provide the necessary aeronautical skill and experience to achieve the FAA Private Pilot certificate, Airplane category, Single-Engine Land class rating. The student has individual flight training with a Certified Flight Instructor, who teaches in accordance with all facets of the FAA Private Pilot Airman Certification Standards. This flight course provides 30 of the 55 minimum hours for the flight school requirements. Flight fees include a combination of aircraft, simulator, and flight instructor time. Any student who requires additional hours above the flight course is responsible for the cost.
30 flight hours per term  Corequisite: AER 1010
[Course fee: $12,655]

**AER 1022** Private Pilot: Flight II (1)  spring
This course is a continuation of AER 1021. The student has individual flight training with a Certified Flight Instructor, who teaches in accordance with all facets of the FAA Private Pilot Airman Certification Standards. This flight course provides 25 of the 55 remaining minimum hours for the flight school requirements. Flight fees include a combination of aircraft, simulator, and flight instructor time. The published flight fees do not include the FAA Private Pilot practical flight test; additional fees include both aircraft rental and Designated Examiner fees. Any student who requires additional hours above the flight course is responsible for the cost.
25 flight hours per term  Prerequisite: AER 1021

**AER 1053** Aerodynamics & Practical Flight Applications (4)  spring
This course is an algebra- and trigonometry-based course in aerodynamics related to practical flight applications and specifically addresses aviation topics including linear and curved motion studies; kinematics; force; statics; dynamics; work and energy; impulse and momentum; rotary motion; and fluids. Vector analysis plays an important role in developing conceptual models to explain cause and effect. The student conducts investigations, collects data, and interprets the results using graphical analysis. The application of mathematical models to observed events enhances the development and reinforcement of conceptual understanding.
3 hours of lecture, 2 hours of lab per week  Prerequisite: MAT 1311
[Course fee: $50]
AER 1110  Pilot Instrument Rating: Ground  (3)  spring
This course provides the required knowledge for a pilot to obtain an instrument rating which qualifies operations under Instrument Flight Rules (IFR) and provides the knowledge necessary to pass the FAA Instrument Rating written knowledge exam, Airplane category, Single-Engine Land class rating. It focuses on aeronautical knowledge, full procedural aspects of published instrument navigation, and instrument approaches. Topics relate to attitude flying, radio navigation aids, IFR systems, and partial panel exercise for approaches. The student reviews FAA test questions to prepare for the required FAA Instrument Rating Knowledge Exam and the FAA oral exam for the Instrument rating.
3 hours of lecture per week  Prerequisite: AER 1021  Corequisite: AER 1120

AER 1120  Pilot Instrument Rating: Flight  (2)  spring
This course provides training in aeronautical skill and procedures using both AATD simulators and aircrafts to acquire the FAA Instrument Rating, Airplane category. It builds skills of basic attitude flying, navigation, and air traffic control phraseology in the IFR environment. The student experiences flight solely by reference to instruments, by first practicing in advanced training devices followed by airplane training while wearing a vision-limited hood or by flying in actual instrument conditions. Instruction includes full training in instrument navigation on cross-country trips with multiple instrument approaches. The end result is an FAA Instrument: Airplane rating added to the student's pilot certificate. Training is conducted in flight stages with stage exams until completion. The course consists of 52 flight training hours; all students pay the same flight fees based on the number of flight hours.
52 flight hours per term  [Course fee: $12,334]  Prerequisite: AER 1021  Corequisite: AER 1110

AER 2010  Commercial Pilot: Ground  (3)  fall
This course provides the necessary aeronautical knowledge to pass the FAA Commercial Pilot written knowledge exam and oral exams for a Commercial Pilot certificate, Airplane category, Single-Engine Land class rating with emphasis on advanced knowledge, regulations, and performance expectations for higher-level flight skills.
3 hours of lecture per week  Corequisite: AER 2031

AER 2031  Commercial Pilot: Flight I  (2)  spring
This course is the first of two that provide the necessary aeronautical skill and experience to meet FAA requirements for a Commercial Pilot certificate, Airplane category, Single-Engine Land class rating. The student has individual flight training with a Certified Flight Instructor, who teaches in accordance with all facets of the FAA Commercial Pilot Airman Certification standards and includes both dual instruction and solo flying. This flight course provides 65 of the 120 minimum hours for the flight school requirements. Flight fees are based on the hours required by the Part 141 course and include a combination of aircraft, simulator, and flight instructor time. The published flight fees do not include the FAA Commercial Pilot practical flight test; additional fees include both aircraft rental and Designated Examiner fees. Any student who requires additional hours above the flight course is responsible for the cost.
65 flight hours per term  [Course fee: $14,954]  Corequisite: AER 2010

AER 2032  Commercial Pilot: Flight II  (2)  summer
This course is a continuation of AER 2031. The student has individual flight training with a Certified Flight Instructor, who teaches in accordance with all facets of the FAA Commercial Pilot Airman Certification standards and includes both dual instruction and solo flying. This flight course provides 55 of the 120 remaining minimum hours for the flight school requirements and is practice-intensive for flight skill building. Flight fees are based on the hours required by the Part 141 course and include a combination of aircraft, simulator, and flight instructor time. The published flight fees do not include the FAA Commercial Pilot practical flight test; additional fees include both aircraft rental and Designated Examiner fees. Any student who requires additional hours above the flight course is responsible for the cost.
55 flight hours per term  Prerequisite: AER 2031  [Course fee: $11,878]

AER 2110  Aviation Safety & Accident Investigation  (3)  fall
This course provides a fundamental understanding of safety factors in aviation operations and sufficient knowledge to prepare for safety components of advanced FAA certifications with particular attention on safe operation of small aircraft, managing distractions, communication, attitudes towards safety, and cultivating a firm commitment to safe operations at all times. The student uses actual NTSB accident reports to explore, analyze, and discuss the complex and interacting factors involved with aircraft accidents and the methodology of subsequent investigation. They attend at least two FAASTeam safety seminars.
3 hours of lecture per week

AER 2130  Aviation History  (3)  spring
This course explores the history of aviation from its earliest concepts and first practical flying machines to war birds, airliners, and modern aircraft. The student learns about the evolution of aviation technology including engines, materials, and aerodynamics. General world history provides a contextual background and enhances student understanding of how aviation has shaped the world. Topics include important
Course Descriptions

AER 2330  Aviation Physiology & Psychology  (3)  spring
Pilots have unique mental and physical demands that are critical for their safety-sensitive roles in ensuring safety and passenger comfort. This course focuses on understanding these demands and ensuring compliance from a regulatory and an ethical standpoint. The physiology component focuses on general health with emphasis on altitude physiology, vision, hearing, medications, and fitness. The psychological component emphasizes aeronautical decision-making, risk management, sleep, and fatigue. Both are integrated into a discussion of the FAA medical certification process and pilot duties and responsibilities of compliance.
3 hours of lecture per week

AER 2802  Aviation Fieldwork/Internship  (3)  spring
In this career-focused course, the student has the opportunity to get hands-on professional experience as pilot, flight instructor, or with aviation community partners. The student logs actual fieldwork hours; completes self-evaluations and weekly briefings of completed learning goals; and completes a review of an aviation-related book. The student must attend at least one professional development workshop, career fair, or conference and complete a briefing. Upon completion of the course, the student presents an evaluation from their fieldwork supervisor, two letters of recommendation for future employment, and a presentation of their work.
3 hours of lecture per week

AER 3010  Certified Flight Instructor: Ground  (6)  fall
This capstone course uses the student’s extensive Commercial Pilot knowledge to teach instructional skills. There is strong emphasis on the fundamentals of instructing and scenario-based training. Through the creation of weekly lesson plans delivered in the classroom with peers and in the broader community, the student builds confidence in their aviation knowledge and delivery; explore and understand their own learning and teaching styles; and recognize and support individual learners. Concepts, techniques, procedural training methods, and adult learning is augmented with applied activities aimed at developing an efficient, effective CFI equipped to provide individualized one-on-one training. Emphasis is on the learning individual and the judgment needed for this high-risk environment. Upon completion, the student may complete aircraft flight instruction with a senior CFI and step into their first job as a professional flight instructor.
6 hours of lecture per week  Corequisite: AER 3020

AER 3020  Certified Flight Instructor: Flight  (2)  fall, spring
This hands-on capstone course provides the necessary aeronautical skill and experience to meet the requirements for the FAA Certified Flight Instructor: Airplane certificate. The certificate provides authorization to train pilots for FAA certificates and ratings while building Pilot-in-Command flight time. Flight training prepares applicants with the knowledge, experience, and flight and communication skills to meet the requirements of the Flight Instructor Airman Certification Standards and pass the FAA Flight Instructor practical test. Published flight fees are based on the number of flight hours and do not include the FAA Flight Instructor practical flight test; additional fees include both aircraft rental and designated examiner fees. Any student who requires additional hours above the flight course is responsible for the cost.
15 flight hours per term  [Course fee: $4,375]  Corequisite: AER 3010

AER 3030  Human Factors, Risk Management, & Crew Resource Management  (3)  fall
As professionals in global aviation, pilots must demonstrate resiliency, critical thinking, leadership, decision-making, and stress management. This course allows the student to develop into their personal best as a pilot and essential part of a professional team. Using the latest research and training techniques from airlines and FAA programs, they learn to use threat and error management, single pilot resource management, and crew resource management as integral parts of their training and flying.
3 hours of lecture per week

AER 3040  Aircraft Maintenance for Pilots  (3)  fall
In this course, the student gets in-depth, hands-on learning with the mechanics of aircraft systems and components. Through practice in an approved aircraft and power plant maintenance training facility, the student becomes familiar with the tools for performing FAA-approved pilot maintenance tasks. The class covers the specific federal aviation regulations which govern pilot maintenance and the student keeps a maintenance log of their work. The student can write-up a faulty or inoperative system and communicate effectively with mechanics as they manage the maintenance and repair of the aircraft for which they’re responsible.
2 hours of lecture, 1 hour of lab per week  [Course fee: $100]

AER 3080  Airline Operations & Management  (3)  fall
This course gives a broad perspective of airline operations and management. Topics include the role of air transportation in global economic development; alternative strategic approaches to route structure and product design; fleet selection; finance and revenue management; distribution systems including the role of travel agencies, freight forwarders, global distribution systems, and internet portals; the regulatory foundation of international aviation; and the effects of liberalization, privatization, mergers, and emerging global alliances.
3 hours of lecture per week
### Course Descriptions

**AER 3110 Aviation Law (3)**
This course provides professional guidance on aviation law to aviation professionals, including how the legal system works in relation to aviation, administrative agency regulations, and decision-making based on Federal Aviation Regulations, which establish standards of legal behavior to hold professionals accountable. Given the ease with which civil aircraft cross national borders as part of transportation’s key role in today’s global economy, it also covers international concerns controlled by the Chicago Convention and its several Annexes published by the International Civil Aviation Organization emphasizing current statutory and regulatory changes. The student is taken through many real-life scenarios and discussions to give a vivid experiential basis for decision-making in their aviation careers.
3 hours of lecture per week

**AER 4010 Multi-Engine Land: Ground & Flight (1)**
An FAA Multi-Engine rating gives a competitive advantage when seeking employment within the commercial aviation sector. This course is all hands-on flight time, tutoring with the instructor, and observing peers in the cockpit or in a simulator. From the fundamentals of flying multi-engine aircraft and the aerodynamic laws that govern multi-engine flight to the challenging task of learning related aeronautical knowledge, the student becomes a proficient and knowledgeable multi-engine pilot. They practice to proficiency under dual instruction for all multi-engine training and master the content for an added Multi-Engine Land rating to their Commercial Pilot certificate and Instrument rating.
10 flight hours per term

**AER 4020 Certified Flight Instructor: Instrument Ground & Flight (1)**
In this course, the student applies pilot and flight instructor skills to teach students seeking instrument ratings. This adds the Instrument Instructor rating to their Certified Flight Instructor certificate and is one of the three ratings the student receives on their CFI. The new FAA certification is Certified Flight Instructor: Instrument Airplane, also known as the Double I rating.
15 flight hours per term

**AER 4030 Certified Flight Instructor: Multi-Engine Ground & Flight (1)**
In this course, the student learns the skills necessary to train pilots for Multi-Engine ratings. The student is already a skilled pilot with the basic Certified Flight Instructor: Airplane credentials, so emphasis is on honing instructional skills to train pilots on multi-engine aircraft. At the end of the course, the student receives their CFI: Multi-Engine rating. This is one of the capstone skill sets and certifications that gives an important advantage in getting a job as a fully-qualified flight instructor or commercial pilot.
15 flight hours per term

**AER 4040 Corporate Aviation & Career Preparation (3)**
In this course, the student gets a broad perspective on jobs in the world of aviation with focus on the cultural and operational differences in aviation businesses such as airline, charter, corporate, fractional, and owner-flown operations. The student follows the steps needed to apply for jobs, network, create an aviation resume, complete job applications, and give a successful interview and discovers the kinds of ethical dilemmas they may face in their career. They learn to sort out the many opportunities available and get tips on responding effectively to pressure to compromise safety, personal values, or income.
3 hours of lecture per week

**AER 4050 Training & Flying Advanced Airplanes (3)**
This course presents an in-depth study of typical complex aircraft systems and aerodynamic flight characteristics. Focus is on individual aircraft systems and the designed purpose of the aircraft. The student prepares for their first professional ground school on an advanced aircraft by utilizing a specific aircraft computer-based training program. They gain insight into the rapidly accelerating pace of change in aircraft design and the utilization, culture, disciplines, language, and structure used in a typical airline pilot training program and bolster their knowledge by studying real FAA Airline Transport Pilot test questions.
3 hours of lecture per week

**AER 4060 Introduction to Unmanned Aerial Systems (3)**
This course provides a general understanding of Unmanned Aerial Systems (UAS or drones), their components, and how they interact and are used. It includes a comprehensive introduction to all of the elements of a complete UAS and addressed topics including the air vehicle; planning and control; mission payloads; data links; launch and recovery concepts; and ethical and legal issues associated with UAS operations.
3 hours of lecture per week

**AER 4110 Advanced Transport Category Systems (3)**
A prospective airline pilot goes through extensive screening that proves their potential to command a jet aircraft. Knowledge of complex systems and operational limits of technical aircraft is essential to success as a professional. This course deals with the flight technology found in modern advanced commercial airline aircraft, both turbofan and turboprop.
3 hours of lecture per week
### AER 4130 High Altitude Navigation & International Flight Operations (3) spring
This course prepares the student to fly in a global world. They explore standard airline operations in the North Atlantic and Pacific Track systems, including flight planning; oceanic control sectors; clearance communications; plotting; track entry/exit; required position or event reports; and ICAO procedures and how they differ from domestic operations. They study hazardous weather, global weather support services, and the special requirements governing communications, operations, and reporting related to emergency and diversion procedures. They work in a team to plan an international ferry flight.
3 hours of lecture per week

### AER 4610 Aviation Senior Project (3) fall
In this course, the student applies program knowledge to an aviation project selected, planned, implemented, approved, and presented under the guidance and supervision of faculty and community experts. Their experience is augmented with group-based project management skills including planning, teamwork, problem-solving, leadership, and time management. Each student has the opportunity to assume different roles and responsibilities on the project and is graded by a review of community partners and peers.
3 hours of lecture per week

### Agriculture & Animal Science (AGR)

<table>
<thead>

</thead>
<tbody>
<tr>
<td>AGR 1011</td>
<td>Agricultural Techniques I (1)</td>
<td>fall</td>
<td></td>
<td>This course facilitates a successful transition to college and focuses on four primary areas: orientation; basic agricultural skills and related careers; and interpersonal development. The student learns the practical skills necessary to succeed including student rights and responsibilities; good time management; interacting with faculty and classmates; and enhancing academic performance. 2 hours of lab per week plus weekly required farm work experience</td>
</tr>
<tr>
<td>AGR 1012</td>
<td>Agricultural Techniques II (1)</td>
<td>spring</td>
<td></td>
<td>In this course, the student selects an area for independent study, working closely with the farm staff. 2 hours of lab per week plus weekly required farm work experience</td>
</tr>
<tr>
<td>AGR 1030</td>
<td>Animal Reproduction &amp; Genetics (3)</td>
<td>spring</td>
<td></td>
<td>This course focuses on the anatomy and physiology of reproductive systems and the estrous cycle in farm animals, leading to the development of sound breeding and selection skills using simple Mendelian and quantitative genetic principles. 3 hours of lecture per week [Course fee: $15]</td>
</tr>
<tr>
<td>AGR 1050</td>
<td>Livestock Production (3)</td>
<td>fall</td>
<td></td>
<td>This course focuses on the study of livestock in the New England agricultural industry. Topics include cell biology, beef cattle, sheep, swine, poultry, horses, a brief introduction into nutrition chemistry and technical and practical breeding, feeding, and management. 3 hours of lecture per week</td>
</tr>
<tr>
<td>AGR 1061</td>
<td>Burls to Boards (3)</td>
<td>as required</td>
<td></td>
<td>In this course, the student learns the principles of tree harvesting for wood product production. Topics include choosing, cutting, skidding, and milling common types of lumber in Vermont. Upon completion, the student can manage small woodlots for efficient personal production of lumber products. 2 hours of lecture, 3 hours of lab per week [Course fee: $15]</td>
</tr>
<tr>
<td>AGR 1062</td>
<td>Timber Harvesting (4)</td>
<td>spring</td>
<td></td>
<td>In this course, the student examines timber harvesting equipment operation, maintenance, and safety and learns the skills needed to administer a timber harvest. They assess land for implementation of a timber harvest management plan which includes proper skid trails; landings; access and erosion control; harvesting ethics; laws; and acceptable management practices. They also map and create a timber harvest plan based on forest inventory and land assessment. 3 hours of lecture, 3 hours of lab per week</td>
</tr>
<tr>
<td>AGR 1080</td>
<td>Forestry Management (4)</td>
<td>spring</td>
<td></td>
<td>This course introduces the student to the skills needed to create a comprehensive forest management plan for a landowner. Emphasis is on forest silviculture, mensuration, wildlife, and the ability to create a Vermont state current use plan. 2 hours of lecture, 6 hours of lab per week [Course fee: $25]</td>
</tr>
<tr>
<td>AGR 2011</td>
<td>Dairy Herd Management I (4)</td>
<td>fall</td>
<td></td>
<td>This course covers the skills necessary for the operation and construction of a modern dairy farm. The student evaluates facilities and operations for performance and learns the environmental, biological, and physical factors necessary for the production of high quality milk, while evaluating milk harvesting equipment and practices. Discussion includes the materials used for animal housing and all of the aspects of a highly functional animal environment. Emphasis is on farmstead planning and basic structural concepts for farm buildings, including construction materials and methods, environmental issues, waste management,</td>

</table>
Course Descriptions

and feeding systems.
3 hours of lecture, 2 hours of lab per week
[Course fee: $15]

**AGR 2012  Dairy Herd Management II** (2)  \(spring\)
This course covers the soft skills necessary for the operation of a modern dairy farm. The student synthesizes specific dairy knowledge into farm operational plans using multiple case studies, then models and discusses the habits necessary for the operation of a modern dairy farm. Young stock rearing is discussed in detail.
4 hours of lab per week

**AGR 2030  Animal Nutrition** (4)  \(spring\)
This course on the fundamentals of livestock feeding includes the study of the nutritive characteristics of forages, grains, and grain products as feeds for different farm animals. The student develops livestock rations and feeding programs based on available feedstuffs and needs for maintenance, growth, and production on the college’s dairy herd or the student’s home farm.
3 hours of lecture, 2 hours of lab per week  
[Course fee: $50]

**AGR 2040  Forage Production** (3)  as required
This course emphasizes the production of forage and pasture crops for New England dairy farms. Topics include the selection of adapted crops, varieties, seed mixtures, and soil sites, along with soil preparation, seeding methods, and crop management. Harvesting for best digestible energy and protein is stressed, as is the growing of alfalfa and corn.
2 hours of lecture, 2 hours of lab per week for the first half of the term  
[Course fee: $15]

**AGR 2050  Large Animal Diseases** (3)  as required
This course covers diseases of major importance in the husbandry of food animals with special emphasis on herd and flock health, disease prevention, basic pathological changes, and the immunological processes involved in the occurrence and prevention of disease.
3 hours of lecture per week

**AGR 2060  Beef Production** (2)  \(spring\)
This introductory course in beef production addresses topics including marketing and price-making forces; the biological cycle of the beef cow; reproductive management of cows, bulls, and heifers; principles of nutrition; beef genetics and the application of genetic principles to beef herd breeding programs; and animal health issues. Offered every third year.
1 hour of lecture, 2 hours of lab per week

**AGR 2110  Sheep Production** (2)  as required
This course includes an in-depth examination of successful sheep production and introduces the student to a range of issues relevant to sheep production, including breeds for different purposes, anatomy, nutrition, reproduction, growth, behavior, health, and marketing options. Offered every third year.
1 hour of lecture, 2 hours of lab per week

**AGR 2130  Dendrology** (4)  as required
This course introduces the student to the study of trees, their physiology, taxonomy, silvics, uses, and identification.
3 hours of lecture, 2 hours of lab per week

**AGR 3020  Advanced Livestock Production** (3)  \(spring\)
In this course, the student learns the reproduction, nutrition, housing, and financial requirements of profitable Vermont livestock operations. Swine, poultry and small ruminant species are covered in detail with some coverage of emerging livestock production including camels, ostriches, and emus. Offered every third year.
3 hours of lecture per week  
Prerequisite: AGR 1030, 1050, 2030

**AGR 3040  Maple Production: Science & Practice** (3)  \(spring\)
This course presents current information relating to all aspects of maple production. It covers principles and practical application of sugarbush management; sap production; maple production facilities and equipment; maple syrup production; product packaging and marketing; and operator safety.
2 hours of lecture, 2 hours of lab per week  
[Course fee: $10]

**AGR 3050  Applied Nutrient Management Planning** (3)  \(spring\)
This course provides the student with the skills needed to submit a nutrient management plan that aligns with Natural Resource Conservation Service and State of Vermont standards. Recommended agricultural practices, watershed management practices, and land use mapping techniques are discussed and demonstrated. Upon completion, the student may sit for the comprehensive nutrient management plan exam.
3 hours of lecture per week

**AGR 3110  Apples, Berries, & Bees** (3)  \(fall\)
This course presents the production requirements of apples, common berries, and honeybees. Plant or
species selection, growing requirements, disease prevention, and harvesting are discussed for each with the goal of competent and comprehensive management.

3 hours of lecture per week

**AGR 3111 Vegetable Production (3)**  
This course deals with the principles, production, management, and handling of vegetable crops in the context of modern commercial production systems.  
3 hours of lecture per week  
[Course fee: $25]

**AGR 4040 Agricultural Products (3)**  
This course explores basic processing methods, common marketing techniques, and laws pertaining to the sale of the most common Vermont farm products including milk, eggs, vegetables, fruits, cheeses, honey, fiber, and meats.  
3 hours of lecture per week

**AGR 4801 AGR Senior Summer Internship (0)**  
The student engages in an internship in an agricultural setting that includes grazing animals, farm machinery, and plant and animal production. Pass/No Pass.  
45 hours of internship minimum per term

**AGR 4802 AGR Senior Summer Internship Review (1)**  
The student documents and communicates their summer internship experience in AGR 4801. Pass/No Pass.  
1 hour of seminar per week  
Prerequisite: AGR 4801  
[Course fee: $250]

**Allied Health Science (AHS)**

**AHS 2011 Emergency Medical Service (5) fall/spring**  
This course follows the guidelines of the National Medical Service Blueprint for Education with approval and oversight by the Vermont Department of Health. It focuses on the assessment and management of medical emergencies and trauma in the prehospital environment and provides a foundation for understanding anatomy, physiology, pathophysiology, and emergency medical service operations through a series of lectures, small group activities, and skills labs. The student prepares to test for licensure with the NREMT, which is required to graduate from the Fire Science program. Those unable to attain certification within the time frame get an incomplete grade. If the student is unable to attain certification, a failing grade is given for the course. If the student is licensed under a Vermont EMS organization, the exam is $70. Pass/No Pass.  
4 hours of lecture, 4 hours of lab per week  
[Course fee: $200]

**AHS 2035 First Aid & CPR (2) fall**  
This course introduces first aid and basic principles of assessment and treatment of injury in the workplace. Scenarios and practice take place in outdoor and indoor workplace settings. The successful student can provide first responder stabilization, treatment, and CPR.  
4 hours of studio per week  
[Course fee: $75]

**Architectural Engineering Technology (ARE)**

**ARE 1000 ARE Freshmen Seminar (1) fall**  
This course provides a forum for the first-year student to learn about the program, related professions, and the building construction industry and highlights skills that facilitate a successful experience at the college.  
1 hour of seminar per week

**ARE 1011 Introduction to Construction Drawing Practices (3) fall**  
This course covers basic instruction in architectural and engineering construction graphics utilizing hand drawing equipment and CAD software and introduces residential construction materials. The student develops a set of drawings for a small residence in keeping with contemporary office practices.  
6 hours of studio per week  
[Course fee: $20]

**ARE 1210 Construction Materials & Methods (5) spring**  
This course is a comprehensive study of common construction materials and methods of fabrication and installation employed in building construction which covers sources, methods of manufacture, and uses of materials. There are two different studio sessions within this course: the materials lab sessions familiarize the student with physical characteristics and uses of materials, performance of standard tests, and preparation of technical reports. The design/drafting studio involves the detailing of construction assemblies, accurate hand sketches, and CAD.  
3 hours of lecture, 3 hours of lab, 3 hours of studio per week  
Prerequisite: ARE 1011  
[Course fee: $40]

**ARE 1220 Architectural History (3) fall/spring**  
Through photo slide lectures and seminars, the student discovers architectural design philosophies and
construction systems that have developed over the ages. Social, political, religious, and economic influences and technological advances are traced from the first significant works of humans 5,000 years ago through the present day. A major focus is western development since the eighteenth century, particularly in North America, and its significance to today’s society. Discussion seminars provide follow-up discussions of lectures with the objective of developing visual perception and knowledge of architectural styles and principles through the history of architecture.

3 hours of lecture per week

ARE 2022  Building Information Modeling  (3)  fall
This course covers advanced instruction in computer-aided drafting and design for architecture and building engineering. Building Information Modeling in Revit Architecture develops skills in the industry standard for 3D design. The student explores building design, presentation drawings, and renderings.
6 hours of studio per week  Prerequisite: ARE 1011  Corequisite: ARE 2051

ARE 2031  Environmental Systems I  (3)  fall
This course covers the natural environmental influences upon building design and construction as well as the principal internal necessities for human habitation, including sanitation; heating and ventilation; and mechanical requirements in small buildings. The studio reinforces the lectures by teaching the student to design plumbing and heating systems for a small residential scale building.
2 hours of lecture, 3 hours of studio per week  Corequisite: PHY 1042

ARE 2032  Environmental Systems II  (3)  spring
This is a continuation of ARE 2031. Broad-scale aspects of mechanical, electrical, and sanitary systems are investigated as they apply to larger buildings and groups of buildings. Other topics covered include electrical and lighting design; the impact that building codes and other regulations have on buildings; and current environmental topics.
2 hours of lecture, 3 hours of studio per week  Prerequisite: ARE 2031 or CPM 1010

ARE 2040  Construction Practices  (3)  fall
This course combines several distinct areas in the building construction industry. One part introduces fundamental surveying principles and methods: distance measurement, angular measurement, and elevation differences; instrument practice and care for levels; electronic distance measurement instruments; total station equipment; terminology; computations; developing site plans; and construction layout. Another part covers topics in construction estimates and records including estimating, takeoffs, and pricing for both residential and commercial construction. A third part explores construction management principles including scheduling practices, contracts, general conditions, and specifications.
2 hours of lecture, 3 hours of studio per week  Prerequisite: ARE 1210

ARE 2051  Architectural Design I  (3)  fall
In this course, the student develops individual design projects from conception to presentation under faculty supervision. Problem-solving and design process are taught and reinforced throughout the term with major emphasis on graphic techniques for design drawings. Building types studied range from small artifacts to small public buildings. Graphic and oral communication of goals, methods, and solutions are emphasized throughout. Some projects are presented to a jury of architecture faculty and practicing architects.
6 hours of studio per week  Prerequisite: ARE 1011, 1220  Corequisite: CPM 1010

ARE 2052  Architectural Design II  (3)  spring
This course is a continuation of ARE 2051. The design projects and problem-solving in this second term involve more complex buildings. The final project is a real-world building in Vermont. The student learns to work with zoning, building codes, and users while developing oral and graphic communication and presentation skills. The student works in a team on these projects to simulate real-world working dynamics. Projects are presented to a jury of architecture faculty and practicing architects.
6 hours of studio per week  Prerequisite: ARE 2051

ARE 2720  Architectural & Building Engineering Seminar  (1)  spring
This seminar concentrates on developing knowledge and skills used in the workplace and throughout the student’s career. Topics include job skills, continuing education, office practices, and soft skills.
1 hour of seminar per week

ARE 3010  Design Systems Integration  (3)  fall
This course concentrates the student’s design thinking in architectural engineering, particularly in the integration of environmental and structural systems into building design. It complements the architectural engineering technology curriculum by introducing the student to the design of sustainable low-energy systems in small buildings and providing tools for analysis in the schematic phase.
6 hours of studio per week  Prerequisite: ARE 3020, 3040, 4030

[Course fee: $20]

</thead>
<tbody>
<tr>
<td>ARE 3020</td>
<td>Structural Analysis</td>
<td>3</td>
<td>fall</td>
<td>This course covers the analysis of statically determinate and indeterminate structures, building on foundations from a statics course. Topics include deflection analysis; static determinacy and stability; reactions; and member forces and moments in beams, frames, and trusses (and possibly arches and cables) through determinate, indeterminate, and approximate methods. Computer applications for analysis are used. Topics such as matrix methods of analysis or dynamics/structural analysis may also be introduced. 3 hours of lecture per week</td>
</tr>
<tr>
<td>ARE 3030</td>
<td>Steel Structures Design</td>
<td>4</td>
<td>spring</td>
<td>This course covers structural loads (e.g., dead, occupancy, snow, wind, earthquake, rain, and ice) and the design of steel structures, including typical structural elements such as tension members, beams, columns, connections, open web joists, and deck systems. Designs are based on the AISC Steel Construction Manual using the load and resistance factor design methodology. Issues such as economics of construction and sustainability are also addressed. 4 hours of lecture per week</td>
</tr>
<tr>
<td>ARE 3040</td>
<td>Electrical/Lighting Systems</td>
<td>3</td>
<td>spring</td>
<td>This course familiarizes the student with the various electrical and lighting systems commonly found in modern buildings including lighting, power, communications, and emergency systems. It emphasizes design practices, safety/code issues, and coordination with other design professionals and building trades. 3 hours of lecture per week</td>
</tr>
<tr>
<td>ARE 4010</td>
<td>Concrete Structures Design</td>
<td>3</td>
<td>fall</td>
<td>This course covers the design of typical statically determinate and indeterminate concrete structures, sustainable engineering concepts, and an introduction to concrete masonry. It makes extensive use of the American Concrete Institute building code requirements and considers concrete and steel material properties, design approximations, design of concrete linear members (beams and columns), slabs, foundations, and walls. 3 hours of lecture per week</td>
</tr>
<tr>
<td>ARE 4020</td>
<td>Architectural Engineering Management</td>
<td>3</td>
<td>fall</td>
<td>This course covers many of the business, management, professional, and ethical subjects that architectural engineers and other infrastructure professionals may face during their careers such as legal issues; business organizational frameworks; personnel and diversity issues; business planning and decision making; marketing; scheduling; professional ethics; project and design cost issues (including engineering economics); information management; and technical presentation skills. The student develops communication skills and the ability to analyze management-related situations and create management-related documents. 3 hours of lecture per week</td>
</tr>
<tr>
<td>ARE 4030</td>
<td>HVAC Systems</td>
<td>5</td>
<td>spring</td>
<td>This course examines the basic concepts and practical applications of fluid mechanics and thermodynamics. Topics include fluid properties and measurement; energy conservation; pipe and duct flow; pumps and fans; the first and second laws of thermodynamics; refrigeration; psychrometrics; basic thermodynamic processes; and HVAC. 3 hours of lecture, 3 hours of lab per week</td>
</tr>
<tr>
<td>ARE 4040</td>
<td>Plumbing Systems</td>
<td>3</td>
<td>spring</td>
<td>A student in this course learns the basic practices and techniques for the design of plumbing systems in buildings using International Plumbing Code Commentary as a basis. Emphasis is on the design and calculations for sizing sanitary waste and vent systems; domestic hot and cold water systems; water heaters; storm drainage systems; and fire sprinkler systems, as well as fixture selection. Each topic includes discussions on materials and methods of construction and installation, code requirements, computer applications, specifications, and drafting symbols and standards. 2 hours of lecture, 3 hours of studio per week</td>
</tr>
</tbody>
</table>
| ARE 4050    | FE Exam Survey                       | 1       | fall       | This course provides the student with applications for and review of engineering, math, and science concepts to prepare for the Fundamentals of Engineering (FE) examination (primarily the “other disciplines” subject area) administered by most states as a first step toward professional licensure as a Professional Engineer. It touches on both previously studied topics and new topics that are generally easier to under-

100
stand and apply with limited explanation of background material. FE exam topics that are covered heavily in senior ARE courses (e.g., ethics and engineering economics) receive limited coverage. Strategies for studying for and taking the FE exam and similar examinations are covered, as is the application of engineering judgment in general.

3 hours of studio per week

ARE 4720 ARE Senior Project (4) spring
This is a capstone course in which the student typically prepares drawings; design or evaluation documentation; and presentations for a commercial-scale project based on preliminary and incomplete architectural plans (such as the ASHRAE national student competition building), an existing built structure, or other information. They work on electrical/lighting, mechanical, or structural systems or an integrated sustainable design of multiple systems and undertake a term-long final design in one subject area.

2 hours of lecture, 6 hours of studio per week Prerequisite: ARE 2022, 3030, 3040, 4010, 4020, 4030 [Course fee: $10]

Art History (ARH)

ARH 2110 Architectural Study Abroad (1) spring
Through location-specific architectural history preparation and travel to overseas locations, this course introduces the student to architectural design philosophies and construction systems that have developed throughout the ages. Each year, the destination cycles through locations such as Spain, England, Italy, Germany, and Greece.

1 hour of seminar per week for four weeks, 10 days of foreign travel [Course fee: $4,639]

ARH 2210 Architectural & Cultural Study Abroad (3) spring
This course immerses the student in the literature, art, and architecture of a foreign city through participation in coursework combined with a guided travel tour to an overseas location. The student uses visual perception and critical analysis to study the interconnected fields while expanding learning by experiencing works of art and architecture firsthand. The course reinforces the student’s understanding of topics in the history, culture, art, and architecture of the country studied. This is a cultural experience intended to enrich and broaden student perspectives in our increasingly global world.

1 hour of lecture, 1 hour of online instruction per week, 10 days of foreign travel [Course fee: $4,639]

Atmospheric Sciences (ATM)

ATM 1031 Meteorology I (3) fall
Meteorology is the scientific study of the atmosphere and weather events that interact with temperature, air pressure, water vapor, and time change across local, regional, and intercontinental geographies. This course provides the student with a foundation for understanding and applying weather factors to the safe operation of aircraft in preparation for the FAA knowledge exam for safe operation and for earning a Private Pilot certificate.

3 hours of lecture per week

ATM 1032 Aviation Meteorology II (4) spring
This course explores applicable weather conditions and how they impact aircraft operations, allowing for accurate analysis for both preflight and in-flight application. It builds on the basics as they apply to the dynamics of flight conditions: turbulence, icing, thunderstorms, and low visibility related to instrument flight operations. The student provides feedback on the effectiveness of interpretations by using web-based weather products.

3 hours of lecture, 2 hours of lab per week Prerequisite: ATM 1031

Automotive Technology (ATT)

ATT 1011 Suspension & Steering I (1.5) fall
This course is a comprehensive study of the theory, construction, and design of vehicle steering and suspension systems with emphasis on the geometry of links and levers; vehicle suspension requirements; vehicle handling and dynamics; and diagnosis of suspension problems.

2 hours of lecture, 3 hours of lab per week for the first half of the term [Course fee: $125]

ATT 1012 Suspension & Steering II (1.5) fall
This course is a continuation of ATT 1011.

2 hours of lecture, 3 hours of lab per week for the second half of the term Prerequisite: ATT 1011

ATT 1013 Preventative Maintenance (2) fall
This course covers development and administration of preventive maintenance programs. Topics include engine, transmission/transaxle, suspension, and steering and brake system general service and inspection procedures based on NATEF MLR tasks; supplemental tasks on shop/personal safety, tool, and equipment usage and maintenance; and preparing the vehicle for service and returning it to the customer.

1 hour of lecture, 3 hours of lab per week [Course fee: $125]
### ATT 1020  Engine Diagnostics & Repair  (4)  fall
This course is a comprehensive study of the theory, construction, design, and repair of the internal combustion engine. Topics include engine classification; power and torque development; engine power-efficiency tests; engine performance parameters; and mechanical design and failure analysis. The lab reinforces the lecture by providing engine performance diagnostic procedures, mechanical repair, and overhaul procedures. System problem diagnosis and component failure analysis are continually stressed. 3 hours of lecture, 3 hours of lab per week  
[Course fee: $125]

### ATT 1051  Alignment & Brakes I  (2)  spring
This course gives the student a thorough understanding of the theory, construction, and design of the mechanical devices utilized in tires; wheels and bearings; and hydraulic braking systems. Emphasis is on the geometry of links and levers; the physics of friction and hydraulics; vehicle braking requirements; vehicle handling and dynamics; wheel alignment procedures and equipment; and the diagnosis of brake problems. The course includes the curriculum necessary for successful completion of the Vermont state inspection certification test. Any student who is already certified receives credit for the inspection portion of the course. 3 hours of lecture, 3 hours of lab per week for the first half of the term  
Prerequisite: ATT 1012  
[Course fee:$125]

### ATT 1052  Alignment & Brakes II  (2)  spring
This course is a continuation of ATT 1051. 3 hours of lecture, 3 hours of lab per week for the second half of the term  
Prerequisite: ATT 1051

### ATT 1090  Automotive Electronics Lab  (1)  fall
This is the automotive lab for GTS 1120 which uses electrical test equipment to analyze and troubleshoot basic electrical circuits including warning systems, electrical accessories, and battery starting and charging systems. 3 hours of lab per week  
Corequisite: GTS 1120

### ATT 1110  Automotive Electrical Systems Lab  (1)  spring
This is the automotive lab for GTS 1040 which covers electrical systems and diagnostic and troubleshooting skills. Topics include the operation and testing of storage batteries, starting systems, charging systems, ignition systems, and basic accessory systems. The student becomes familiar with various types of test equipment, diagnostic charts, and vehicle wiring schematics. 3 hours of lab per week  
Corequisite: GTS 1040

### ATT 2010  Engine Performance  (4)  fall
This course covers fuel delivery systems in the internal combustion engine. Topics include engine air/fuel requirements, gasoline fuel injection systems, diesel fuel injection systems, vehicle emissions, emission controls, fuel-related problems, diagnosis of component failures, and verification of repairs. 3 hours of lecture, 3 hours of lab per week  
Prerequisite: GTS 1040; PHY 1030  
[Course fee: $125]

### ATT 2020  Body Electronic Systems  (4)  fall
This course covers commonly used body systems including heating, ventilation, and air conditioning; instrument panels; airbags; and antilock brakes. The student becomes familiar with system operation, diagnostic techniques, system failure analysis, and repair. The lab offers experience in diagnosis and repair of these systems as well as more practice in using electrical diagnostic techniques. 3 hours of lecture, 3 hours of lab per week  
Prerequisite:ATT1012;GTS1040;PHY1030  
[Course fee: $125]

### ATT 2030  Advanced Engine Performance & Fuel  (4)  spring
This course covers the electronic controls and devices used on the modern automobile power train. Topics include the theory, design, operation, and application of various domestic and foreign electronic control systems; analysis of system problems; diagnosis of system failures; component and system test procedures; sensors; emissions systems; advanced drivability diagnostics; exhaust gas analysis; and causes of premature component failure. 3 hours of lecture, 3 hours of lab per week  
Prerequisite: ATT 2010  
[Course fee: $125]

### ATT 2040  Automotive Drive Trains  (4)  spring
This course covers the principles of construction, design, and operation of mechanical devices used in the modern automotive drive train. Topics include helical and planetary gear drive systems; torque converters; hydraulic control systems; principles of electronically controlled transmissions; clutches; manual transmission and transaxles; drive shafts and axles; universal and CV joints; differentials; transfer cases; and problem diagnosis and component failure analysis. 3 hours of lecture, 3 hours of lab per week  
Prerequisite: ATT 1012  
[Course fee: $125]

### ATT 2060  Advanced Technology Vehicle  (4)  spring
This course introduces the design operation and servicing of electric, hybrid, alternative fuel, and fuel cell vehicles. Topics include basic physics- and chemistry-influenced design; motor and generator design and
utilization; hybrid electric design variations; maintenance and service; light-duty diesel; and CNG vehicles.
3 hours of lecture, 3 hours of lab per week  Prerequisite: GTS 1040
[Course fee: $125]

ATT 2801  ATT Summer Internship  (0)  summer
This course is a ten-week summer cooperative education experience. Pass/No Pass.
400 hours of internship per term

ATT 2802  ATT Summer Internship Review  (1)  fall
This course is a one-credit fall internship review. Pass/No Pass.
[Course fee: $250]  Prerequisite: ATT 2801

Biological Sciences (BIO)

BIO 1020  Introduction to Environmental Biology  (4)  fall
This course introduces the student to the fundamentals of environmental biology: the structure and biota of several aquatic and terrestrial ecosystems, including Vermont ecosystems. It includes spatial and temporal changes in ecosystems and species; critical observation and interpretation of landscapes; and communication skills, critical thinking, and teamwork. The student investigates why species occupy specific habitats.
3 hours of lecture per week, 4 hours of lab every other week  [Course fee: $10]

BIO 1030  Introduction to Nutrition  (3)  fall
This course introduces the student to the physiological basis of nutrition and evaluates dietary requirements with emphasis on metabolism, digestion, the nutrients used in the human body, and the nutrition involved in health, disease, and aging.
3 hours of lecture per week

BIO 1040  Principles in Biology  (4)  fall
This course imparts a general knowledge of biology from the molecular level to whole systems. Topics include cell chemistry, evolution, genetics, ecology, diversity, and population dynamics. When applicable, the class focuses on biological aspects of Vermont.
3 hours of lecture, 3 hours of lab per week  [Course fee: $10]

BIO 1220  Botany  (4)  spring
This course covers the fundamentals of plant growth and development, including higher plant structure, metabolism, growth regulators, and mineral nutrition. The student becomes acquainted with the diversity of plants and plant-like organisms through the study of bacteria, viruses, algae, fungi, mosses, and lower vascular plants.
3 hours of lecture, 3 hours of lab per week

BIO 1241  Introduction to Forest Ecology  (4)  fall
In this course, the student learns the functions of a forest ecosystem, tree identification, silviculture practices, and the significance of natural communities such as vernal pools and wetlands. A central component of the course is a lab that studies the natural communities that comprise Vermont forests.
3 hours of lecture, 3 hours of lab per week  [Course fee: $25]

BIO 2011  Human Anatomy & Physiology I  (4)  as required
This is the first of two courses which examine the structure and functions of the human body. Topics include fundamental principles of cell and tissue structure; gross anatomical and physiological organization; electrochemical communication systems; and muscle physiology. Prior successful completion of basic algebra and chemistry or biology courses is recommended.
3 hours of lecture, 3 hours of lab per week

BIO 2012  Human Anatomy & Physiology II  (4)  as required
This is a continuation of BIO 2011 which examines the structure and functions of the human body. Topics include special senses, blood, and the endocrine, cardiovascular, respiratory, digestive, urinary, and reproductive systems.
3 hours of lecture, 3 hours of lab per week  Prerequisite: BIO 2011

BIO 2030  Plant Pathology  (3)  spring
In this course, the student explores the organisms and environmental factors that cause plant diseases; extensively studies the biology of fungi, bacteria, and viruses, including their life histories; examines a systematic approach to discovery and identification of plant disease; and learns to recognize disease symptoms. Methods of disease management are covered with emphasis on bio-rational techniques.
2 hours of lecture, 3 hours of lab per week  Prerequisite: BIO 2040

BIO 2040  Entomology & Ecological Pest Management  (3)  fall
This course examines the biology and management of insect and other invertebrate pests that attack ornamental plants. The student studies insect morphology, anatomy, life processes, and ecology with special emphasis on insect identification and life histories and explores management strategies as part of
an integrated approach to pest management.

2 hours of lecture, 3 hours of lab per week

**BIO 2120 Elements of Microbiology (4)** asrequired
This course is a comprehensive study of the basic principles of microbiology with a brief survey of the history of the science. It offers the student an opportunity to examine organisms that are too small to see with the naked eye with emphasis on understanding the variety of and differences in microbes and their relationship to humans. Prior successful completion of BIO 2120 is recommended.

3 hours of lecture, 3 hours of lab per week

[Course fee: $10]

**BIO 2320 Zoology (4)** fall
This course acquaints the student with the fundamental concepts of animal biology, including molecular genetics and inheritance, evolution, and biological systems with an emphasis on vertebrates. Prior successful completion of courses in biology and chemistry is recommended.

3 hours of lecture, 3 hours of lab per week

**Business (BUS)**

**BUS 1341 Exploring Business & Entrepreneurship (3)** fall
This course surveys the key characteristics and terminology of the interconnected disciplines of economics, ethics, entrepreneurship, management, marketing, accounting, operations, and information technology. It allows the student to discuss business ethical issues and to explore the opportunities and challenges of starting a new business. It facilitates college success strategies and use of college resources and introduces the student to assignments typical of higher-level business courses with the goal of developing effective oral and written communication, critical thinking, problem solving, interpersonal skills, and ethical behavior.

3 hours of lecture per week

**BUS 2020 Principles of Management (3)** fall
This course introduces the philosophy, principles, and techniques of management. The student examines classical, modern, and emerging concepts as they relate to today’s manager and the functional processes of planning, organizing, directing, and controlling resources. Learning experiences may include case studies, team experiences, and simulations.

3 hours of lecture per week

**BUS 2041 Foundations of Entrepreneurship (3)** fall
This course explores the nature, challenges, and rewards of entrepreneurship, which is approached as a special and unique way of thinking and behaving and a predictable and manageable process applicable to profit, non-profit, and public organizations.

3 hours of lecture per week

**BUS 2131 Writing for Electronic & Social Media (3)** asrequired
This course examines the history of electronic communication and social media and their roles in society and business. It integrates components of communication, sociology, marketing, and analytics and focuses on how individuals and organizations can maximize potential and minimize drawbacks. The student analyzes the impact of electronic communication; writes typical business content, has a role in marketing, or pursues an entrepreneurial venture and also reviews grammar guidelines and research techniques. They reflect on the impact of social media on individuals and on the consumer experience and discuss the ethical, cultural, global, and professional effects.

3 hours of lecture per week

**BUS 2140 Personal Finance (3)** asrequired
The heart of personal financial planning is making sure that your values line up with how you spend and save. This course removes the mystery from the personal financial planning process and replaces it with the tools needed to take charge of personal finances and life. Personal financial planning provides major benefits that help marshal and control financial resources more effectively and facilitate an improved standard of living. Because the emphasis in this course is on planning, it examines various areas to set and implement plans aimed at achieving financial goals. These areas include using financial statements and budgets; managing basic assets, credit, insurance needs, and investments; and planning for retirement.

3 hours of lecture per week

[Course fee: $10]

**BUS 2210 Small Business Management (3)** fall/spring
This course explores the practical aspects of organizing and managing a small business. It covers the basic concepts of accounting, finance, cash management, business law, government regulations, taxes, and marketing. The student gains the knowledge necessary to make informed business decisions by examining how to analyze a business and improve its management.

3 hours of lecture per week

[Course fee: $10]

**BUS 2230 Principles of Marketing (3)** spring
This course examines the role of marketing as it relates to manufacturing, wholesale, retail, and service
businesses. Emphasis is on the marketing mix of product, place, promotion, and price. The student learns marketing strategies well-suited to small business.

3 hours of lecture per week

[Course fee: $10]

**BUS 2270  Organizational Communication (3) as required**

This class offers a hands-on approach to learning the roles, processes, and skills of interpersonal, group, and public communication in personal and professional settings. The student understands the role of people in the communication process, both individually and in groups, and learns the psychology of face-to-face communication, the role of non-verbal communication, teamwork, effective listening, and professional behavior and then plans, prepares, and presents team oral presentations.

3 hours of lecture per week

[Course fee: $65]

**BUS 2410  Human Resource Management (3) spring**

This course introduces the student to the field of human resource management (HRM). Coverage is broad and emphasizes selecting, training, and evaluating personnel; wages, benefits, and bargaining units; motivation, morale, and human relations; and personnel problems in the workplace. The course emphasizes a general management perspective of HRM. Specifically, rather than assuming that the student wants to become an HR professional, we examine HRM from the perspective of a manager who wishes to effectively interact with and utilize human resources.

3 hours of lecture per week

**BUS 2440  Introduction to Business Law (3) fall/spring**

This course familiarizes the student with the law as it relates to business. Following a review of the legal and constitutional environment of business, the course focuses on contract law; the Uniform Commercial Code; negotiable instruments; debtor and creditor rights; bankruptcy; and agency relationships.

3 hours of lecture per week

[Course fee: $10]

**BUS 2350  Effective Leadership (3) spring**

This course focuses on the development of leadership ability by providing a basic understanding of leadership and group dynamics theory, including goal setting, decision making, problem solving, delegation, motivation, and performance evaluation. The student develops a personal philosophy of leadership; an awareness of the moral and ethical responsibilities of leadership; and an understanding of their own ability and style of leadership.

3 hours of lecture per week

**BUS 2820  Business Internship & Career Seminar (3) as required**

This course blends the reflective nature of classroom learning with the applied nature of the workplace and focuses on the role and importance of work in society, the impact of work, and work-life balance in one's personal and professional life. Readings and online forum discussions examine topics such as matching skills and interests to career paths; job search and interview techniques; physical, emotional, and financial well-being; work/life balance; dealing with difficult people; organizational politics; and ethical implications of decisions and actions. The student creates a resume, cover letter, and LinkedIn profile and learns effective job search and interview techniques.

3 hours of lecture per week

**BUS 3041  Applied Entrepreneurship (3) fall**

This course takes the fundamentals of entrepreneurship and applies them to business cases and fieldwork. It is divided into two sections: creating and pitching a new business concept and evaluating an existing entrepreneurial venture through fieldwork. The student works in a team to create, evaluate, and develop a concept for a new entrepreneurial venture for either a profit or non-profit mission. They also engage in fieldwork with an existing organization engaged in entrepreneurial activities. Organizations may be identified by the student or through client-based service providers (VT SBDC, VMEC, United Way, VBSR).

3 hours of lecture per week

**BUS 3150  Production & Operations Management (3) fall**

This course provides an overview of the concepts, methodologies, and applications of production and operations management as an evolving discipline with roots in industrial engineering, behavioral theories of management, quantitative methods, and other functional areas of business.

3 hours of lecture per week

Prerequisite: MAT 2021

**BUS 3230  Principles of Financial Management (3) fall**

This course teaches the student to use accounting data to make financial decisions. They learn decision-making techniques and use them to address financial situations faced by a firm.

3 hours of lecture per week

Prerequisite: ACC 1020 or 2121

[Course fee: $10]

**BUS 3250  Organizational Behavior & Management (3) spring**

This course provides an understanding of the structure and function of human behavior in organizations and explores the behavioral influences impacting productivity, organizational effectiveness, and efficiency.
Behavior is examined at the individual, small group, and organizational levels. Topics include perception, motivation, negotiation, decision-making, communication, job design, power, politics, and organizational culture.

3 hours of lecture per week  
Prerequisite: BUS 2020

**BUS 3260  Investments & Portfolio Management** (3)  as required
This course examines investments in stocks, bonds, government securities, options, and collectibles. Topics include investment setting; securities valuation and analysis; security markets and regulations; and portfolio constraints.

3 hours of lecture per week  
Prerequisite: BUS 3230

**BUS 3410  Business Ethics** (3)  fall
This course introduces the student to the general field of ethics and teaches them to apply ethical thinking to the business environment. It provides an overview of modern ethical thought and presents specific cases and scenarios which the student assesses from legal, moral, and economic perspectives.

3 hours of lecture per week  
Prerequisite: BUS 2020

**BUS 3721  Business Planning Seminar** (3)  spring
This course teaches how to estimate market potential for a business idea and provides a realistic experience in preparing a business plan that attracts lenders or investors. It emphasizes the importance of market research and collection of the information necessary to establish the viability and sustainability of a business idea. There is heavy emphasis on knowing the target market, analyzing competition, and anticipating how the external environment affects a business. The student should already have a business idea or a technology to develop. During the term, they repeatedly defend their ideas with peers and invited guests. The development and presentation of a sound business plan is the final product.

3 hours of seminar per week  
Prerequisite: BUS 2210, 3230

**BUS 3811  Business Problem Practicum** (3)  spring
This course serves as both a practice and a capstone in team research and presentations, integrating skills and knowledge developed through previous coursework. The student works in a team to select a business topic for research and oral presentation. Where appropriate and with the instructor’s approval, they may select a client-based problem. Teams present a significant business problem, offer proof of the problem, recommend solutions, and give evidence that the solutions help solve the problem. A team oral presentation is the final product.

3 hours of lecture per week

**BUS 4080  Business Strategy & Policy Development** (3)  as required
This capstone integrates knowledge gained throughout the program and applies it to a variety of business case studies, concentrating on the total enterprise and its environment. The student assumes the functions and responsibilities of senior management, addresses the crucial problems that affect success in the organization, and makes decisions that determine the direction and future of the organization. They engage in strategy formulation and development and the administration of those strategies through policies, structures, and initiatives. The course may include case studies, simulations, team projects, and presentations.

3 hours of lecture per week

**BUS 4310  Business Information Architecture** (3)  spring
In this course, the student learns and applies theory, process, design, and development to create effective, user-centered written and electronic communications. The course focuses on the convergence of communication technology and tools and the impact on business applications such as letters, email messages, instant messages, podcasts, and a variety of social media. The student designs and creates an online portfolio to showcase education, skills, abilities, and experience for a job search.

3 hours of lecture per week

**BUS 4530  Technical Project Management** (3)  spring
This course introduces the student to the field of project management. Coverage is broad and emphasizes and follows the Project Management Institute model of project management.

3 hours of lecture per week

**Civil & Environmental Engineering Technology (CET)**

**CET 1000  CET Freshman Orientation** (1)  fall
This course introduces the skills required for success in the Civil & Environmental Engineering Technology program. The course features guest speakers and field trips to construction projects and public facilities that give the student a picture of the variety of work and the job opportunities in the field. Pass/No Pass

2 hours of seminar per week for the first half of the term

**CET 1011  Surveying I** (3)  fall
This course introduces fundamental surveying principles and methods including benchmark leveling; the measuring of distances and angles; and instruction and practice in the care and use of equipment. Areas covered are azimuths and bearings; coordinate geometry; cross-sections and profiles; note-keeping; computations and field practice related to traverses; introduction to total stations and point files; and the adjustment of surveying instruments. The basics of construction surveying are discussed.

2 hours of lecture, 3 hours of lab per week  
Corequisite: MAT 1311
In this course, the student studies and tests the materials used in the design and construction of civil engineering projects including soil, aggregates, cements, concrete, timber, asphalt, steel, masonry, and special topics (glass or geotextiles). Sources, manufacture, transport, standard tests, best use, and environmental considerations are covered. Lab work involves testing of materials and technical reporting.

2 hours of lecture, 3 hours of lab per week

[Course fee: $35]

This course focuses on the use of computers in civil and environmental engineering and introduces Excel and CAD operation for engineering applications. It presents the fundamentals of CAD operations through the use of topics including site, structural, and environmental drawings. Major graphic subjects include creating and editing CAD primary and complex entities, dimensioning, drawing construction, layout, and output. It introduces spreadsheets using including calculations, quantities, estimates, and graphs.

6 hours of lab per week

[Course fee: $35]

This course is a continuation of CET 1031 which provides proficiency in creating and understanding working drawings related to civil engineering. CAD topics include advanced CAD entity manipulation, customization, and programming. The student is introduced to a civil survey software package used for site mapping, terrain modeling, and road and utility design in addition to related technologies such as Geographic Information Systems, their applications, and data sources.

6 hours of lab per week

Prerequisite: CET 1031

This course gives additional and more detailed information in route location and design, construction surveying, and advanced surveying topics. State-of-the-art total stations are used in the field labs. Traverse adjustment is introduced. Interfacing total stations with COGO surveying software is an integral portion of the course.

2 hours of lecture, 6 hours of lab per week

Prerequisite: CET 1011, 1032

Corequisite: MAT 1520

This course introduces the fundamental concepts of fluids and the applications of flow mechanics in civil and environmental engineering projects. Topics include open channel flow, precipitation, stormwater runoff, infiltration, groundwater, watershed drainage systems, measuring devices, buoyancy, and steady flow. Calculations and lab work involve the use of precipitation data; culvert and stormwater system design; flume and hydraulic bench experiments; and the use of current industry standard computer programs.

2 hours of lecture, 3 hours of lab per week

Prerequisite: MAT 1312; PHY 1041

Corequisite: MAT 1520

This course emphasizes quantitative analysis of environmental problems and introduces engineering methods for treatment and prevention of water, soil, and air pollution. It covers fundamental concepts of chemistry, microbiology, ecology, and statistics, which are critical to environmental analysis and engineering design. The lab includes both field and indoor testing of water quality as well as field trips to environmental facilities.

2 hours of lecture, 3 hours of lab per week

Prerequisite: CHE 1031; MAT 1520; PHY 1041

This course involves the study of vector forces, resultants, and moments and their effect on beams, columns, frames, and trusses. Strength of materials includes the study of material properties; tension; compression; shear and bending stresses; and the general mechanical response of materials and members to loads and the environment. This course includes methods of determining centroids and moment of inertia. Lab work includes calculation of force and stress analysis in addition to material testing.

3 hours of lecture, 3 hours of lab per week

Prerequisite: PHY 1041

Corequisite: MAT 1520

This course provides experience with realistic civil engineering technology problems that require the use of knowledge and skills obtained in previous courses. Under faculty supervision, the student designs a project that could include site development plans; buildings and parking structures; bridges; water supply and treatment facilities; or roads and highways. The student develops graphic presentations, preliminary designs, calculations, and working drawings. The final phase of some projects may include estimating and construction scheduling.

2 hours of lecture, 6 hours of lab per week

Prerequisite: CET 2012, 2020, 2030

Corequisite: CET 2110, 2120

This course covers the basic principles and applications of soil mechanics used in design and construction and introduces soil and its formation, actions, and uses. It includes studies of index properties; soil clas-
sification; exploration and sampling; compaction; soil strength; erosion control; foundations; and retaining walls. Problems relating to these items are presented and solved and the student prepares an individual technical report of each test performed.

2 hours of lecture, 3 hours lab per week Prerequisite: CET 2040

CET 2120 Structural Design (3) spring
This course presents the design of structural systems, focusing on solid sawn wood and engineered wood products. Structural loads, general framing concepts, structural drawings, and (primarily) wood structural systems are presented. The design of various wood structural configurations such as tension members, beams, columns, and connections is covered in accordance with relevant design codes. Structural foundations are introduced. Lab work consists primarily of the application of building and design codes to the design and analysis of structural systems.

2 hours of lecture, 3 hours lab per week Prerequisite: CET 2040

Chemistry (CHE)

CHE 1020 Introduction to Chemistry (4) as required
This survey course examines atomic structure; the periodic table; chemical reactions; gases; liquids; solids; chemical equilibrium; acids and bases; bonding; and molecular structure and introduces organic chemistry.

3 hours of lecture, 2 hours of lab per week.

Che 1031 General Chemistry I (4) as required
This course for the engineering student consists of the fundamentals of general and physical chemistry. Lab experiments reinforce concepts introduced in lectures; teach basic laboratory skills and techniques; and introduce some methods of analysis currently used in industry with emphasis on fundamental quantitation and analytical techniques.

3 hours of lecture, 3 hours of lab per week

CHE 2060 Principles of Organic Chemistry (4) spring
This course enhances knowledge and skills in organic chemistry and includes a general overview of aliphatic compounds (hydrocarbons, alcohols, ethers, aldehydes, ketones, carboxylic acids, carbohydrates); cyclic compounds; and combinations of aliphatic and cyclic structures (including amino acids and nucleic acids). Important areas of organic chemistry are covered, including polymerization, hydrogenation, isomerization, photochemistry, and stereochemistry.

3 hours of lecture, 3 hours of lab per week Prerequisite: CHE 1031

Computer Science (CIS)

CIS 1041 Computer Applications (3) fall
This course introduces information processing using the Windows operating system and application software designed for computers and mobile devices. The course covers file management, presentation graphics, word processing, and spreadsheets. Basic algebra skills are recommended.

3 hours of lecture per week

CIS 1042 Computer Applications II (3) spring
In this course, the student learns advanced information processing skills using the Windows operating system and common applications for business including word processing, spreadsheets, database management, presentation graphics, publishing, and digital image manipulation.

3 hours of lecture per week Prerequisite: CIS 1041

CIS 1050 Introduction to Spreadsheets (1) fall/spring
This course covers the concepts, knowledge, and skills necessary to design, create, organize, store, and utilize spreadsheets. The student explores concepts and skills such as user-made functions, translation to graphs, using library macros, user macro development, and what-if scenarios with hands-on real world settings. The successful student can generate and use spreadsheets to process information rapidly in virtually any setting and performs as a professional in the workplace.

1 hour of lab per week

CIS 1120 Introduction to Information Science & Technology (3) fall
This course introduces the student to the world of information science and technology across a broad range of topics including the history of computing, computing in society, career paths in computing, and the use of computers in the workplace.

3 hours of lecture per week

CIS 1151 Website Development (3) fall/spring
This course introduces webpages for commercial websites including use of and design with Hypertext Markup Language (HTML), text, and graphics; applying appropriate design, color, and art; size and placement of graphics (including image maps) in a webpage; creation of advanced tables (including nested tables); creation of forms that contain advanced input types and attributes, text areas, and advanced lists;
**CIS 1152** Advanced Website Development (3) **spring**  
This course teaches the student implementation, monitoring, and deployment of a complete website and integration of the website with a database. Emphasis is on the PHP language and server side processing. JavaScript is used when it's suited to the desired task. Topics include authentication methods; form processing; form validation using HTML 5, JavaScript, and PHP; an overview of databases; PHP functions to interface with a database; and website security.  
2 hours of lecture, 2 hours of lab per week  
Prerequisite: CIS 1151

**CIS 2020** Computer Organization (4) **spring**  
In this course, the student gains a basic understanding of computer hardware through introduction to binary data representation, pointers, and memory through the C programming language. This knowledge expands to include the functioning of the CPU including registers, ALU, and simple I/O and culminates in an introduction to assembly language.  
3 hours of lecture, 2 hours of lab per week  
Prerequisite: CIS 2025 or 2262 or 2271 with a C- or better  
Corequisite: CIS 1120 or MAT 2120

**CIS 2260** Object-Oriented Programming (3) **fall**  
This course introduces the student to strong specifications and abstract data types in object-oriented programming as well as the basics of object-oriented design.  
3 hours of lecture, 2 hours of lab per week  
Prerequisite: CIS 2261 or 2271 with a C- or better

**CIS 2262** Introduction to Java Programming II (3) **spring**  
This course is a continuation of CIS 2261 and covers additional concepts in object-oriented programming such as inheritance and polymorphism; exceptions and exception handling; the Java collections framework (lists, sets, maps, and iterators); creating and using packages; and creating graphical user interfaces.  
3 hours of lecture per week  
Prerequisite: CIS 2261

**CIS 2271** Java Programming (4) **fall**  
This course introduces the basic concepts and techniques of Java, including object-oriented programming (OOP). Essential topics include program structure; primitive and string data types; operators; expressions; control structures; static methods; and classes and objects.  
3 hours of lecture, 2 hours of lab per week  
Prerequisite: CIS 2261
covers the basics of graphical user interface construction.

3 hours of lecture, 2 hours of lab per week

CIS 2320  Software Quality Assurance & Testing (3)  fall
This course introduces the concepts, techniques, and tools used for evaluating and ensuring the quality of computer software. Topics include dimensions and implications of quality, code reviews, test construction, test coverage metrics, partition testing, website testing, and current test support tools, including issue tracking systems.
3 hours of lecture per week  Prerequisite: CIS 2025 or 2262 or 2271 with a C- or better

CIS 2450  Advanced Web Technologies (3)  spring
This course introduces advanced use of web technologies methods and practices. Discussion includes the use of technologies such as JavaScript, jQuery, CSS preprocessors, web APIs, and major web development frameworks which are all implemented in the lab.
2 hours of lecture, 2 hours of lab per week  Prerequisite: CIS 1151

CIS 2730  Software Engineering Projects (3)  spring
This capstone course involves the development of a group project. The development effort is combined with an introduction to systems development and life cycle. The student receives an introduction to oral presentations of technical information to a technical audience.
2 hours of lecture, 2 hours of lab per week  Prerequisite: CIS 2025 or 2262 or 2271 with a C- or better

CIS 2730  Software Engineering Projects (3)  spring
This capstone course involves the development of a group project. The development effort is combined with an introduction to systems development and life cycle. The student receives an introduction to oral presentations of technical information to a technical audience.
2 hours of lecture, 2 hours of lab per week  Prerequisite: CIS 1151

CIS 3010  Database Systems (4)  spring
This course covers methods for designing relational databases; the use of SQL to define and access a database; and the use of production-level database management systems to implement a relational database system. The student completes a project in which they either implement a real-world example relational database or research a specific database topic not covered during class. Additional topics that may be discussed include integrating databases into applications or websites; alternative database paradigms; database design/engineering tools; and underlying implementation of databases.
3 hours of lecture, 2 hours of lab per week  Prerequisite: CIS 2025 or 2262 or 2271 with a C- or better

CIS 3012  C++ Programming (3)  spring
This course covers the syntax and semantics of the major C++ features. Topics include data abstraction, object-oriented programming, and generic programming, including the use of the standard template library. C++ 2011 is used and features added to that standard are described. Discussion of C++ best practices and design techniques is incorporated throughout.
3 hours of lecture per week  Prerequisite: CIS 2010 or 2025; CIS 2260

CIS 3030  Programming Languages (3)  fall
This course covers fundamental concepts in programming language design from the perspective of the practical programmer. Topics include the syntactic representation of programs; functional programming; static vs. dynamic programming languages; selected advanced object oriented topics; and an introduction to the theory of computation as it applies to programming languages. The student gains useful experience with at least two new languages: one the focus of the instructor and one chosen by the student for a project.
3 hours of lecture per week  Prerequisite: CIS 2260
Corequisite: CIS 3050

CIS 3050  Algorithms & Data Structures (3)  fall
This course focuses primarily on the implementation of various important algorithms and data structures. It contains some theory, but the theory content is minimized in favor of a more rigorous treatment of implementation techniques. The course covers classic topics such as lists, trees, hash tables, graphs, sorting, and string matching. Other topics such as encryption, data compression, and image processing are covered as time allows.
3 hours of lecture per week  Prerequisite: CIS 2010; CIS 2025 or 2260

CIS 3152  Network Programming (3)  asrequired
This course includes topics such as client/server programming with sockets for TCP and UDP; programming at least one application level protocol such as HTTP or SMTP/MIME; an introduction to character sets; and at least one remote procedure call system (ONC RPC, Ice, etc.) An introduction to XML and the use of XML libraries is also presented. Proper error handling techniques are discussed throughout.
3 hours of lecture per week  Prerequisite: CIS2151; CIS 2010 or 2025; CIS 2262 or 2271

CIS 3170  The History of Computation (3)  fall
In this course, the student learns the principles of early computational devices and investigates how the concepts inherent in these devices are implemented in modern computers. Particular attention is focused on Boolean logic, Frege formula language, flow charts, state machines, and Turing machines. The implications of Shannon’s law and Moore’s law are presented.
3 hours of lecture per week

CIS 3210  Network Routing & Switching Concepts (4)  fall
This course teaches the operation and configuration of routers and switches in a network architecture. Concepts such as virtual LAN (VLAN) configurations; routing concepts; inter-VLAN routing; static routing;
introduction to OSPF; access control lists and implementation; and configuration of DHCP and NAT in a network configuration are covered along with IPv4 and IPv6 concepts.

3 hours of lecture, 2 hours of lab per week  
Prerequisite: CIS 2151

CIS 3250 Advanced Network Architectures (4)  
In this course, the student implements, monitors, deploys, and maintains a network in a converged enterprise environment. It covers the secure integration of VLANs, WLANs, security, and video into networks and network implementations such as HSRP, STP, EtherChannel, wireless technologies, advanced OSPF, EIGRP, and frame relay. The student plans, configures, and verifies the implementation of complex enterprise switching solutions.

3 hours of lecture, 2 hours of lab per week  
Prerequisite: CIS 2151

CIS 3272 Advanced Java (3)  
This course covers the more advanced languages features and libraries available in Java.

3 hours of lecture per week  
Prerequisite: CIS 2151

CIS 3310 Artificial Intelligence (3)  
This course examines the algorithms and data structures used in artificial intelligence and programs as a range of approaches that computers use to emulate intelligence: planning, knowledge representation, learning, decision-making, and game-playing.

3 hours of lecture per week  
Prerequisite: CIS 2260

CIS 4011 Information Warfare (3)  
This course is a strategic level examination of the use of the information instrument of national power. Topics covered include cyberspace operations, computer network operations, information operations, military strategy, and civil military relations.

3 hours of lecture per week  
Prerequisite: CIS 2151, 2230

CIS 4020 Operating Systems (4)  
This course examines the internal workings of modern operating systems. Topics include multiprocessing, memory management, file systems, device drivers, distributed operating systems, and real-time operating systems. The student writes a kernel module or a device driver for a system chosen by the instructor.

3 hours of lecture, 2 hours of lab per week  
Prerequisite: CIS 3050

CIS 4040 Computer Security (3)  
This course focuses on security issues associated with computers and computer networks. Topics include cryptography (symmetric and public key cryptography, digital signatures, secure hashes, random number generation, and message authentication codes); network security (secure protocols [SSL/TLS, IPsec], network attack methods, network authentication protocols [Kerberos], and firewalls); and host security (building secure software, auditing, and intrusion detection).

3 hours of lecture per week  
Prerequisite: CIS 2151, 2230; CIS 2025 or 2262 or 2271 with a C- or better

CIS 4120 Systems Analysis & Design (3)  
This course advances the student’s skills to develop, refine, and communicate requirements and designs related to computer systems. This course is reading- and writing-intensive.

3 hours of lecture per week  
Prerequisite: CIS 3210 or 3250

CIS 4140 Human Computer Interaction (3)  
This course covers the design, implementation, and evaluation of user interfaces for computers and other modern, complex electronic equipment.

3 hours of lecture per week  
Prerequisite: CIS 1152 or 2260

CIS 4210 Computer Graphics (3)  
This course deals with the computer generation of realistic images of 2- and 3-dimensional scenes and
**Course Descriptions**

involves substantial computer programing.

3 hours of lecture per week  
Prerequisite: CIS 3050; MAT 1520

**CIS 4220  Physical Simulations (3)**  
as required
This course combines numerical programming techniques with Newtonian physics and calculus to give the student an understanding of how physical systems can be simulated on a computer. Topics include the simulation of rigid bodies, soft bodies, fluids, and collision detection. This course emphasizes applications rather than mathematical theory and involves a significant amount of programming.

3 hours of lecture per week  
Prerequisite: CIS 2025, 2262, or 2271 with a C- or better; MAT 1520; PHY 1041

**CIS 4230  Parallel Programming (3)**  
as required
This course examines the applications, algorithms, construction, configuration, and performance of parallel programs. Topics include shared memory parallelism using POSIX threads and OpenMP and multithreaded parallelism using MPI. Parallel programming on modern GPU devices is introduced.

3 hours of lecture per week  
Prerequisite: CIS 2230, 3050

**CIS 4240  Ethical Hacking & Network Defense (3)**  
fall
This course teaches the student to protect systems from common hacker attacks using both Windows and Linux systems. The student learns legal restrictions and guidelines and abides by them. They perform hands-on exercises which emphasize and enforce skills such as attacking and defending; using port scans; footprinting; exploiting Windows and Linux vulnerabilities; buffer overflow exploits; SQL injection; privilege escalation; MAC spoofing; and backdoor attacks.

3 hours of lecture per week  
Prerequisite: CIS 2151

**CIS 4241  Advanced Ethical Hacking (3)**  
as required
This course explores advanced cyber technology threats and tactics and covers the employment of advanced tactics in the context of a penetration test. Topics include planning, web threats, mobile threats, wireless hacking, protocol abuse, malware creation, social engineering, and evasion of defensive tools.

3 hours of lecture per week  
Prerequisite: CIS 4240

**CIS 4250  Big Data Processing (3)**  
as required
This course describes techniques for processing very large data sets that are typically stored across multiple machines in a cluster. It's primarily a programming course, although some topics in cluster administration and configuration are also discussed. Technologies covered include Hadoop (MapReduce), Apache Spark, Apache Kafka, and other specialized technologies as time allows (e.g., Pig). Fluency with Java is required; experience with Scala is helpful but not essential.

3 hours of lecture per week  
Prerequisite: CIS 2230, 3030

**CIS 4310  Computer Forensics (3)**  
fall
This class introduces digital forensic methods, practices, technology, and legal concerns. The student considers issues of incident response and handling, data collection, chain of evidence, data analysis, cryptanalysis, steganography, and report writing.

3 hours of lecture per week  
Prerequisite: CIS 2151, 2230

**CIS 4721  CIS Senior Project I (2)**  
fall
The course is largely a self-directed senior project in which the student demonstrates mastery of the subjects covered in their program. This first part of a two-part course sequence, this first term involves defining the eventual project and learning necessary technologies.

1 hour of lecture, 2 hours of lab per week

**CIS 4722  CIS Senior Project II (3)**  
fall/spring
This course completes the senior project from CIS 4721 and culminates in a public presentation of the project.

1 hour of lecture, 4 hours of lab per week  
Prerequisite: CIS 4721

**CIS 5020  Advanced Operating Systems (4)**  
fall
This course examines the internal workings of modern operating systems. Topics include multiprocessing, memory management, file systems, device drivers, distributed operating systems, and real time operating systems. The student writes a kernel module or a device driver for an operating system chosen by the instructor.

3 hours of lecture, 2 hours of lab per week

**CIS 5050  Advanced Data Structures & Algorithms (3)**  
as required
This course prepares the graduate student to understand, implement, and analyze sophisticated algorithms and data structures.

3 hours of lecture per week  
Prerequisite: CIS 3050

**CIS 5080  Advanced Network Security (3)**  
fall
In this course, the student learns to implement, monitor, deploy, and maintain a secure network; implement on Cisco routers (AAA, IP-sec, secure Layer 2 technologies); implement firewall technologies; IDS and IPS fundamentals; and mitigation technologies for email, web-based, and endpoint threats. Comprehensive assignments using the Cisco Packet Tracer network simulator emphasize hands-on learning.

3 hours of lecture per week  
Prerequisite: CIS 2151
CIS 5120  Advanced Systems Analysis & Design  (3)  spring
This course advances the student's skills to develop, refine, and communicate requirements and designs
as related to computer systems. This course is reading- and writing-intensive.
3 hours of lecture per week

CIS 5130  Analysis of Software Artifacts  (3)  fall
In this course, the student analyzes the range of artifacts created during the software development pro-
cess, ranging from requirements and design documents through source code and test results. The ap-
proaches covered include both heuristic and formal analyses.
3 hours of lecture per week  Prerequisite: CIS 4050, 4120, 4150

CIS 5140  Software Architecture  (3)  spring
This course is a detailed consideration of software design from the high-level perspective. The student ex-
amines a range of distinct architectural styles, considering their appropriateness for a range of problems.
3 hours of lecture per week  Prerequisite: CIS 4120, 4150

CIS 5150  Advanced Software Engineering  (3)  fall
This course covers the product life cycle for a software product. Topics include common current practices
in a variety of industrial settings as well as more recent leading-edge advances.
3 hours of lecture per week

CIS 5210  Advanced Computer Graphics  (3)  as required
This course deals with the computer generation of realistic images of 2- and 3-dimensional scenes and
involves substantial computer programing.
3 hours of lecture per week  Prerequisite: CIS 3050; MAT 1520

CIS 5220  Advanced Physical Simulations  (3)  as required
This course combines numerical programming techniques with Newtonian physics and calculus to give
the student an understanding of how physical systems can be simulated on a computer. Topics include the
simulation of rigid bodies, soft bodies, fluids, and collision detection. This course emphasizes applications
rather than mathematical theory and involves a significant amount of programming.
3 hours of lecture per week  Prerequisite: CIS 2025 or 2262 or 2271 with a C- or better; MAT 1520; PHY 1041

CIS 5230  Advanced Parallel Programming  (3)  spring
This course examines the applications, algorithms, construction, configuration, and performance of parallel
programs. Topics include shared memory parallelism using POSIX threads and OpenMP and multi-
machine parallelism using MPI. Parallel programming on modern GPU devices is introduced.
3 hours of lecture per week  Prerequisite: CIS 2230, 3050

CIS 5250  Advanced Big Data Processing  (3)  as required
This course describes techniques for processing very large data sets that are typically stored across multiple
machines in a cluster. It's primarily a programming course, although some topics in cluster administration
and configuration are also discussed. Technologies covered include Hadoop (MapReduce), Apache
Spark, Apache Kafka, and other specialized technologies as time allows (e.g. Pig). Fluency with Java is
required; experience with Scala is helpful but not essential.
3 hours of lecture per week  Prerequisite: CIS 2230, 3030

CIS 6050  Advanced Compiler Design  (3)  spring
This course familiarizes the student with how computer languages are implemented. They write a small
compiler for a simplified programming language using compiler construction tools such as lexical analyzer
generators and parser generators as well as creating some hand-built components. Although some theory
is presented, emphasis is on implementation. Programming is done in C or Java.
3 hours of lecture per week  Prerequisite: CIS 3030, 3050

CIS 6140  Advanced Human Computer Interaction  (3)  as required
This course covers the design, implementation, and evaluation of user interfaces for computers and other
modern, complex electronic equipment.
3 hours of lecture per week  Prerequisite: CIS 1152 or 2260

CIS 6721  Master's Project  (1)  as required
This course supports a significant practical individual or small group project taken to completion and then
presented to the community.
1 hours of lab per week

CIS 6740  Graduate Seminar I  (1)  fall
This is a paper-reading and discussion course in which the instructor chooses a selection of papers ap-
propriate to the class members.
1 hour of seminar per week

CIS 6741  Graduate Seminar II  (1)  spring
This is a paper-reading and discussion course and each student is responsible for choosing at least one
paper and leading a discussion on that paper.
1 hour of seminar per week  Prerequisite: CIS 6740
Course Descriptions

Construction Management (CPM)

CPM 1000  CM Freshman Seminar  (1)  fall
This course facilitates a successful transition to college and focuses on orientation to college and academic success strategies. Topics include student rights and responsibilities; grading and graduation requirements; information technology and database orientation; campus resources; time management; note taking; introduction to career opportunities; and program-specific topics including construction program issues, the building construction industry, and professional development. Pass/No Pass.
1 hour of seminar per week

CPM 1010  Electrical/Mechanical Systems  (3)  spring
In this course, the student is introduced to the major environmental systems in a building: electrical and illumination; heating, cooling, and ventilation; and plumbing. It includes an introduction to the influence of the natural environment on the built environment and a consideration for how these effect energy use and conservation. Focus is on the building codes that govern the design of the various environmental systems.
2 hours of lecture, 3 hours of lab per week  Prerequisite: CPM 1021, 1031

CPM 1021  Construction Graphics I  (2)  fall
This course prepares the student to interpret construction drawings by teaching them to create basic architectural drawings by hand. They learn to draw plans, elevations, sections, and details and understand how they relate to each other. Informal sketching techniques are practiced and used throughout. Spreadsheets are introduced with applications appropriate to construction including calculations, quantities, and estimates.
1 hour of lecture, 2 hours of lab per week

CPM 1022  Construction Graphics II  (2)  spring
This course is a continuation of CPM 1021 in which the student reads blueprints residential and commercial construction plans using classroom instruction, drawing of print details, and plan-reading exercises. They perform basic material takeoff techniques used in estimating and apply CAD basic 2D mechanical drafting techniques to drawing plans and design details.
1 hour of lecture, 2 hours of lab per week  Prerequisite: CPM 1021

CPM 1031  Residential Construction Systems  (3)  fall
In this course, the student examines residential construction methods and materials; wood frame construction of floors, walls, and roofs; structural soils; and an introduction to concrete foundations. Topics include stairs, roof rafters, and an introduction to estimating, building codes material takeoff, and structural loads.
3 hours of lecture per week  Corequisite: CPM 1032

CPM 1032  Construction Lab  (2)  fall
This course introduces the student to construction materials and methods, tools, and safety. They work on small building projects and mockups to learn material placement, concrete work, carpentry, siding, and roofing techniques in jobsite conditions.
6 hours of lab per week  Corequisite: CPM 1031

CPM 1111  Commercial Construction Systems  (4)  spring
This course introduces the student to the construction materials and installation methods used in commercial projects. They study soils and foundation types; heavy timber frame construction; masonry, concrete, and steel construction systems; and commercial roofing, insulation, and cladding systems as well as the International Building Code.
4 hours of lecture per week  Prerequisite: CPM 1031

CPM 2010  Construction Estimates I  (3)  fall
This course introduces the estimating principles and procedures used to determine detailed cost estimates for construction bidding purposes. Both residential and light commercial applications are addressed. Topics include organizing an estimate; methods of pricing labor, materials, and equipment; direct and indirect overhead costs; units of measure; computer spreadsheets; and profit; an introduction to contracts and types of bids; and computer estimating software applications.
2 hours of lecture, 3 hours of lab per week  Prerequisite: CPM 1022, 1111; MAT 1210 or 1311

CPM 2020  Construction Project Management  (3)  fall
This course covers the principles of construction project management: design and construction processes; contract documents; organization of the construction firm; subcontractor relationships; records and reports; cost control methods and procedures; schedule control; construction safety; quality control; bar chart; critical path method scheduling; and an introduction to design-build and construction manager contracting.
3 hours of lecture per week

CPM 2030  Elementary Theory of Structures  (4)  spring
This course introduces the student to preliminary analysis of the structural design of building components and frames and serves as an introduction to statics and strength of materials, including properties of materials used in residential and commercial construction. It is an in-depth study of building static loads.
referencing concrete, steel, wood, and pre-engineered wood products.

3 hours of lecture, 3 hours of lab per week  Prerequisite: CPM 1111; MAT 1210 or 1311; PHY 1030

CPM 2050  Construction Management Software  (1)  fall
This course exposes the student to the software used in construction management, particularly spreadsheets and scheduling. Direct instruction is provided by working through tutorial exercises and creating functional spreadsheets and project schedules.
2 hours of lab per week  Prerequisite: CPM 1022

CPM 2060  Field Engineering  (3)  fall
This course introduces the student to the fundamentals of construction field engineering, survey, and building layout. They learn the use and care of survey equipment while performing field practices such as distance measuring; building layout; profile and cross-sectional leveling; and traversing. Trigonometry and geometry are used to balance angles, make distance corrections, and compute areas and volumes.
2 hours of lecture, 3 hours of lab per week  Prerequisite: MAT 1210
[Course fee: $25]

CPM 2720  Construction Supervision  (1)  fall
This is an elective course for construction seniors to gain practice while supervising first-year students in CPM 1032 and managing a jobsite. The course is repeatable for additional credit.
3 hours of lab per week

CPM 2730  Construction Seminar & Project  (3)  spring
This seminar weaves prior coursework into workplace-ready application. The student reads and interprets contracts and specifications for commercial projects of significant scope and develops an estimate of construction time, a project schedule, a schedule of values, and a safety plan through individual and group work.
2 hours of lecture, 3 hours of lab per week

CPM 2801  Construction Internship  (0)  summer
This course is a required summer cooperative education experience that broadens the student's understanding of real-world construction and management. Pass/No Pass.
320 hours of internship per term

CPM 2802  Construction Internship Review  (1)  fall
This course is the review portion of the internship in CPM 2801. Pass/No Pass.
1 hour of seminar per week  Prerequisite: CPM 2801
[Course fee: $250]

CPM 3010  Construction Estimates II  (3)  spring
This course provides an advanced understanding of the theory and practice of construction estimates. Industry projects and case studies demonstrate advanced estimating concepts and processes. Estimating means and methods of a broad range of construction projects, Building Information Modeling, quality takeoff, and estimating software are included.
2 hours of lecture, 2 hours of lab per week  Prerequisite: CPM 2010

CPM 3020  Construction Documents  (3)  spring
This course covers analysis, creation, and organization of construction documents. The student conducts takeoffs and divisional cost controls; creates and tracks submittals; shops drawings; makes requests for information and proposals; interprets specifications, contracts, and architectural, civil, and structural drawings; and interprets LEED, International Building Code, and local zoning and life safety requirements.
3 hours of lecture per week  Prerequisite: CPM 2020, 2730

CPM 3030  Concrete & Steel Lab  (2)  spring
This course prepares the student for the American Concrete Institute's Field 1 Concrete Certificate. They interoperate soil sieve analysis relative to concrete characteristics and examine concrete batch and strength. Methods of testing are practiced through lab experience and analytical reporting. The student works with structural and thin-walled steel.
1 hour of lecture, 2 hours of lab per week  Prerequisite: CPM 1111
[Course fee: $150]

CPM 3130  Construction Soils  (3)  fall
In this course, the student develops a basic understanding of soils in construction and engineering industries. It stresses the applied aspects of soil as a building material and as a medium in other industries such as wastewater design, wetlands, and hazardous waste spills and focuses on hands-on familiarity with soils, soil characteristics, maps, tools, and resources with some technical writing. Topics include excavation; grading; soil investigation techniques; erosion prevention and control; compaction; and foundations in addition to soil basics of texture, structure, soil formation, soil water movement, and soil classification.
2 hours of lecture, 3 hours of lab per week  Prerequisite: MAT 1210 or placement level 2

CPM 4010  Contract Negotiations  (3)  fall
This course is based on a series of simulated negotiations in a variety of contexts including one-on-one, multiparty, third-party, and team negotiations. It improves the student's skills in all phases of negotiations:
understanding negotiation theory as it applies to single and multiparty negotiations; buyer-seller transactions and the resolution of disputes; development of negotiation strategy; and the management of integrative and distributive aspects of the negotiation process.

3 hours of lecture per week

Prerequisite: CPM 2020, 2730

Course fee: $60

CPM 4030  Construction Safety & Risk Management  (3)  fall
This course studies safety problems in the construction and manufacturing environment with emphasis on the day-to-day activities of the construction safety coordinator. Ethical, moral, productivity, and monetary implications of the practices of safety are considered and it culminates in the creation of a workplace safety plan.

3 hours of lecture per week

CPM 4040  Construction Scheduling  (3)  fall
This course explores time management of construction projects. Topics include project scheduling; durations and dependencies; efficiency calculations; critical path method; and cost control models. Industry examples and case studies demonstrate resource allocation, dispute resolution, and productivity. Computer applications for construction scheduling are used to create Gantt charts, network diagrams, and progress reports.

2 hours of lecture, 2 hours of lab per week

Prerequisite: CPM 2020, 2730, 3010; CPM 2802 or 4802

CPM 4120  Project Planning & Finance  (3)  spring
This course uses computerized construction management and accounting software to examine issues in project planning and financial management, along with running a successful construction company. The student learns markups; margins; pricing; fixed and variable costs; and cost controls.

3 hours of lecture per week

Prerequisite: ACC 1020; BUS 3230

CPM 4130  Construction Superintendency  (3)  spring
This course covers the duties and responsibilities of on-site construction leaders with emphasis on the procedures, methods, and administration documentation system used by construction contractors during construction and post-construction phases of a project. Quality control and reporting and motivational and leadership concepts are discussed as they apply to construction.

3 hours of lecture per week

CPM 4140  Construction Contracts  (3)  spring
This course provides an in-depth study of the role of contracts in the construction industry with a focus on the different contractual terms and how those terms control risk allocation and the relationships between parties. It examines legal considerations of standardized construction contracts. The student develops skills in analyzing contracts with an emphasis on dispute prevention.

3 hours of lecture per week

Prerequisite: BUS 2440; CPM 3020

CPM 4730  Preconstruction Services  (3)  fall
This course focuses on the development of comprehensive preconstruction proposals for horizontal and vertical construction. It includes presentation skills and practice to tailor detailed cost analyses, schedules, labor requirements, and methods of construction for multiple construction projects.

3 hours of lecture per week

[Course fee: $200]

CPM 4801  CPM Senior Summer Internship  (0)  summer
This internship is an introduction to commercial construction workplaces with emphasis on field operations and management applications as they apply to commercial, retail, healthcare, industrial, or heavy/highway construction projects. Pass/No Pass.

1 hour of seminar per week

Prerequisite: CPM 4801

[Course fee: $250]

Dental Hygiene (DHY)

DHY 1011  Pre-clinical Dental Hygiene  (5)  fall
This course provides an introduction to the didactic and clinical framework necessary to the practice of dental hygiene. The didactic component consists of learning units covering preventive dental hygiene theory. The primary emphasis of the clinical component is on learning the techniques of basic dental hygiene instrumentation. The student begins to integrate knowledge of theory and practice through simulated patient experiences on manikins and student partners.

3 hours of lecture, 6 hours of lab per week

Corequisite: DHY 1021

[Course fee: $225]

DHY 1012  Clinical Dental Hygiene I  (5)  spring
This course is a continuation of DHY 1011 with emphasis on the clinical component of dental hygiene prac-
Course Descriptions

DHY 1021 Oral Tissues I (3)  fall
This course introduces the student to the common terms used in dental hygiene; the anatomy of the teeth and oral structures; and identification of primary and permanent teeth. It includes an introduction to general histology and embryology with emphasis on the microscopic structures of enamel, dentin, pulp, cementum, periodontal ligament, alveolar bone, gingiva, oral mucosa, and the tongue.
2 hours of lecture, 2.5 hours of activity per week  Prerequisite: DHY 1021
Corequisite: DHY 1022

DHY 1022 Oral Tissues II & Medical Emergencies (3)  spring
This course prepares the student to prevent and manage life-threatening medical emergencies in dental practice with emphasis on reducing the likelihood of life-threatening emergencies; recognizing early warning signs and symptoms; implementing appropriate measures for prevention; and proper management of medical emergencies. It presents basic cell histology, salivary gland histology, and paranasal sinuses and skeletal, muscular, cardiovascular, lymphatic, and nervous systems as they relate to the head and neck. The embryologic development of the face, palate, tongue, and odontogenesis are covered in detail.
2 hours of lecture, 2 hours of activity per week  Prerequisite: DHY 1021
Corequisite: DHY 1012

DHY 1030 Dental Radiology (3)  fall
Dental Radiology is the study, demonstration, and practice of the fundamentals of dental x-ray production and intraoral and extra-oral radiographic techniques utilizing digital imaging. The student learns to recognize the radiographic appearance of normal anatomical structures and common oral disorders.
2 hours of lecture, 2 hours of lab per week  Prerequisite: DHY 1021
Corequisite: DHY 2721

DHY 2010 Dental Materials (3)  spring
This course emphasizes the clinical and theoretical concepts of dental materials and their clinical application and addresses the fundamental concepts of modern chemistry as they relate to the manipulation and use of dental materials. The study of dental materials and their properties provides the student with knowledge of oral health and disease as a basis for assuming the responsibility of assessment, planning, and implementation of preventive and therapeutic services in dental hygiene practice.
2 hours of lecture, 2 hours of lab per week  Prerequisite: DHY 1030, 2721
Corequisite: DHY 2722

DHY 2020 General Pathology & Clinical Dental Pharmacology (3)  spring
This course introduces clinical pathology and pharmacological management in the treatment of dental patients. The student learns to integrate medical diseases commonly found in dental hygiene clinical practice with the pharmacological agents used in the management of those diseases.
3 hours of lecture per week  Prerequisite: BIO 2120; DHY 1030, 2721
Corequisite: DHY 2722

DHY 2030 Periodontics (3)  fall
This course guides the student toward an in-depth understanding of the recognition, progression, and treatment of periodontal diseases. Since the dental hygienist provides direct communication to patients regarding education, prevention, and control of both periodontal diseases and dental caries, they must possess sufficiently detailed knowledge to assist patients to better understand their specific dental condition. Insufficient, inadequate, or faulty understanding on the part of the hygienist regularly shows itself in varying degrees of unsuccessful prevention and incomplete care for patients.
3 hours of lecture per week  Prerequisite: DHY 1022
Corequisite: DHY 1030, 2721

DHY 2210 Community Oral Health I (2)  fall
This course introduces the concepts of community oral health with emphasis on advanced research designs, community health issues, and the function of public health programs. It also introduces sociological study with emphasis on core models and concepts associated with dominant sociological perspectives.
2 hours of lecture per week  Prerequisite: DHY 2722
Corequisite: DHY 3821

DHY 2211 Community Oral Health II (1)  spring
The student uses knowledge gained in DHY 2210 to plan, implement, and evaluate a term-long community outreach project.
1 hour of lecture per week  Prerequisite: DHY 2210, 3821
Corequisite: DHY 2220, 3822

DHY 2220 Oral Pathology (3)  spring
This course integrates knowledge gained from general pathology and basic anatomical, physiological, and dental sciences with concepts of diseases with emphasis on the etiology, histopathology, and treatment
of specific oral diseases; the importance of a comprehensive medical and dental history; recognition of clinical signs and symptoms of oral pathology; and the process of formulating a differential diagnosis of oral lesions based on this information. It highlights oral neoplasia, pulpal pathology, temporomandibular joint disorder, microbial diseases, and selected systemic diseases.

3 hours of lecture per week

Prerequisite: DHY 3821
Corequisite: DHY 3822

DHY 2721 Clinical Dental Hygiene II (4) fall
The didactic portion of this course blends lectures with group discussions to stimulate interest in current clinical situations, theories, and concepts. Emphasis is on the clinical care of special populations, adjunct therapies, and expanding the student’s dental hygiene knowledge base.
1.5 hours of lecture, 8 hours of clinic per week

Prerequisite: DHY 1012, 1022
Corequisite: DHY 1030, 2030

Course fee: $250

DHY 2722 Clinical Dental Hygiene III (4) spring
This course is a continuation of DHY 2721 and involves clinical practice with patients from Class 0 to Class 5 periodontal conditions. Children, adults, and special populations are treated and administration of local anesthetics is included.
1.5 hours of lecture, 8 hours of clinic per week

Prerequisite: DHY 2030, 2721
Corequisite: DHY 2010, 2020

Course fee: $75

DHY 3010 Evidence-Based Decision-Making in Dental Hygiene (3) fall
This course provides fundamental knowledge about evidence-based decision-making in dental hygiene and provides tools and skills needed to locate and review research articles and abstracts quickly and easily so that the student can interpret the literature to provide the best possible patient care and achieve optimum outcomes for patients.
3 hours of online lecture per week

DHY 3015 Contemporary Issues in Dental Hygiene (3) fall
This course examines current societal and professional issues and their impact on practice. The student examines the role of the dental hygienist in increasing access to dental care; researches and compares traditional and alternative practice models; and proposes changes to the healthcare system to improve delivery. It also discusses changing technology in dentistry and dental hygiene; political advocacy; demographic shifts; ethics and professionalism; interprofessional education; and global perspectives of dental hygiene.
3 hours of online lecture per week

DHY 3020 Advanced Periodontics (3) spring
This course expands upon the student’s existing knowledge of current concepts in periodontology including etiology; associated risk factors; periodontal medicine; assessment; treatment planning; implementation and evaluation of contemporary treatment modalities; and maintenance therapy. The interrelationship of periodontal treatment with other dental specialties is discussed along with an investigation of the periodontal literature. Emphasis is on the dental hygienist’s role in periodontal therapy.
3 hours of online lecture per week

Prerequisite: DHY 2030, 3010

DHY 3030 Dental Hygiene Methodology & Leadership (3) spring
This course is designed to provide an introduction to educational concepts and theory relative to dental hygiene education as well as theories, concepts, and principles of leadership that can be applied in the dental hygiene educational and clinical settings. Topics include leadership theories; educational unit lesson plan development and design; goals and objectives; learning styles and motivation; principles of learning; and classroom instruction using educational media and software.
3 hours of online lecture per week

Prerequisite: DHY 3822
Corequisite: DHY 3010

DHY 3821 Clinical Dental Hygiene IV (6) fall
This course is a continuation of DHY 2722.
1.5 hours of lecture, 12 hours of clinic per week

Prerequisite: DHY 2722
Corequisite: DHY 2210

Course fee: $250

DHY 3822 Clinical Dental Hygiene V (6) spring
This course is a continuation of DHY 3821.
1.5 hours of lecture, 12 hours of clinic per week

Prerequisite: DHY 3821
Corequisite: DHY 2220

Course fee: $200

DHY 4010 Advanced Community Oral Health (3) fall
This course provides a comprehensive introduction to evidence-based public health practices through the study and evaluation of existing public health programs with emphasis on the role of evidence-based research as the key to the startup and maintenance of successful dental public health programs. The various components of this course aim to stimulate interaction among learners around important problems and issues facing public health with a focus on community oral health practices.
3 hours of online lecture per week

Prerequisite: DHY 3010
DHY 4213 Practice Management (3) spring
This course enhances the student's ability to provide optimum care while functioning within an interdisciplinary dental team or alternative practice settings through learning skills including communication, teamwork, funding, and business and management practices. The focus is on the skills and knowledge necessary for managing a dental practice or an alternative practice setting in order to improve the delivery of services to patients. The student researches traditional and alternative practice settings and develops and presents their own ideal practice plan.
3 hours of online lecture per week Prerequisite: DHY 3010

DHY 4237 Introduction to Dental Hygiene Research Methods (3) spring
This course includes strengths and limitations of quantitative and qualitative research methods while developing methodological skills and proficiencies related to research. It includes development of literature review, a research proposal, and completion of survey research.
3 hours of online lecture per week Prerequisite: DHY 3010

Diesel (DSL)

DSL 1001 Commercial Driver's License Training (4) fall
In this course, the student receives the training and seat time necessary to pass Vermont's CDL-B exam.
3.5 hours of lecture, 1.8 hours of lab per week
[Course fee: $1,200]

DSL 1010 Steering, Suspension Systems, & Alignment (3) fall
This course comprehensively presents the theory, design, construction, and repair of suspension, steering, and braking systems in diesel-powered equipment and trucks. Topics include steering systems; conventional suspension systems; air suspension systems; wheels and tires; and alignment.
2 hours of lecture, 3 hours of lab per week
[Course fee: $125]

DSL 1020 Diesel Power Systems (4) fall
This course comprehensively presents the theory, design, construction, and repair of the diesel power plant. Topics include fixed and mobile diesel power systems; engine design (types and components); definition of power and calculations; engine disassembly, reconditioning, and reassembly; cooling and lubrication systems; breathing and retarding systems; and run-in, performance, maintenance, and failure analysis.
3 hours of lecture, 3 hours of lab per week
[Course fee: $125]

DSL 1030 Diesel Electronics Lab (1) fall
This lab is the diesel companion to GTS 1120 and includes the practical application of Ohm's law; Kirchhoff's law; analysis, diagnosis, and repair of faulty electrical circuits; and the diagnosis, replacement, and repair of electrical and electronic components.
3 hours of lab per week Corequisite: GTS 1120

DSL 1050 Preventive Maintenance (3) spring
This course presents the development and administration of preventive maintenance programs. Topics include PM schedules; types of services; record-keeping; out-of-service vehicles; winterizing; coolants and additives; oil and lubricants; analysis and additives; contamination control; and track maintenance.
2 hours of lecture, 3 hours of lab per week
[Course fee: $125]

DSL 1070 Diesel Electrical Systems Lab (1) spring
This lab is the diesel companion to GTS 1040 and includes operation and testing of storage batteries, starting systems, charging systems, and basic accessory systems. The student becomes familiar with various types of test equipment, diagnostic charts, and vehicle wiring schematics.
3 hours of lab per week Corequisite: GTS 1040

DSL 1110 Heavy Duty Braking Systems (3) spring
This course comprehensively presents the theory, design, construction, and repair of braking systems in diesel-powered equipment and the performance of wheel alignments on trucks. Topics include alignment; air braking systems; hydraulic and air-over-hydraulic braking systems; ABS and electronic brakes; and noise, vibration, and harshness.
2 hours of lecture, 3 hours of lab per week Prerequisite: DSL 1010
[Course fee: $125]

DSL 2010 Fuel Systems (4) fall
This course comprehensively presents the theory, design, construction, and repair of diesel fuel systems. Topics include an overview of diesel fuel injection systems; the chemistry of combustion; diesel fuel and alternatives; fuel transfer systems; mechanical injector nozzles and Unit Electrical Injectors (UEI); Bosch, Detroit Diesel, Caterpillar, and Cummins DFI systems; governors; system diagnosis and service; and computerized fuel control systems. Light-duty diesel fuel systems are also presented.
3 hours of lecture, 3 hours of lab per week
[Course fee: $125]
Course Descriptions

DSL 2020  Chassis Electrical & Electronic Systems  (4)  spring
This course comprehensively presents advanced diesel chassis electrical and electronic systems and teaches diagnostic and troubleshooting skills. Topics include advanced networks and multiplexing, instrument panels, and AC, lighting, wiper/ washer, alarm, collision avoidance, supplemental restraint, ground-based communication, satellite-based communication, and accessory systems.
3 hours of lecture, 3 hours of lab per week  
Prerequisite: DSL 1020
[Course fee: $125]

DSL 2030  Hydraulics  (3)  spring
This course comprehensively presents the theory, design, construction, and repair of mobile hydraulic systems. Topics include hydraulic systems and components; hydraulic symbols and engineering drawings; pilot systems; and electronic control systems.
2 hours of lecture, 3 hours of lab per week  
Prerequisite: DSL 1020
[Course fee: $125]

DSL 2040  Power Transmission  (3)  spring
This course comprehensively presents power transmission systems and teaches diagnostic and troubleshooting skills. Topics include an introduction to power transmissions; clutches and torque converters; manual transmissions; gear theory; planetary gear theory; hydraulic planetary controls and support systems; powertrain management and electronically controlled transmissions; the Allison commercial Electronic Control (CEC) system; the Eaton AutoShift transmission; drive shafts; final drives; and tracks.
2 hours of lecture, 3 hours of lab per week  
Prerequisite: DSL 1030
Corequisite: DSL 2020
[Course fee: $125]

DSL 2801  DPT Summer Internship  (0)  summer
This course is a ten-week summer cooperative education experience. Pass/No Pass.

DSL 2802  DPT Summer Internship Review  (1)  fall
This course provides a critique for the internship in DSL 2801. Pass/No Pass.
Prerequisite: DSL 2801
[Course fee: $250]

Economics (ECO)

ECO 2060  Survey of Economics  (4)  fall
This course presents both micro- and macroeconomic principles and concepts. Topics include scarcity; human economic behavior; supply and demand; economic markets; gross national product; business cycles; unemployment and prices; recession and inflation; fiscal and monetary policy; and international trade.
4 hours of lecture per week

Education (EDU)

EDU 2051  Teaching Methods I  (3)  as required
This course prepares new CTE teachers coming from their professions to intellectually and emotionally engage their students in academically rigorous activities to teach 21st century skills.
45 hours of lecture per term

EDU 2052  Teaching Methods I (continued)  (3)  fall
This course is a continuation of EDU 2051 that focuses on further skills to manage the classroom; develop and implement curriculum; and engage in best teaching practices.
45 hours of lecture per term  
Prerequisite: EDU 2051

EDU 2061  Teaching Methods II  (3)  as required
This course is a continuation of EDU 2052. It requires effective participation in an online component.
45 hours of lecture per term  
Prerequisite: EDU 2052

EDU 2062  Teaching Methods II (continued)  (3)  summer
This course is a continuation of EDU 2061. It revisits the year’s curriculum and its application to the classroom and to further improvement based on knowledge and experience.
45 hours of lecture per term  
Prerequisite: EDU 2061

EDU 2115  Issues & Trends in Technical Education  (3)  fall
This course covers current issues in technical education. It includes an in-depth examination of state and federal laws and policies that impact Vermont’s career and technical education centers and how these centers can create welcoming, safe, and respectful learning environments for all students. Additional topics include harassment and bullying laws and complaint processes, professional ethics, and state and federal CTE requirements, trends, and funding.
45 hours of lecture per term

EDU 2135  Instruction for Students with Special Needs  (3)  as required
This course teaches technical educators how students learn differently, with an overview of applicable education laws for students with and without disabilities and how schools must provide multiple layers of support for students. It discusses assessment, eligibility, the special education process, and the components of an Individualized Education Plan, as well as 504 and EST plans and how technical educators may provide an environment that’s more focused on students’ strengths than weaknesses. It addresses
the collaborative role the technical instructor plays in the education plan developed for these learners.

EDU 2200  Assessment in the CTE Classroom  (1)  spring
This course is for educators in CTE environments who are striving to implement a proficiency-based learning and assessment approach. Educators use their program’s intended learning standards/skills, scope, and sequence documentation and targeted assessments and begin to analyze and adjust assessments to show evidence of proficiency in order to better promote student learning and accountability within the context of proficiency-based learning.
15 hours of lecture per term

EDU 2650  Education Capstone  (1)  spring
This course helps the student create a professional portfolio for Level I Vermont Teacher Licensure and reviews the Results Oriented Program Approval manual, which serves as a guide to compiling a targeted, thorough, and reflective portfolio.
15 hours of lecture per term
[Course fee: $25]  Corequisite: EDU 2061

EDU 2802  Educational Externship  (1)  fall
This is an education externship for the new CTE teacher.

Electromechanical Engineering Technology (ELM)

ELM 3015  Sensors & Instrumentation  (3)  spring
This course introduces the type of sensors used in research and industry to measure physical and mechanical parameters and the standard methods of interfacing these devices. Topics include investigation of the underlying physical phenomenon which each transducer exploits and various signal conditioning and interfacing strategies. Typical devices covered include strain gages, LVDTs, load cells, pressure transducers, tachometers, accelerometers, temperature sensors, level sensors, and optical sensors.
2 hours of lecture, 3 hours of lab per week  Prerequisite: ELT 1110 or 2072; MAT 1520; PHY 1042  Corequisite: CIS 2025; ELM 1032; MAT 2532

ELM 4015  Electromechanical Power Systems  (3.5)  fall
This course deals with the conversion and manipulation of power with emphasis on power actuator specifications and sizing starting with electronic power actuators and moving to electromagnetic mechanical energy conversion through motors; generators; hydraulic and pneumatic actuators; and pumps. The student designs finite state machine sequential control and logical control using PLCs; implements logical and sequential control using commercial PLCs; and characterizes, manipulates, and controls power devices using lab standard measuring hardware and software.
3 hours of lecture per week, 1.5 hours of lab every other week  Prerequisite: ELM 3015; MAT 3170

ELM 4231  Control Systems I  (3.5)  fall
This course introduces modeling and analysis of various systems (electrical, mechanical, fluid, thermal) through state variable models and transfer functions, including non-linear aspects of real dynamic systems and their linear approximations. It emphasizes control systems, block diagrams, single loop control using industrial controllers (PID), and their experimental tuning. The student applies these concepts in the characterization and control of lab physical plants and uses MATLAB with Simulink extensively.
3 hours of lecture per week, 1.5 hours of lab every other week  Prerequisite: ELM 4231
[Course fee: $125]

ELM 4232  Control Systems II  (3.5)  spring
This course deals with the design of controllers using root locus, frequency response, and other alternative techniques for multivariable systems and includes digital control and its implementation. The student applies these techniques to control lab physical plants and uses MATLAB with Simulink extensively.
3 hours of lecture, 1.5 hours of lab per week  Prerequisite: ELM 4231

ELM 4701  Electromechanical Project I  (2)  fall
This course emphasizes project design and manufacturing issues. Topics include planning and budgeting; design for manufacturability; safety in the design; fabrication techniques; testing for safety and reliability; and quality control. The student gets a small design then selects and begins planning a team-oriented project with major software, electrical, and mechanical components that's completed in ELM 4702.
1 hour of lecture, 3 hours of lab per week  Prerequisite: ELM 3015; ELT 1032, 2041, 2050, 2061; MAT 3170; MEC 1020, 2010, 2035, 2065  Corequisite: ELM 4015, 4231
[Course fee: $250]

ELM 4702  Electromechanical Project II  (3)  spring
This course is a continuation of ELM 4701 dealing primarily with issues of large-scale projects with emphasis on coordination between members of the design teams with frequent seminars and mini-presentations to communicate the design and the team's progress. A major presentation of the team project is required at the end of the term.
1 hour of lecture, 6 hours of lab per week  Prerequisite: ELM 4701  Corequisite: ELM 4232, ELM 3040
[Course fee: $200]
Electrical Engineering Technology (ELT)

ELT 1015  Introduction to Engineering  (1)  fall  
This course facilitates a successful transition to college and to engineering tools and strategies. It focuses on orientation, academic success strategies, professional development, and an introduction to a degree program. It provides hands-on experience using technical software and creating technical documentation using Word, Excel, LabVIEW, and Multisim. Topics include student rights and responsibilities; grading and graduation requirements; campus/site resources; time management; note taking; career opportunities; terminology; layout; chart creation; effective chart usage; and integrating text and graphics.  
3 hours of lab per week  
[Course fee: $140]  
Corequisite: ELT 1031; MAT 1311

ELT 1031  Electrical Circuits I  (4)  fall  
This course is an introductory study of DC and AC electrical circuits that includes electrical charge, current, voltage, resistance, energy, power, capacitance, inductance, and the transient behavior of RC and RL circuits. It develops the concepts of frequency, period, phase, and magnitude of sine waves for AC and examines the electrical circuit parameters as phasors and complex numbers expressed in polar and rectangular form. Major AC topics include reactance, impedance, power, and resonance. Electric circuit theory includes Ohm’s law; Kirchhoff’s laws; series and parallel circuits; and electrical sources. It also introduces voltage and current dividers and Thevenin’s theorem. Lab exercises develop the use of basic measurement equipment, such as the ammeter, voltmeter, and oscilloscope.  
3 hours of lecture, 3 hours of lab per week  
[Course fee: $50]  
Corequisite: ELT 1015; MAT 1311

ELT 1032  Electrical Circuits II  (4)  spring  
This course is a continuation of ELT 1031 and introduces circuit analysis using advanced network theorems and techniques. It covers topics such as superposition; mesh and nodal analysis; Thevenin’s theorem; controlled sources, bridges, power factor correction, transformers, polyphase circuits, filters, parallel resonance, frequency response, and response to non-sinusoidal signals. Lab exercises use oscilloscopes, function generators, and frequency counters on circuits.  
3 hours of lecture, 3 hours of lab per week  
Prerequisite: ELT 1031 or 2071; MAT 1312

ELT 1110  Introduction to Digital Circuits  (3)  spring  
This course introduces basic logic principles, logic circuit definition, and binary number theory and develops the concepts of combinational logic circuits along with logic circuit generation, minimization, and construction. It deals with memory and sequential logic circuits including counters, shift registers, and random-access memories. State machines are discussed and illustrated through more complex systems. The lab develops a strong working knowledge of modern CAD tools and technologies, including VHDL and circuit simulators, as well as the function and application of PLDs.  
2 hours of lecture, 3 hours of lab per week  
[Course fee: $120]

ELT 1411  Industrial Electricity Safety  (2)  fall/spring  
This course provides a survey of various codes applied to the electrical construction industry. Topics include the structure of the NEC (NFPA 70); its various articles and subparts; the basic components (conductors, raceways, grounding) that relate to safety; the importance of OSHA, IEEE, ANSI, UL, and other organizations to electrical safety; the importance of arc flash safety; short circuit and ground fault protection; overload protection; and various circuit protection devices and schemes.  
2 hours of lecture per week

ELT 2015  Introduction to Projects  (1)  fall  
This course introduces electrical product development and fabrication. Topics include schematic and circuit layout software and conventions, printed circuit board assembly, enclosures, connectors, scheduling, budgeting, and documentation. Each student works on a common product of reasonable complexity; develops and assembles a printed circuit board and documents; and presents the finished product. The lab develops practical skills in circuit board layout and fabrication, time management, and technical presentation.  
3 hours of lab per week  
Prerequisite: ELT 1110, 2041

ELT 2041  Electronic Circuits I  (4)  spring  
This is an introductory course in electronic circuits that extends DC-AC circuits into active devices and their associated circuitry. Topics include the transistor as a small signal amplifier and as a switching element; op-amp circuits; diodes; four layer devices; bipolar junction and field-effect transistors; oscillators; switching amplifiers; and interfacing circuits common to computer applications.  
3 hours of lecture, 3 hours of lab per week  
Prerequisite: ELT 1031  
[Course fee: $75]  
Corequisite: MAT 1312

ELT 2042  Electronic Circuits II  (4)  spring  
This course is a continuation of ELT 2041 and addresses electronics from a system and applications view rather than a device view. Topics include two-port networks; cascaded amplifiers; frequency response;
Course Descriptions

Bode plots; differential amplifiers; operational amplifiers; active filters; linear and switching power supplies; oscillators; and modulation.

3 hours of lecture, 3 hours of lab per week

ELT 2050 Microcomputer Techniques (4)
This course introduces the use of microcontrollers in electronic circuits and covers concepts of computer architecture such as CPUs, memory, digital input/output, interrupts, and A/D conversion. The student uses microcontrollers with applications such as PWM motor control, OLED displays, analog sensors, pulse counting, switch, and keypad inputs and advances their ability to program embedded electronic devices using state machines and timing considerations.

3 hours of lecture, 3 hours of lab per week

Prerequisite: ELT 2041; MAT 1520

[Course fee: $50]

ELT 2061 Electromechanical Systems I (4)
This course starts with an overview of control systems using block diagrams for description and analysis and introduces electronic operational amplifier circuits early due to their prevalence in conditioning transducer signals and as analog controller elements. Laplace transform techniques predict both first and second order system responses for the typical input functions. Topics include PID controller functions; steady state error and stability; and algebraic prediction of closed loop responses. Bode Plot analysis in the frequency domain is used as an alternative method to the time domain response.

3 hours of lecture, 3 hours of lab per week

Prerequisite: ELT 1031 or 2071; MAT 1520; PHY 1042

[Course fee: $50]

ELT 2071 Basic Electricity (3)
This course introduces the physical concepts of electricity and electrical devices and covers fundamentals of power, resistance, inductance, capacitance, motors, and generators from the standpoint of their relationship to mechanical applications.

2 hours of lecture, 3 hours of lab per week

Prerequisite: MAT 1312

[Course fee: $50]

ELT 2072 Electronics (3)
In this course, the student examines linear and digital electronics, including PLCs, from the standpoint of the electrical-mechanical interface. Concepts of sensors and transducers, relays, diodes, power supplies, solid state switches, and integrated logic circuits are covered.

2 hours of lecture, 3 hours of lab per week

Prerequisite: CIS 1050; ELT 2071 or MEC 1050

[Course fee: $50]

ELT 2073 LabVIEW (3)
This course introduces the basics of the program and system design platform LabVIEW. The student develops and uses a series of VIs, tests, and control systems within the LabVIEW environment and explores advanced data analysis using the built-in program libraries with results displayed on user-defined graphical readouts.

2 hours of lecture, 3 hours of lab per week

Prerequisite: ELT 1031 or 2071

[Course fee: $300]

ELT 2075 Programmable Logic Controllers (3)
The course presents PLC design methodology, programming procedures, and practical system implementation topics in an interactive lecture setting. The design principles discussed during lecture are reinforced with demonstrations and participative exercises.

3 hours of lecture per week

Prerequisite: ELT 1031; MAT 1520

[Course fee: $50]

ELT 2130 Industrial Electronics (4)
This is a multi-purpose course designed to acquaint the student with the electronic devices, circuits, and computer techniques used to control industrial operations. It specifically includes sensors and related instrumentation; power switching devices; DC and AC motors; stepping and brushless motors; and PLCs. Application and control issues involved with these devices are investigated with additional topics as time permits.

3 hours of lecture, 3 hours of lab per week

Prerequisite: ELT 1032, 2041; MAT 1520

Corequisite: ELT 2042

ELT 2210 Introduction to Solid State Lighting (3)
This course introduces the fundamentals of solid state lighting systems. The student uses various LEDs, optics, and heat sinks to create a total lighting solution and studies various applications for using LEDs for lighting.

2 hours of lecture, 2 hours of lab per week

Prerequisites: MAT 1312; PHY 1041 or 2041

[Course fee: $150]

ELT 2720 Electrical Project (2)
This course introduces electrical product development and fabrication. Topics include schematic and circuit layout conventions; printed circuit board assembly; enclosures; connector and cabling options; and scheduling, budgeting, and documenting the project. Each student works on a product of reasonable complexity; develops and assembles a printed circuit board; and documents and presents the finished product.

1 hour of lecture, 3 hours of lab per week

Prerequisite: ELT 2015, 2041, 2050

Corequisite: CIS 2151 or ELT 2130

[Course fee: $150]
ELT 3010 Digital Circuits II (3) fall
This course extends the student's skill with digital hardware and covers more advanced topics including advanced digital design techniques. They examine various design methodologies such as state machine design and hardware description languages. Applications focus on the design of computer hardware sub-systems such as arithmetic logic units and memory. Labs illustrate the various methods for design entry such as schematic entry and VHDL, simulation, and testing. Designs are implemented using commercial PLDs.
2 hours of lecture, 2 hours of lab per week
Prerequisite: ELT 2050
[Course fee: $100]

ELT 3040 Electronic & Data Communications (3.5) spring
This course introduces the student to concepts necessary to understand both analog and digital data communications in today's networked world. Topics include media characteristics; network protocols; data-encoding techniques; error detection and correction; encryption; data compression; Fourier series analysis, and frequency division multiplexing, noise, and modulation techniques.
3 hours of lecture, 1.5 hours of lab per week
Prerequisite: CIS 2025; ELT 2050; MAT 1520
[Course fee: $100]

ELT 3050 Microprocessor Techniques II (4) spring
This course expands on the microcontroller abilities taught in ELT 2050. Topics include proper embedded software techniques, real-time operating systems, use of state machines, applications using common communication protocols, interfacing to sensors, and display devices. The student creates mixed-language applications using both C and assembly in a structured programming environment.
3 hours of lecture, 3 hours of lab per week
Prerequisite: ELT 2050
[Course fee: $150]

ELT 3053 Electronics III (4) fall
This course is a continuation of ELT 2042, incorporating current devices and techniques in the industry. It has four main topics: power management (including buck and boost switching power supplies, switched capacitor, low-voltage power control circuitry, and drivers); noise, electromagnetic frequency spectrum, AM modulation, frequency modulation, and receivers; RF concepts and high-frequency behavior of passive components and transmission line concepts; and phase lock loop and frequency multipliers.
3 hours of lecture, 3 hours of lab per week
Prerequisite: ELT 2042; PHY 1042
[Course fee: $50]

ELT 3070 Semiconductor Technology (3) fall
This course broadly covers semiconductor technologies as a foundation of all computer and communication systems. It begins with a survey of the unit processes involved in creating CMOS semiconductor chips like lithography, reactive ion etch, and ion implant. It covers the tools and methodologies involved in creating more complex semiconductor circuits such as creation of standard logic libraries, schematics, and layout. The student examines electrical properties of materials and the DC and digital circuit concepts that motivate much of the activity to understand the challenges facing manufacturers and designers in this globally vital industry.
3 hours of lecture per week
Prerequisite: MAT 1312

ELT 4010 Computer Architecture (3) fall
This course discusses the architecture of computer systems inside and outside the CPU. Topics include pipelines; cache; floating-point unit; RISC vs. CISC architecture; branch prediction; pipeline interlocks; coordinating SMP machines; and the system at large (busses of various types, memory architecture, disk controllers, NICs, etc.) Emphasis is on real systems and characteristics of current technology.
3 hours of lecture per week
Prerequisite: CIS 2010

ELT 4020 Digital Signal Processing (3) spring
This course covers DSP theory and applications from an introductory to an intermediate level. The implementation of DSP algorithms and mathematical functions such as IIR and FIR filters, correlation routines, DFTs, and IDFTs are examined.
3 hours of lecture per week
Prerequisite: ELT 2050; MAT 2532

ELT 4701 Electrical Project I (2) fall
This course emphasizes project design, planning, and manufacturing issues. Topics include planning and budgeting; design for manufacturability; safety in the design; fabrication techniques; testing for safety and reliability; and quality control. The student gets a small electrical/electromechanical design on which to apply the lecture material then selects and begins planning a major team-oriented project with major software and electrical components that's completed in ELT 4702.
1 hour of lecture, 3 hours of lab per week
Prerequisite: ELT 1032, 2042, 2050
[Course fee: $250]
Corequisite: ELM 4015, 4231

ELT 4702 Electrical Project II (3) spring
This course is a continuation of ELT 4701 dealing primarily with issues of large-scale projects. Coordination between members of design teams is stressed with frequent seminars and mini-presentations to communicate the team's progress. A major presentation of the team project is required at the end of the term.
1 hour of lecture, 6 hours of lab per week
Prerequisite: ELT 4701
Corequisite: ELM 4232; ELT 3040
[Course fee: $250]

ELT 4701 Electrical Project I (2) fall
This course emphasizes project design, planning, and manufacturing issues. Topics include planning and budgeting; design for manufacturability; safety in the design; fabrication techniques; testing for safety and reliability; and quality control. The student gets a small electrical/electromechanical design on which to apply the lecture material then selects and begins planning a major team-oriented project with major software and electrical components that's completed in ELT 4702.
1 hour of lecture, 3 hours of lab per week
Prerequisite: ELT 1032, 2042, 2050
[Course fee: $250]
Corequisite: ELM 4015, 4231

ELT 4702 Electrical Project II (3) spring
This course is a continuation of ELT 4701 dealing primarily with issues of large-scale projects. Coordination between members of design teams is stressed with frequent seminars and mini-presentations to communicate the team's progress. A major presentation of the team project is required at the end of the term.
1 hour of lecture, 6 hours of lab per week
Prerequisite: ELT 4701
Corequisite: ELM 4232; ELT 3040
[Course fee: $250]
Emergency Medical Services (EMS)

EMS 1020  The Art of Paramedicine  (2)  fall
This course prepares the student to manage human relations challenges; encourages broader views and an awareness of the uniqueness of self and humankind; and explores the finer aspects of communication, listening, assertiveness, and documentation. Topics include confidentiality; legal and ethical behavior; stress management; scene management; the roles and responsibilities of the paramedic; public health; workforce safety and wellness; the impaired provider; research in EMS; the history of EMS; and EMS systems.
2 hours of lecture per week  Corequisite: BIO 2011; EMS 1030, 1040, 1050

EMS 1030  Pharmacology & Medication Administration for the Prehospital Professional  (3) fall
This course covers the concepts of pharmacology needed to understand and safely administer standard prehospital medications. Topics include pharmacokinetics, pharmacodynamics, medication administration, drug dosage calculations, pharmacological terminology, drug legislation, drug references, toxicology, vascular access, and blood products.
3 hours of lecture per week  Corequisite: BIO 2011; EMS 1020, 1040, 1050

EMS 1040  Airway Management for the Prehospital Professional  (1)  fall
This course prepares the student to manage adult, pediatric, and infant airways with emphasis on excellent BLS skills and progresses through the techniques of common prehospital ALS airway skills. The student uses scenarios and simulation prior to advancing to clinical and field opportunities to demonstrate skills.
1 hour of lecture per week  Corequisite: BIO 2011; EMS 1020, 1030, 1050

EMS 1050  Paramedic Principles & Practices I  (2)  fall
This interactive course assesses the student's BLS skills including BLS management, CPR, AED, and oxygen therapy. The student learns Medical Assessment and Trauma Assessment at the ALS provider level and uses simulation and scenario-based activities to incorporate this new knowledge. Upon successful completion of the applicable portions of this course, the student is allowed to advance to the clinical setting (OR and ED). Pass/No Pass.
6 hours of lab per week  Corequisite: BIO 2011; EMS 1020, 1030, 1040
[Course fee: $500]

EMS 1210  Medical Emergencies for the Prehospital Professional  (4)  spring
This course covers common medical complaints encountered by the paramedic. The student uses critical-thinking skills to develop differential diagnoses and plans of care. Topics include respiratory, immunology, hematology, sepsis, endocrine, gastrointestinal, genitourinary, non-traumatic musculoskeletal disorders, allergic reactions, psychological, and neurological emergencies and conditions. The course reinforces and enhances knowledge of anatomy, physiology, and pharmacology and includes Advanced Medical Life Support.
4 hours of lecture per week  Prerequisite: EMS 1020, 1030, 1040, 1050, 1801
Corequisite: BIO 2012; EMS 1230, 1240, 1802

EMS 1230  Cardiology for the Prehospital Professional  (3)  spring
During this intensive course, the student gains in-depth knowledge of cardiac electrophysiology; static and dynamic cardiac rhythm interpretation; arrhythmia management; and assessment and management of common prehospital cardiac-related problems. Topics include 12-lead EKG interpretation; Acute Coronary Syndrome and ST Elevation Myocardial Infarction management; and Advanced Cardiac Life Support. Lecture, scenarios, and simulation opportunities are included to enhance learning.
3 hours of lecture per week  Prerequisite: EMS 1020, 1030, 1040, 1050, 1801
Corequisite: BIO 2012; EMS 1210, 1240, 1802

EMS 1240  Paramedic Principles & Practices II  (2)  spring
This interactive course presents a variety of medical scenarios and simulations requiring paramedic-level assessments and interventions and demonstrates communication skills, teamwork, documentation, and transfer of theory into practice. The student participates in clinical rotations in the ED, OR, ICU, maternity, pediatric, and psychiatric units. Pass/No Pass.
6 hours of lab per week  Prerequisite: EMS 1020, 1030, 1040, 1050, 1801
[Course fee: $150]  Corequisite: BIO 2012; EMS 1210, 1230

EMS 1290  Paramedic Clinical Time (Extended)  (1)  as required
The student who didn't complete all of the clinical objectives in the 240 scheduled hours during the regular didactic portion of the program may schedule additional time to complete the necessary objectives. Locations and times depend on what objectives still need to be achieved. These hours must be completed prior to the start of the next term. Pass/No Pass.
Prerequisite: EMS 1801, 1802, 1803
Corequisite: EMS 1804

EMS 1310  Obstetrics, Gynecology, & Pediatrics for the Prehospital Professional  (3)  summer
In this course, the student learns to assess and manage gynecological and obstetrical emergencies and childbirth and to care for the pediatric patient from birth through age 18. The material includes topics of abuse and neglect; pediatric and neonatal resuscitation; and technology-dependent children.
3 hours of lecture per week  Prerequisite: EMS 1210, 1230, 1240, 1802
Corequisite: EMS 1320, 1330, 1340, 1350

125
EMS 1320 Trauma Management for the Prehospital Professional (3) summer
This course examines the skills and knowledge needed to assess and manage a patient with traumatic injuries and shock. Topics include trauma systems; hemorrhage and shock; special considerations; and the following types of trauma: blunt force; penetrating; soft-tissue; burn; orthopedic; thoracic; abdominal; head, face, neck, and spinal; nervous system; and environmental.
3 hours of lecture per week Prerequisite: EMS 1210, 1230, 1240, 1802
Corequisite: EMS 1310, 1330, 1340, 1350, 1803

EMS 1330 Emergency Medical Services Operations (2) summer
In this course, the student develops their role as an EMS leader; learns about operations for ground and air ambulances; responds to multiple-casualty Incidents; demonstrates incident management and the incident command system; engages in special rescue operations; deals with hazardous materials on emergency scenes; demonstrates crime scene awareness; examines special considerations for rural EMS; and discusses terrorism.
2 hours of lecture per week Prerequisite: EMS 1210, 1230, 1240, 1802
Corequisite: EMS 1310, 1320, 1340, 1350, 1803

EMS 1340 Special Considerations for the Prehospital Professional (1) summer
During this highly interactive course, the student explores challenges in dealing with geriatric, bariatric, and disabled clients. The course presents normal differences based on age, size, and underlying medical problems and challenges the student to think critically about providing the best care possible. Topics include technology-dependent patients and the logistics of emergency calls versus transfers.
1 hour of lecture per week Prerequisite: EMS 1210, 1230, 1240, 1802
Corequisite: EMS 1310, 1320, 1330, 1340, 1350, 1803

EMS 1350 Paramedic Principles & Practices III (2) summer
In this course, the student experiences a variety of trauma, special circumstances, and EMS operations scenarios and simulations to enhance their ability to respond appropriately to similar situations in the field. During this accelerated summer session, the student spends time in the OR; ICU; ED; pediatrics; labor and delivery; and mental health. Pass/No Pass.
6 hours of lab per week Prerequisite: EMS 1210, 1230, 1240, 1802 [Course fee: $150]
Corequisite: EMS 1310, 1320, 1330, 1340, 1350, 1803

EMS 1801 Paramedic Field Experience I (1) fall
This course transitions the student from the role of helper/BLS-provider to team leader. The student rides a total of 36 hours with a paramedic preceptor and incorporates skills learned in first term classes. Pass/No Pass.
36 hours of field experience per term Prerequisite: ENG 1042, 1050, 1040, 1050
Corequisite: BIO 2011; EMS 1020, 1030, 1040, 1050, 1801 [Course fee: $150]

EMS 1802 Paramedic Field Experience II (1) spring
This course allows the student to demonstrate an expanded depth of skills and knowledge. They continue to work with a preceptor to provide safe and therapeutic care, communicate effectively, and demonstrate an understanding of the material covered in class. Pass/No Pass.
112 hours of clinic, 36 hours of field experience per term Prerequisite: EMS 1020, 1030, 1040, 1050, 1801
Corequisite: BIO 2012; EMS 1210, 1230, 1240 [Course fee: $150]

EMS 1803 Paramedic Field Experience III (1) summer
In this course, the student rides with a preceptor, acting as the team leader on calls and honing their professional communication skills. Assessment is based on their ability to perform the functional job description of a paramedic; to coordinate and manage a scene and the patient; and to provide safe and effective care. Pass/No Pass.
142 hours of clinic, 36 hours of field experience per term Prerequisite: EMS 1210, 1230, 1240, 1802
Corequisite: EMS 1310, 1320, 1330, 1340, 1350, 1803 [Course fee: $150]

EMS 1804 Paramedic Field Internship (0) as required
During this immersion experience for the student who has successfully completed all didactic portions of the program, the student acts as a paramedic under the supervision of a preceptor and as the team leader managing the scene, patient, and crew. Assessment is based on their ability to perform the functional job description of a paramedic; to coordinate and manage a scene and the patient; and to provide safe and effective care. This course must be completed prior to the start of the next term. Time is extended as needed to meet the objectives of the internship. Pass/No Pass.
Minimum of 360 hours, maximum of 3 terms drive time Prerequisite: EMS 1310, 1320, 1330, 1340, 1350, 1803 [Course fee: $250]

English (ENG)
ENG 1042 Introduction to College English (3) fall/spring
In this course, the student develops their reading skills by analyzing examples of professional writing and develops their writing skills through internal writing and at least five essays. They review principles of grammar and sentence construction and learn rhetorical strategies. Emphasis is on the process of revision through class editing of essays with computer skills taught in the lab.
3 hours of lecture, 1 hour of lab per week
ENG 1060  Freshman Composition  (3)  as required
In this course, the student thinks and reads critically, writes effectively, and understands the fundamentals of literary analysis and written composition. Classroom discussion of assigned readings and the construction of related essays are stressed. A required research paper demonstrates the student's use of appropriate research materials in terms of locating, organizing, and presenting their materials in standard MLA format. The writing graduation standard and information literacy standard are assessed in this course.
3 hours of lecture per week

ENG 1061  English Composition  (3)  as required
In this course, the student reads and thinks critically, writes effectively, and understands the fundamentals of literary analysis and written composition. Classroom discussion of assigned readings and the construction of related essays are stressed. A required research paper demonstrates the student's use of appropriate resource materials in terms of locating, organizing, and presenting their materials in an accepted format. The writing graduation standard and information literacy standard are assessed in this course, which is writing-intensive.
3 hours of lecture per week

ENG 2080  Technical Communication  (3)  as required
This course is a comprehensive study of the principles, methods, and forms needed to produce clear and effective communications and technical reports, both written and oral. It stresses business correspondence and the use of graphics in documents and oral presentations. A major technical report is required and is used for assessment of the writing graduation standard.
3 hours of lecture per week  Prerequisite: ENG 1061

Equine Studies (EQS)

EQS 2011  Equine Training I  (3)  fall
This course teaches safe and effective techniques for training the green or unbroken horse for various disciplines and develops skills to critically analyze various trainers and strategies. The student views and evaluates equine behavior and the training methods of professionals and gets hands-on practice in groundwork including round-penning, classical lunging, and long-lining with a strong emphasis on safety and developing a positive attitude in the horse. The training horses are introduced to tack and equipment as well as desensitization training.
2 hours of lecture, 2 hours of lab per week  [Course fee: $200]

EQS 2020  Equine Lameness  (3)  fall
This course teaches the student to recognize lameness and gait abnormalities in the horse. They evaluate lameness using physical examination, palpation, and gait evaluation and see veterinary diagnostic methods. They also learn treatments for common skeletal, muscular, neurological, and hoof-related issues, becoming a well-educated equine professional who can recognize lameness, handle the horse appropriately, and make educated decisions about treatment options.
2 hour of lecture, 2 hours of lab per week  Prerequisites: EQS 1032; VET 1020  [Course fee: $200]

EQS 2025  Equitation  (1)  fall/spring
In this riding course, the student develops at their own pace and learns a variety of riding methods. The student learns about correct use of tack for various disciplines or purposes as well as correct technique in their choice of dressage, jumping, hunt seat equitation, or stock seat/western. Not all topics are covered in each course, but all topics are addressed within the sequence, which every student must complete in the correct order. All students are encouraged to take at least one term of dressage and western horsemanship. This course is repeatable for credit. Pass/No Pass.
2 hours of activity per week  [Course fee: $600]

EQS 2041  Equine Massage I  (3)  fall
This course introduces the theory and practice of equine massage. It includes an intensive study of equine anatomy, including muscular and skeletal structures with a focus on identifying soreness and other problems affecting the equine athlete, developing strategies for addressing the problems, and applying therapeutic massage to improve the horse’s mobility, range of motion, and general well-being.
2 hours of lecture, 2 hours of lab per week  Prerequisite: VET 1020  [Course fee: $100]

EQS 2801  EQS Internship  (0)  summer
In this internship, the student participates in an experience of their own choosing while coordinating with the Program Director. They keep a daily log of hours and activities in addition to completing other required documents. Pass/No Pass.
45 hours minimum per term

EQS 2802  EQS Internship Review  (1)  fall
This is the review portion of EQS 2801. Pass/No Pass.
[Course fee: $300]  Prerequisite: EQS 2801
EQS 3012 Equine Training II (3)  fall
This course focuses on refining the green-broke and the trained horse. Attention is given to producing lightness; correcting head and body position; using the horse’s body correctly; achieving balanced and correct gaits; and developing smooth transitions.
2 hours of lecture, 2 hours of lab per week  Prerequisite: EQS 2011 with a C or better
[Course fee: $200]

EQS 3031 Riding Instruction I (3)  fall
This course covers three equitation seats: dressage, western, and hunt seat. The student participates in detailed analysis of human and equine biomechanics; organization and planning of lessons; and implementation of skills and techniques common to all disciplines as well as hands-on problem-solving of biomechanical problems.
2 hours of lecture, 2 hours of lab per week
[Course fee: $200]

EQS 3032 Riding Instruction II (3)  spring
This course focuses on the processes of learning and teaching, the way that people process information, and the elements necessary for excellent instruction. It incorporates knowledge of human and equine biomechanics from EQS 3031 using communication skills; evaluating and working with different learning modalities; and the analysis, organization, and planning of lessons.
2 hours of lecture, 2 hours of lab per week  Prerequisite: EQS 3031
[Course fee: $200]

EQS 3042 Equine Massage II (3)  spring
This course builds upon the foundations established in EQS 2041 with increased attention to muscle and other tissue loosening and alignment to improve equine movement, performance, and comfort. Topics include massage practices, stretching, saddle fit (English and western), and conformation evaluation. Lab sessions provide the student with increasing responsibility for determining areas of concern, developing plans for improvement, and implementing and assessing such measures.
2 hours of lecture, 2 hours of lab per week  Prerequisite: EQS 2041
[Course fee: $100]

EQS 4110 Equine Health & Diseases (3)  spring
This course explores issues relating to equine health management, including signs of health and illness; diseases and their causes; preventive and maintenance care measures; and emergency care for horses.
2 hours of lecture, 2 hours of lab per week  Prerequisite: EQS 2041
[Course fee: $100]

EQS 4610 Equine Studies Senior Seminar (3)  spring
In this capstone course, the student proposes, gains approval for, and completes a research project on a specific area of the equine industry. The project includes a hands-on component and concludes with a substantive written report and an oral presentation. Classes include employment search strategies, guest speakers from various areas of the equine industry, and discussions of current issues within the industry.
3 hours of lecture per week  Prerequisite: EQS 2041
[Course fee: $100]

Fire Science (FSC)
FSC 2020 Fire Service Hydraulics & Water Supply (3)  spring
This course provides a foundation of theoretical and mathematical knowledge to understand the principles of fluids and the use of water in fire protection. The student applies hydraulic principles and formulas to analyze, plan, and solve water supply problems. Fire ground applications include pump operations; hose lines; nozzle pressures and providing adequate water supply for fire suppression; tanker shuttles; and large diameter hose.
3 hours of lecture per week  Prerequisite: MAT 1210

FSC 2210 Fire Administration (3)  spring
This course introduces the organization and management of a fire department and the relationship of government agencies to the fire service. The student views development of fire service leadership traits from the perspective of the chief officer. Topics include grant writing; extensive budget development and presentation; public presentation skills; and analysis of the fire department as a business.
3 hours of lecture per week

FSC 2220 Firefighting Strategy & Tactics (3)  fall
This capstone course provides an in-depth analysis of the principles of fire control through utilization of personnel, equipment, and extinguishing agents on the fire ground. The student makes and documents decisions based on computer-generated scenarios.
3 hours of lecture per week

FSC 2230 Chemistry of Hazardous Materials (3)  spring
This course explores basic fire chemistry relating to the categories of hazardous materials including problems of recognition, reactivity, and the health hazards encountered by firefighters. It prepares the student
to determine an initial course of action for emergency responders and to understand strategies, tactics, and resource management techniques for handling hazardous materials incidents.

Course Descriptions

sophical frameworks, theoretical approaches, argument development skills, and critical thinking to address moral questions pertaining to the beginning and end of life; biotechnology and genetic experimentation; justice in healthcare; responsibilities of physicians; environmental health; and other pertinent topics.

3 hours of online lecture per week     Prerequisite: ENG 1061

HUM 3025  Myth: The Ties That Blend & Bind     3     as required
This writing-intensive course encourages the student to explore a variety of myths from ancient cultures with special attention to their influence on and reflection of social beliefs and structures. It highlights the common elements shared by all mythic structures as a means of examining the global human experience and search for meaning throughout the ages.

3 hours of lecture per week     Prerequisite: ENG 1061

HUM 3050  Theories of Science & Technology     3     as required
This course explores historical and philosophical perspectives with special emphasis on the relationships of science, technology, and social and political structures and individual responsibility. Topics include the nature of science and technology; elitism; goals and control; and the role of the individual scientist or technician.

3 hours of lecture per week     Prerequisite: ENG 1061

HUM 3060  Cyberethics     3     as required
This course introduces the ethical inquiry and the ethical implications of current computing technologies and applications.

3 hours of lecture per week     Prerequisite: ENG 1061

HUM 3210  Cyberethics     3     as required
This writing-intensive course explores broad issues of representation, cultural, social, and political issues and the shaping of a unique culture and people. Through the study of folklore in its various forms; classic and contemporary literature by New England authors; and oral legends, the student gains a broader understanding of New England; its history and culture; and their own role in shaping the culture and world in which they live. A field trip immerses the student in the living history of New England.

3 hours of lecture per week     Prerequisite: ENG 1061

HUM 3490  Crime & Punishment in Film & Literature     3     as required
This course uses film and literature to introduce the fundamental legal and ethical issues in American crime and criminal justice and examines dilemmas in crime and punishment.

3 hours of lecture per week     Prerequisite: ENG 1061

HUM 4010  East & West Holistic Healing     3     as required
This course introduces the student to holistic healing; complementary and alternative therapies; energy and elemental work; multicultural perspectives; and traditional healers. They understand, evaluate, and appreciate traditional holistic models of health and healing, as well as complementary and alternative therapies, and learn and apply at least one chosen modality in their healing work.

3 hours of online lecture per week     Prerequisite: ENG 1061

Interdisciplinary (INT)

INT 0010  Effective Learning     2     fall/spring
This course introduces the student to the behaviors and skills necessary for academic success. Through a series of readings, journals, lectures, and essays, they develop skills in setting goals, developing a sense of personal ownership, responsibility, and self-awareness. They also explore the mechanical skills of note-taking and organization. This course is particularly appropriate for the student on academic probation to achieve and maintain good academic standing. Credits do not count toward graduation.

2 hours of lecture per week

INT 1005  Self, Career, & Culture     3     spring
This course designed for freshman investigates the relationships between individuals, their careers, and the social environments in which they live. The course explores the interactions between self and society and helps to explain the nature of the individual as a student; the nature and impact of the student’s program on society; the relationship among educational disciplines and society; the role of the individual and the student’s career in society; and the responsibilities of citizenship.

3 hours of lecture per week

INT 1021  Creativity & Innovation     3     fall
In this course, the student learns techniques for improving the flexibility and originality of their thinking and explores approaches used by managers and organizations to create and sustain high levels of innovation. Topics include personal thinking preferences; everyday creativity and eliminating mental blocks; creative thinking techniques; idea selection approaches; teaming techniques for creativity; conditions that promote creativity; design for interaction; disruptive technologies; and intellectual property. The course uses fun hands-on activities to stimulate innovation.

3 hours of lecture per week

INT 3060  Leadership Studies     3     as required
This course delivers a diverse, interdisciplinary approach to leadership instruction by introducing great
leaders portrayed in the humanities by writers, historians, and film-makers from ancient times to modern-day, a novel and experiential learning approach to defining and rediscovering leadership qualities.

3 hours of lecture per week

**Landscape (LAH)**

**LAH 1020 Introduction to Horticulture (3) fall**
This survey course introduces the principles and practical applications of horticulture. The student becomes familiar with the basic science that forms the foundation of horticulture and uses this information to understand how horticulture is applied. Topics include fields of horticulture; plant classification; plant structures; plant physiology and development; plant environments; plant propagation; and crop improvement. 3 hours of lecture per week

**LAH 1021 Landscape Graphics (2) fall**
This course familiarizes the student with a broad range of graphic techniques and specific tools necessary for each. Coursework includes freehand drawing; an introduction to mechanical, technical, and computer aided drafting; the conventions of landscape/architectural drawing, including its intentions, capabilities, and use (i.e., a thorough understanding of plan, section, and elevation); three-dimensional drawing techniques: axonometric and perspective (both constructed and freehand); tonal value and texture rendition; shade and shadow; and architectural lettering. 3 hours of lecture per week

**LAH 1030 Woody Ornamentals (3) fall**
This course covers the identification of approximately one hundred native and cultivated woody plants found in northern New England and explores plant nomenclature; plant characteristics and requirements (environmental, cultural, and design/ornamental); plant associations; and horticultural and planting design issues with emphasis on both plant identification and plant selection. Drawing as part of learning is encouraged. Offered every other year. 2 hours of lecture, 3 hours of lab per week

**LAH 1031 CAD for Landscape Applications (2) spring**
This course introduces CAD as a drafting, documentation, production, and presentation tool for landscape design. The student explores software applications such as Photoshop, InDesign, Illustrator, and SketchUp. Specific coursework covers topics such as photo overlay; manipulation; layout; file management; image management and interpretation; composition; and presentation drawings. All work builds upon foundational understanding of digital files, organizational systems, and protocols. 3 hours of studio per week  Prerequisite: LAH 1021

**LAH 1040 Greenhouse Management (3) spring**
This course covers the fundamentals of commercial greenhouse production, control of the greenhouse environment, and effects on plant growth. Topics include greenhouse construction; heating and cooling; growing media; fertilization; watering; pest control; and the production of container-grown crops. 2 hours of lecture, 3 hours of lab per week

**LAH 1050 Introduction to Soils (4) spring**
This course covers soil formation and classification and the ways in which chemical, physical, and biological properties of soil affect plant growth. It examines issues related to soil temperature, aeration, organic matter, and tilth. It explores practices best suited to erosion control and nutrient management. The student learns about soil testing and the most effective liming and fertilizing practices for sustainable management. The college, home gardens, and local farms are used in soil and fertilizer analysis. 3 hours of lecture, 2 hours of lab per week

**LAH 2010 Landscape Construction Practices (3) fall**
This course introduces the materials and methods of landscape construction and management with emphasis on how general intentions develop at the plan and detail level, resolve through sound principles of construction, and are professionally documented according to conventional standards. Coursework includes surveying; map-making; construction of freestanding retaining walls, patios, and walkways; grading earthworks; and the principles of statics and mechanics as they apply to landscape design. 6 hours of studio per week  Prerequisite: LAH 2011  [Course fee: $20]  Corequisite: LAH 1050

**LAH 2011 Introduction to Landscape Design (3) spring**
This course introduces the basic principles of landscape design to build a fundamental knowledge of and fluency in the issues and language of landscape design and its application. The coursework is a progression of basic design principles that build to an increasingly sophisticated understanding of design and its application with a strong emphasis on the interrelatedness of architectural and landscape built form. It emphasizes verbal and graphic communication of ideas and solutions. Individual design projects are developed under faculty supervision and are presented to a jury of faculty and distinguished practitioners. The student receives an overview of landscape architectural history and examines the work of practitioners in the field. 6 hours of studio per week  Prerequisite: ARE 1210 or CPM 1021 or LAH 1021  [Course fee: $10]

<tr>
<td>LAH 2020</td>
<td>Plant Propagation</td>
<td>3</td>
<td>fall</td>
<td>This course presents the principles that explain and control plant propagation. Propagation by seeds, cuttings, grafting, layering, and other common methods is explored in the lab with emphasis on the newest technologies, including tissue culture. 2 hours of lecture, 3 hours of lab per week. Prerequisite: LAH 1020. [Course fee: $10]</td>
</tr>
<tr>
<td>LAH 2030</td>
<td>Herbaceous Plant Materials</td>
<td>3</td>
<td>fall</td>
<td>This course familiarizes the student with approximately one hundred and twenty five herbaceous plants including perennials, annuals, biennials, bulbs, and turfgrass with emphasis on identification; aesthetic and functional use in the landscape; plant culture and maintenance; transplanting; and plant design and composition. Offered every other year. 2 hours of lecture, 3 hours of studio per week.</td>
</tr>
<tr>
<td>LAH 2730</td>
<td>Landscape Contracting Seminar</td>
<td>2</td>
<td>spring</td>
<td>This course helps the student to develop the attitudes and skills essential to career success and acts as a capstone course with a focus on running a successful landscape business. They concentrate on creating a portfolio and working on a project that begins with a design/proposal; includes research into specific zoning regulations and bylaws; follows through with a complete set of takeoffs, estimates, bids, specifications, and short and long form proposals; and ends with a presentation to the client. 2 hours of studio per week.</td>
</tr>
<tr>
<td>LAH 2801</td>
<td>LAH Summer Internship</td>
<td>0</td>
<td>summer</td>
<td>After successful completion of the first year curriculum, the student is required to experience horticulture or design in an employment setting. With the aid of program faculty and staff, the student arranges a summer job or practicum that broadens their understanding of real world horticulture and design. Pass/No Pass. 200 hours of internship minimum per term.</td>
</tr>
<tr>
<td>LAH 2802</td>
<td>LAH Summer Internship Review</td>
<td>1</td>
<td>fall</td>
<td>This is the review portion of LAH 2801. Pass/No Pass. [Course fee: $250] Prerequisite: LAH 2801.</td>
</tr>
<tr>
<td>MAT 1210</td>
<td>Principles of Mathematics</td>
<td>3</td>
<td>as required</td>
<td>This course reviews general math principles and introduces concepts for the solution of agricultural and business problems. Topics include calculator use; basic algebraic operations, solution of linear and quadratic equations; geometry concepts of line, area, and volume; variation; trigonometry of right triangles; growth; compound interest; debt amortization; probability; and statistics. 3 hours of lecture per week. Prerequisite: Placement level 2.</td>
</tr>
<tr>
<td>MAT 1221</td>
<td>Finite Mathematics</td>
<td>3</td>
<td>fall/spring</td>
<td>This course introduces a variety of mathematical tools to solve applied problems. Topics may include functions; graphing; linear models; matrices and linear systems of equations; linear programming; exponential models; elementary probability and statistics; and the mathematics of finance. 3 hours of lecture per week. Prerequisite: Placement level 3 or MAT 1210 with a C- or better.</td>
</tr>
<tr>
<td>MAT 1311</td>
<td>Precalculus I</td>
<td>3</td>
<td>fall/spring</td>
<td>This course stresses the relation of mathematics to engineering applications and the importance of precision in mathematical thought. It covers the use of a graphing calculator; basic geometry; solutions of linear and quadratic equations; right triangle trigonometry; algebraic fractions; and solving logarithmic and exponential equations. 3 hours of lecture per week. Prerequisite: Placement level 4 or MAT 1210 with a C- or better.</td>
</tr>
<tr>
<td>MAT 1312</td>
<td>Precalculus II</td>
<td>3</td>
<td>as required</td>
<td>This course is a continuation of MAT 1311 that covers algebraic fractions; exponents and radicals; proportions and variations; trigonometric functions; law of sines and cosines; vectors; operations with complex numbers; trigonometric identities and equations; and graphs of the trigonometric functions. 3 hours of lecture per week. Prerequisite: MAT 1311.</td>
</tr>
<tr>
<td>MAT 1340</td>
<td>Algebra &amp; Trigonometry</td>
<td>5</td>
<td>fall/spring</td>
<td>This course covers topics in algebra and trigonometry to provide skills for MAT 1420 and is a bridge course for the student who has completed a lower level math or who is off-sequence and hasn’t placed into MAT 1311. Credit is not awarded toward graduation for both this course and MAT 1312. 5 hours of lecture per week. Prerequisite: Placement level 3 or MAT 1210 or 1221 with a C- or better.</td>
</tr>
<tr>
<td>MAT 1420</td>
<td>Technical Mathematics</td>
<td>5</td>
<td>fall/spring</td>
<td>This course stresses the relation of mathematics to engineering applications and the importance of precision in mathematical thought. It covers the use of a graphing calculator; solutions of linear and quadratic equations; exponents and radicals; logarithms; exponential functions; right triangle trigonometry; laws of sines and cosines; vectors; operations with imaginary numbers; trigonometric identities and equations; and graphs of the trigonometric functions. 5 hours of lecture per week. Prerequisite: Placement level 4 or MAT 1340 with a C- or better.</td>

</table>

Course Descriptions
Course Descriptions

MAT 1440  Applied Mathematics for Health Sciences  (3)  as required
This course presents basic concepts needed for success in the applied health sciences. Topics include
basic arithmetic; percentages; ratio and proportion; geometry; unit conversions; dosage and concentration
applications; dilution and infusion rates; basic graphing techniques; and basic algebra.
3 hours of lecture per week  Prerequisite: Placement level 2

MAT 1520  Calculus for Engineering  (4)  as required
This course presents basic concepts of plane analytical geometry and calculus. Topics include differen-
tiation and integration of algebraic, trigonometric, exponential, and logarithmic functions with emphasis
on technical applications; maximum and minimum word problems; related rates; and applications of the
integral to include area and volume.
4 hours of lecture per week  Prerequisite: Placement level 5 or MAT 1420 with a C- or better

MAT 2021  Statistics  (3)  as required
This course introduces the basic ideas and techniques of probability and statistics. Topics include numeri-
cal and graphical descriptive measures, probability, random variables, the normal distribution, sampling
theory, estimation, hypothesis testing, correlation, and regression.
3 hours of lecture per week  Prerequisite: Placement level 3 or MAT 1210 with a C- or better

MAT 2120  Discrete Structures  (3)  spring
This course introduces discrete structures in computer science and covers topics such as sets, set logic,
relations, functions, proof techniques, induction, logic, graphical representations, and algorithms.
3 hours of lecture per week  Prerequisite: Placement level 3, MAT 1210, 1221, or 1311 with a C- or better

MAT 2532  Calculus II  (4)  as required
This course includes techniques and applications of integration, indeterminate forms, and improper inte-
grals, sequences, and series.
4 hours of lecture per week  Prerequisite: MAT 2532 with a C- or better

MAT 2533  Calculus III  (4)  fall/spring
Topics in this course include the calculus of vector-valued functions; tangent and normal vectors; velocity;
acceleration and applications; functions of several variables; partial derivatives; gradients; extreme values
and applications; and multiple integration. Additional topics may include line and surface integrals; para-
metric surfaces; the theorems of Gauss, Green, and Stokes; and differential equations.
4 hours of lecture per week  Prerequisite: MAT 2532 with a C- or better

MAT 3170  Applied Mathematics for Engineering  (3)  spring
This course introduces topics of advanced mathematics and applies them to areas of electrical and me-
chanical engineering analysis. Content includes key methods of solution of both first- and second-order
differential equations that are most useful in engineering analysis, Laplace transforms, and numerical
methods of solution. The student models electrical and mechanical systems and predicts their outputs
using systems of integral and differential equations.
3 hours of lecture per week  Prerequisite: MAT 2532 with a C- or better

MAT 3720  Topics in Discrete Mathematics  (3)  spring
This course introduces fundamental topics in discrete mathematics that offer theoretical support for a
variety of computer applications. Applications such as algorithm development and analysis, error analysis,
and data encryption are best understood with a foundation in logic and writing proofs, set theory, combi-
natorics, probability, number theory, and abstract algebra.
3 hours of lecture per week  Prerequisite: MAT 2532 or MAT 1312 and 2120 or MAT 1520 with a C- or better

Mechanical Engineering Technology (MEC)

MEC 1010  Introduction to Mechanical Engineering Technology  (1)  fall
This course introduces the student to the organization, analysis, and presentation of data related to me-
chanical engineering technology and gives an overview of careers in the field. The primary focus is on soft-
ware applications designed for organizing and formatting information; performing numerical and graphical
analysis; and technical presentation, including Excel, Word, and PowerPoint. The student explores vari-
ous topics (materials properties, energy, strength, and forces) through exercises where information and
numerical data are acquired, organized, analyzed, and presented.
2 hours of studio per week

MEC 1011  Design Communication I  (2)  fall
This course provides a basic understanding of the principles and technology of mechanical drawing and
computer modeling as methods of documenting and communicating mechanical designs. It covers the
concepts of geometric construction and orthographic, sectional, auxiliary, and assembly views and intro-
duces dimensioning methods and types of fasteners. The student gains basic proficiency in using a solid
parametric three-dimensional CAD program to build parts, assemblies, and detailed working drawings.
6 hours of studio per week  [Course fee: $45]

MEC 1012  Design Communication II  (2)  spring
Parametric, three-dimensional solid modeling is the premiere design tool used around the world to cre-
ate innovative product designs. This course develops the techniques necessary to model complex parts, surfaces, and assemblies with emphasis on using design tables and parametric databases to develop part and feature libraries. It pays special attention to creating models and assemblies that can be easily modified and changed and introduces kinematic, dynamic, and finite element analysis techniques. The skills and techniques taught in this course are transferrable to any parametric, three-dimensional design software.

6 hours of studio per week

Prerequisite: MEC 1011

[Course fee: $45]

MEC 1020  Manufacturing Processes I  (2)  fall/spring
This hands-on course with a strong focus on safety and skilled operation introduces the student to a wide variety of manufacturing processes. Although heavily focused on traditional machine tools (lathes, mills, grinders, etc.), it also explores the processes of casting, welding, molding, and industrial cutting (plasma, water-jet, laser). The student works in a small group to produce functional products using today's manufacturing standards.

1 hour of lecture, 3 hours of lab per week

Prerequisite: MEC 1011

[Course fee: $50]

MEC 1040  Introduction to Materials Science & Engineering  (3)  spring
This course introduces the nature and properties of materials that are used in engineering applications. Materials are studied from the perspective of properties, processing, and structure and how they're interrelated. Topics common to all materials are covered, including crystalline structure, mechanical behavior, and property testing. Topics related to metals include defects, phase formation, heat treating, the steel system, and alloy systems. It also covers the properties and structure of ceramics, polymers, and composites.

2 hours of lecture, 3 hours lab per week

Prerequisite: PHY 1041

[Course fee: $20]

MEC 1060  Metrology & Inspection Techniques  (3)  fall
This course explores the fundamental concepts of modern dimensional metrology and related inspection techniques. Topics include the language and system of measurement; tolerances; metrology; statistics of metrology; measurement with graduated scales and scaled instruments; Vernier instruments; micrometer instruments; the development and use of gage blocks; measurement by comparison and high-amplitude comparators; pneumatic measurement; and calibration.

2 hours of lecture, 3 hours of lab per week

Prerequisite: MAT 2021

[Course fee: $15]

MEC 1070  Tool Geometry & Productive Metal Cutting  (1)  as required
This course presents the theory and practical applications of modern cutting-tool technology and equips the student to recognize and define the various geometries associated with cutting tools and how they relate to the material and manufacturing process.

4 hours of lab per week

MEC 1180  Introduction to Welding Processes  (3)  as required
This course covers the fundamentals of oxy-acetylene brazing, welding, and cutting processes; Shielded Metal Arc Welding (SMAW or stick); Gas Metal Arc Welding (GMAW or MIG); and Gas Tungsten Arc Welding (GTAW or TIG) and plasma cutting processes. It prepares the student for American Welding Society entry-level certifications. A major component of the lab is safety.

2 hours of lecture, 3 hours of lab per week

Prerequisite: MEC 1180

[Course fee: $450]

MEC 1190  Advanced Welding Processes  (2)  as required
This course allows the student to pursue advanced welding techniques that lead to AWS pre-certification skills. The student learns blueprint reading for welders and the application of required national codes. Safety, liability, and business ethics are significant elements of this course.

1 hour of lecture, 3 hours of lab per week

Prerequisites: MEC 1180

[Course fee: $450]

MEC 2010  Fluid Mechanics & Fluid Systems  (3)  fall
This course examines the interrelationships between the nature of fluid properties; the behavior of fluids at rest and in motion; and the utilization of fluids to effectively accomplish a wide range of useful purposes. Lab experiences develop a working knowledge of fluid properties, fluid behavior, and fluid systems for power transmission and control.

2 hours of lecture, 3 hours of lab per week

Prerequisite: MEC 1010; PHY 1041

[Course fee $20]

[Corequisite: MAT 1520]

MEC 2035  Statics & Strengths of Materials  (4)  fall
This course focuses on two related topics: the analysis of mechanical systems under static load conditions and the resulting stress in the structures and materials. It follows introductory physics and emphasizes problem-solving skills while addressing commonly used structures and mechanisms. It begins with the analysis of forces and moments on static structures and mechanisms and then applies the methods of statics to analyze the stresses and strains in material structures due to tension, compression loads, shearing, and bending. The student uses stress analysis to evaluate material strength and design limitations of
structures and mechanisms.
3 hours of lecture, 3 hours of lab per week Prerequisite: MEC 1011; PHY 1041
[Course fee: $20] Corequisite: MAT 1520

MEC 2040  Computer-Aided Technology (2) fall
In this course, the student learns G-code programming of machine tools and learns to use computer-aided manufacturing software to generate toolpaths, which are then translated into G-code programs. CNC machine tool set-up and operation are key components and CAD software is used extensively. Other technologies, such as waterjet, laser cutter, and additive manufacturing, may be covered.
1 hour of lecture, 3 hours of lab per week Prerequisite: MEC1011,1020
[Course fee: $85]

MEC 2050  Thermodynamics & Heat Transfer (4) spring
This course familiarizes the student with the first and second laws of thermodynamics, the equations of state, perfect gas processes, and various power cycles and they develop some skill in applying these principles to the analysis of devices which utilize the power cycles such as the Otto, Diesel, Rankine, and vapor-compression cycles. Topics include conduction, convection, and radiation heat transfer.
3 hours of lecture, 3 hours of lab per week Prerequisite: MAT 1520; MEC 2010; PHY 1041
[Course fee $20]

MEC 2065  Kinematics & Dynamics (3) spring
In dynamic systems where objects and mechanical assemblies are moving, the accelerations and velocities are considered in order to analyze the motion and forces on an object. The student in this course acquires a thorough understanding of the displacement, velocity, acceleration, and force characteristics of plane motion and the associated graphical and computer-aided methods of analysis.
2 hours of lecture, 3 hours of lab per week Prerequisite: MAT 1520; MEC 1011; PHY 1041
[Course fee $30]

MEC 2070  Machine Design Components (3) as required
This course familiarizes the student with the various types of machine elements that are used in mechanical design and helps them understand the design intent based on functionality, strength, and durability.
2 hours of lecture, 3 hours of lab per week Prerequisite: MEC 2035
[Course fee $150]

MEC 2071  Machine Design (2) spring
In this course, the student examines the application of mechanical parts such as screws, gears, shafts, bearings, chains, belts, clutches, and brakes to the design of mechanical devices.
2 hours of lecture per week Prerequisite: MEC 2035
Corequisite: MEC 2065

MEC 2150  Introduction to Solar Photovoltaic Technology (3) spring
This course introduces the basics of solar photovoltaic (PV) technology, including solar resource assessment; PV materials and modules; systems components; system sizing and design basics; mechanical mounting systems; installation methods; and performance analysis. It also discusses advanced topics current to the industry and prepares the student to take the NABCEP PV Solar Entry-Level Knowledge Certificate exam.
2 hours of lecture, 2 hours of lab per week Prerequisite: ELT 1031
[Course fee $100]

MEC 2720  Mechanical Projects (3) spring
In this capstone course, the student examines the application of mechanical parts such as screws, gears, shafts, bearings, chains, belts, clutches, and brakes to the design of mechanical devices. A central component of the course is a team-based project to design and fabricate a mechanical system.
2 hours of lecture, 3 hours of lab per week Prerequisite: MEC 2010, 2035, 2040
Corequisite: MEC 2050, 2065
[Course fee: $95]

MEC 3010  Wind Power (3) fall
This course introduces the concepts of wind power and associated technology. Topics include the principles of wind energy and resource assessment; rotor and blade designs; the mechanical and electrical principles of wind turbine systems; types of applications; and the economics and current policies related to wind power. The lab covers the installation of anemometry equipment and data evaluation; fabrication and testing of simple rotors; turbine systems; and monitoring and evaluation of installed systems.
2 hours of lecture, 2 hours of lab per week Prerequisite: PHY 1041
[Course fee $25]

MEC 3021  Manufacturing Processes II (3) fall
This course scrutinizes the theory and practical applications of modern cutting-tool technology. The student learns to recognize and define the various geometries associated with cutting tools and how they relate to the material and manufacturing process.
1 hour of lecture, 4 hours of lab per week Prerequisite: MEC 1011, 1020, 1040, 2040
[Course fee $75]
MEC 3031  Materials Processes  (3)  fall
This course focuses on the processes by which materials are economically processed into different shapes. The student understands the principles and practical knowledge of different materials processes and applies that knowledge when considering the geometry, functionality, and materials required for a product. Topics include processes for metal, polymers, and ceramics; machining, casting, forming, joining, sheet metal, extrusion, additive methods (3D printing), and coating processes. 2 hours of lecture, 3 hours of lab per week  Prerequisite: MAT 1520; MEC 1020, 1040  [Course fee $75]

MEC 3040  Bioenergy  (3)  fall
This course examines bioenergy technologies designed to replace fossil fuel-based heating systems and contribute to the production of renewable energy. It introduces solid, liquid, and gaseous biofuels, though focus is on biomass and anaerobic digestion. Topics include feedstock resources, processing, and characterization methods; systems for energy conversion by combustion/oxidation; policy; permitting; transportation; economics; nutrient recovery; carbon cycling; and life cycle analysis. Case studies focus on systems installed in Vermont. Successful completion of lab chemistry is recommended. 2 hours of lecture, 2 hours of lab per week  Prerequisite: PHY 1041; SSC 2030  [Course fee $15]

MEC 3041  Advanced CNC Machining  (3)  spring
In this course, the student gains expertise in G-code programming, use of professional computer-aided manufacturing software, and using and operating CNC machine tools. Topics include manufacturing procedures; orders of operation; tooling and operation selection; safety hazards; material considerations; machine setup; and fixtures. 1 hour of lecture, 4 hours of lab per week  Prerequisite: MEC 2040  [Course fee $135]

MEC 3120  Advanced Manufacturing & Automation  (3)  spring
This course explores the mechanical aspects of machines and the associated electronic, pneumatic, and fluid-powered components that work together for automated manufacturing and production control including drive mechanisms for feeds, speeds, and power utilization for each component in the manufacturing line such as conveyors, robotic arms, PLCs, machine tools, and workstations. It incorporates the variability in products manufactured in relationship to the equipment capacities. The student learns computer simulation and engages in hands-on production set-ups as well as automated visual and tactile inspection techniques that guarantee product quality. Each mechanism applies the learned aspects to the specifications, functions, and safe operation associated with modern advanced manufacturing. Emphasis is on effective workplace skills including teamwork, problem solving, integrity, and dependability. FANUC robotic arm certification is optional. 1 hour of lecture, 4 hours of lab per week  Prerequisite: MEC 2040, 3021  Corequisite: MEC 3041  [Course fee $85]

MEC 3170  Renewable Energy Heating  (3)  spring
This course provides an overview of heating systems that utilize solar, biomass, and geothermal energy. Topics include the principles of each type of technology; hydronic heating; system sizing; pumps and circulators; heat exchangers and storage tanks; sensors and controllers; plumbing components; integration; and performance analysis. 2 hours of lecture, 2 hours of lab per week  Prerequisite: ARE 2031; PHY 1042  Corequisite: ARE 3050 or MEC 2050  [Course fee $25]

MEC 4010  Lean Manufacturing  (3)  spring
This course develops proficiency in the methods and processes used for lean manufacturing with a focus on understanding lean principles, practices, and techniques from both a technical standpoint and a people perspective, which is needed in order to effectively lead an organization to lean operation and sustain improvements. Topics include the continuous recognition and elimination of waste in operations and reducing time from order to delivery while maintaining or improving product quality. 3 hours of lecture per week  Prerequisite: MAT 2021  [Course fee: $15]

MEC 4020  Quality Assurance  (3)  fall
This course examines the principles and methods of quality assurance including measurement, control, improvement, and management, focusing on applications in the manufacturing field. It introduces basic definitions; statistics; quality policy and objectives; manuals and procedures; concept of variation; inspection and sampling techniques; metrology process control; methods; and the elements of reliability and reviews current TQM and ISO 9000 standards. 3 hours of lecture per week  Prerequisite: MAT 2021

MEC 4120  Renewable Energy Modeling  (3)  fall
This course focuses on methods and tools used for modeling the performance of renewable energy systems. Topics include physical modeling of solar, wind, and bioenergy technologies; using resource data in modeling renewable energy systems; and using commercial tools for performance prediction. 1 hour of lecture, 4 hours of lab per week  Prerequisite: MAT 1520, 2021; MEC 2150, 3170  Corequisite: MEC 3010, 3040  [Course fee: $45]
MEC 4220  Product Design & Production    (3)  fall
This course focuses on product design, advanced manufacturing, and production processes. Topics include concurrent and reverse engineering methods; advanced metrology; automation in manufacturing; abrasive and grinding techniques; water jet machining; 3D printing; and other emerging methods. The student engages in a variety of individual and team-based projects that allow them to expand upon their prior manufacturing and materials processing knowledge and experience while developing marketable workforce skills in advanced manufacturing. As the final project for this course, the student designs, develops, manufactures, markets, and sells a consumer product with the goal of making a profit.
1 hour of lecture, 4 hours of lab per week  Prerequisite: MEC 1060, 3021, 3031, 3041
[Course fee: $95]

MEC 4721  Manufacturing Capstone Project    (3)  spring
This is a required capstone course for the Manufacturing Engineering Technology program that provides an opportunity to apply a combination of skills and knowledge to solve an industrial or real-world manufacturing problem. The student works in a group to tackle an integrated, technical problem presented by regional industry and approved by program faculty. Topics include manufacturing materials and processes, design, quality, lean manufacturing, and automation.
1 hour of lecture, 4 hours of lab per week  Prerequisite: MEC 4020, 4220
[Course fee: $120]  Corequisite: MEC 3120, 4010

MEC 4722  Renewable Energy Capstone Project    (3)  spring
In this course, the student applies knowledge and skills to a project that addresses a renewable energy system or process problem. This capstone project may involve engineering design; scientific research; modeling and simulation; policy and regulations; economic analysis; environmental analysis; operations and management planning; or other activities. If possible, the work is done in a team and includes identifying project scope and specifications; researching and proposing a technical solution; completing a design or process plan that addresses the problem; and communicating through oral and written reports.
1 hour of lecture, 4 hours of lab per week  Prerequisite: MEC 4120
[Course fee: $50]

MEC 4801  MEC Internship    (0)  summer
This internship requires the student to spend at least 200 hours in a professional setting related to their field of study. This broadens the student's understanding of a potential career path and applies gained knowledge and skills in a professional environment. Pass/No Pass.
Minimum of 200 hours per term  Prerequisite: Completion of 60 credits toward major

MEC 4802  MEC Internship Review    (1)  fall
This course reviews the activities and responsibilities that the student experienced in MEC 4801 and is offered in the subsequent term to award credit for completed work. Pass/No Pass.
Prerequisite: MEC 4801

Music (MUS)

MUS 1028  Introduction to Rock & Roll    (3)  as required
In this course, the student discusses the social, economic, and political conditions that influenced the development of rock music and the artists who contributed to its form. They explore a variety of rock styles from the 1950s through the present through extensive listening.
3 hours of lecture per week

Nursing (NUR)

NUR 0111  Principles & Practices of Nursing I Lab    (4)  fall
This is the lab component of NUR 1111. Pass/No Pass.
12 hours of clinic/lab per week  Corequisite: NUR 1111
[Course fee: $70]

NUR 0121  Principles & Practices of Nursing II Lab    (4)  winter
This is the lab component of NUR 1121. Pass/No Pass.
12 hours of clinic per week  Prerequisite: NUR 0111, 1020, 1111
[Course fee: $70]  Corequisite: NUR 1121

NUR 0131  Principles & Practices of Nursing III Lab    (4)  spring
This is the lab component of NUR 1131. Pass/No Pass.
18 hours of clinic per week  Prerequisite: NUR 0121, 1010, 1121; PSY 1050
[Course fee: $70]  Corequisite: NUR 1131

NUR 1010  Pharmacology for Nursing    (3)  winter
This course teaches the classifications of drugs according to body systems and the use of these drugs for the purpose of restoring or maintaining health. It begins with basic terminology and progresses to medication administration and standards and legislation as they relate to drugs. Topics include the role of the nurse, the nursing process, nutrition, and principles of ethics. A basic study of pharmacokinetics explores how drugs are absorbed, transported, metabolized, and excreted. A review of pharmacotherapeutics focuses on how drugs are used by the human body and how the client’s age and unique characteristics
Course Descriptions

**NUR 1020 The Nurse-Client Relationship** (3)  
This course delves into the human relations challenges encountered in a nursing career and implements the philosophy and objectives of the program by stressing the importance of Orem’s self-care deficit theory for the psyche as well as the body. It presents basic principles, concepts, and information regarding communication, listening, and assertiveness to stress the importance of confidentiality and ethical behavior as part of the interdisciplinary team. Additional presentations include the community; the family; cultural diversity; sexual harassment; death and dying; and the impaired professional. Discussions encourage the student to broaden their views and develop an awareness of the uniqueness of humanity.

3 hours of lecture per week  
Prerequisite: NUR 0111, 1020, 1111  
Corequisite: BIO 2012

**NUR 1111 Principles & Practices of Nursing I** (5)  
This course provides the selected knowledge and skills necessary to meet the basic self-care needs of the assigned client in both long-term and acute care settings. It focuses on application of the nursing process in the care of clients with self-care deficits and emphasizes data collection and the role of the practical nurse in the recognition, description, and maintenance of health. Orem’s self-care deficit theory is integrated into practical application during lectures and in NUR 0111. Additional topics include the roles of various healthcare team members, concepts of effective communication, and effective maintenance of a safe and therapeutic environment.

5 hours of lecture per week  
Prerequisite: BIO 1030; NUR 0121, 1010, 1121; PSY 1050

**NUR 1121 Principles & Practices of Nursing II** (5)  
In this course, the student builds upon their knowledge and skills to provide safe, competent, standard nursing interventions to clients experiencing recurring healthcare problems in acute and long-term care settings. They learn to care for groups of clients utilizing the nursing process to organize and implement nursing care and they select appropriate goals to meet the client’s self-care needs, demonstrating an increasing ability to perform standard nursing interventions in the clinical environment with decreasing need for supervision. Observational experiences are provided in certain specialty areas.

5 hours of lecture per week  
Prerequisite: BIO 1030; NUR 0111, 1020, 1111  
Corequisite: BIO 2012; NUR 0121, 1010; PSY 1050

**NUR 1131 Principles & Practices of Nursing III** (5)  
This course explores integrative concepts in nursing and in the developing family. The student expands their knowledge and increases the skills necessary to meet the self-care deficits of individuals experiencing common healthcare problems, with emphasis on parent/child care and mental health. They learn through selected clinical experiences in obstetric, pediatric, and medical-surgical settings in addition to the nursing lab. They also use the nursing process to demonstrate skills in problem solving with a focus on implementation and evaluation of nursing care.

8.3 hours of lecture per week  
Prerequisite: BIO 1030; NUR 0111, 1020, 1111  
Corequisite: BIO 2012; NUR 0121, 1010; PSY 1050

**NUR 2030 Principles & Practice of Nursing IV** (3)  
This course is divided into three content areas: health promotion and physical assessment; psychiatric nursing; and maternity nursing. The health promotion and physical assessment portion of the course focuses on assessing abnormal conditions, encouraging a maximum level of self-care by promoting healthy behaviors, and the importance of an accurate and complete health history (including a psychosocial, cultural, and spiritual assessment) and a health risk appraisal. In the psychiatric nursing portion, the student assesses, plans, and evaluates interventions in the care of the client population, selects an appropriate role to assume, and assists clients to meet their mental health self-care needs. Topics in the maternity portion include assessment, evaluation, planning care, and implementing interventions for normal and abnormal antepartal, intrapartal, and postpartal client at the level of the registered nurse. The student assists...
the maternity client and family to recognize their self-care needs.

3 hours of lecture per week

Course fee: $100

Corequisite: NUR2010, 2040

NUR 2040 Principles & Practices of Nursing IV Lab (2) fall
Lab and clinical experiences reflect the material presented in NUR 2030. The student assists the client and family to recognize self-care needs. They assess, plan, and evaluate interventions in the care of client populations in general medicine, maternity, and mental health settings. Multiple inpatient and outpatient areas provide observational experiences for them to demonstrate skills in decision-making through the use of the nursing process with an emphasis on implementation and evaluation and select the appropriate roles to assume in meeting the patient’s self-care needs. They perform therapeutically in the clinical area with decreasing need for instructor supervision. Pass/No Pass.

6 hours of clinic per week

Course fee: $70

Prerequisite: BIO 2120; NUR 2040

Corequisite: NUR 2011, 2130

NUR 2130 Principles & Practices of Nursing V (6) spring
This course presents patients across the lifespan who are experiencing complex acute medical/surgical illnesses and chronic self-care deficits. Observational experiences are provided in multiple areas such as intensive care, the emergency room, the recovery room, clinics, and home health agencies. The student demonstrates skills in decision-making through the use of the nursing process with an emphasis on implementation and evaluation and selects the appropriate roles to assume in meeting the patient’s self-care needs.

6 hours of lecture per week

Course fee: $330

Prerequisite: BIO 2120; NUR 2040

Corequisite: NUR 2140

NUR 2140 Principles & Practices of Nursing V Lab (4) spring
Lab and clinical experiences reflect the material presented in NUR 2130. The student performs therapeutically in the clinical area with decreasing need for instructor supervision. Pass/No Pass.

12 hours of clinic per week

Prerequisite: NUR 2040

Corequisite: NUR 2101, 2130

NUR 3000 RN to BSN: Online Transition (1) as required
This is the first class in the progression to the BSN program and includes orientation to the program; orientation to the library and student resources; discussion and use of effective online communication and netiquette; and development and presentation of baccalaureate-level presentations.

1 hour of online lecture per week

NUR 3110 Nursing Informatics (3) as required
This course presents ethics, safety, research, professional networking, telemedicine, and the future of informatics in nursing. The student understands the ways information technology supports the acquisition of nursing knowledge with specific consideration given to the nursing role as a knowledge worker and appreciates the application of nursing informatics in achieving patient-centered care.

3 hours of online lecture per week

Corequisite: NUR 3100

NUR 3120 Palliative & End-of-Life Care (3) as required
This course examines pain control, symptom management of various organ systems, and therapeutic communication with patients and their families. It details collaborations with ancillary teams and options for non-medicinal approaches to symptom management. Through a series of case studies and online discussions, the student role plays encounters and details interventions in complex cases using current evidence-based practices.

3 hours of online lecture per week

Corequisite: NUR 3100

NUR 3121 Transitions of Care in Healthcare Reform (3) fall
This course teaches practicing nurses to effectively coordinate patient care transitions between care providers and settings as condition and care needs change. Online and observational experiences bridge the gap between providing nursing care in single settings to coordinating care across settings. Topics include health care reform; nursing role evolution and transformation; risk identification; care coordination; data measurement; and quality improvement. The student examines care transition models including evidence-based methods and tools used by hospitals and community agencies to facilitate effective care transitions. Emphasis is on patient-centric care provided through effective communication and care coordination among healthcare professionals, caregivers, and patients.

3 hours of online lecture per week

Prerequisite: NUR 3100

NUR 3140 Pathophysiology & Assessment (4) as required
This course refines the student’s physical assessment skills, focusing on the assessment differences needed to recognize abnormal findings across the lifespan, especially with at-risk populations, and introduces the basic concepts of pathophysiology. The student explores communication, health histories, and psychosocial impacts in the development of holistic health assessment skills and examines the phenomena that produce alterations in human physiologic function and the resulting responses.

4 hours of online lecture per week

Prerequisite: BIO 2012

Corequisite: NUR 3110
Course Descriptions

NUR 3210 Healthcare Systems (3)  
This course scrutinizes the ways that healthcare is delivered with emphasis on cost, access, outcomes, and the impact of globalization. The student explores the role of the nurse within the healthcare delivery system and in relation to other members of the healthcare team and explores the healthcare disparities in the US. They examine the history of American healthcare delivery, evaluate the efficacy of this system, and articulate a vision of healthcare delivery that examines the contributions of nursing professionals.  
3 hours of online lecture per week  
Corequisite: NUR 3100

NUR 4110 Research & Evidence-Based Practice (4)  
This course analyzes the process of evidence-based practice, which is defined as the synthesis of scientific evidence, clinical judgment, patient preferences, and available resources. The student formulates clinical questions, performs database searches, appraises retrieved evidence, and develops a quality improvement project on a topic of interest.  
4 hours of online lecture per week  
Prerequisite: NUR 3100, 3110, 3120 or NUR 3121, 3140  
Corequisite: NUR 3210, PSY 3070

NUR 4110 Research & Evidence-Based Practice (4)  
This course analyzes the process of evidence-based practice, which is defined as the synthesis of scientific evidence, clinical judgment, patient preferences, and available resources. The student formulates clinical questions, performs database searches, appraises retrieved evidence, and develops a quality improvement project on a topic of interest.  
4 hours of online lecture per week  
Prerequisite: NUR 3100, 3110, 3120 or NUR 3121, 3140  
Corequisite: NUR 3210, PSY 3070

NUR 4011 Teaching/Learning in Healthcare for Allied Health (3)  
This course provides the student with the ability to recognize the teaching and learning needs of their patients in accordance with the philosophic and historical practice of providing patient education.  
3 hours of online lecture per week  
Prerequisite: NUR 3110

NUR 4012 Health Promotion Across the Lifespan (3)  
This course focuses on the role of the nurse in promoting health and reducing risk behaviors of individuals and families across the lifespan. It examines examples of nutrition, physical activity, and stress management with emphasis on the impact of genetics, values, lifestyle, and environmental and cultural influences. The course emphasizes collaboration with other healthcare providers; integration of practice and policy while developing interventions; and patient teaching as essential functions of the nurse.  
3 hours of online lecture per week  
Prerequisite: NUR 3100

NUR 4120 Global Health & Population-Based Healthcare (3)  
There's a great need for nurses who understand global connectedness and the causes and consequences of the distribution of health, illness, injury, and disease. The health of the world’s inhabitants has been impacted by pandemics, environment-caused disease, terrorism, and disasters and nurses are being called upon to care for and improve the lives of affected individuals. This course presents an overview of global health from the viewpoint of nursing and introduces the student to the main concepts of the public health field and the critical links between global health and social and economic development with emphasis on underdeveloped countries. Topics include measures of disease burden; ethics and human rights; environmental health and safety; disparities in the health of women and children; communicable diseases; nutritional challenges; intercultural communication; health and literacy of the marginalized adult; and cultural competency skills.  
3 hours of online lecture per week  
Prerequisite: NUR 3100

NUR 4210 Community Health (6)  
This course explores the role of the nurse generalist in a community setting and focuses on prevention of disease and promotion of health in population aggregates. It examines community theory, change theory, epidemiology, and healthcare resources which support disease prevention and health promotion. These healthcare resources provide a basis for public health nursing and the ability to care for, promote, maintain, and restore the health of communities with emphasis on effective community health practice through assessment, program planning, and nursing care for individuals, families, and vulnerable populations. The changing needs of an increasingly culturally diverse population within the social context of community systems are also examined, along with environmental, economic, political, and legal constraints to the health of community systems. Content integrates concepts from nursing and public health sciences. The student conducts an in-depth community assessment employing basic epidemiological principles and data collection strategies. They utilize the nursing process while engaging in health promotion and maintenance strategies in a variety of community health settings and in assessing and planning interventions for high-risk populations and implement a community change project utilizing change theory and based on their assessment of the community.  
6 hours of online lecture and preceptorship per week  
Prerequisite: MAT 2120; NUR 3110; SOC 1010

Philosophy (PHI)

PHI 1040 Introduction to Ethics (3)  
This course introduces some of the major ethical theories on morally right actions, the morally good
person, and the just society. Theories include ethical absolutism, ethical relativism, ethical egoism, utilitarianism, formalism, and rights theory and may relate to contemporary moral issues such as capital punishment, abortion, and euthanasia.

3 hours of lecture per week

**Physics (PHY)**

**PHY 1030 General Physics (4)**
This general physics course introduces the student to basic classical physics. Topics include Newtonian mechanics, elasticity, fluids, heat transfer, and DC circuits.
3 hours of lecture, 3 hours of lab per week
Prerequisite: MAT 1210

**PHY 1041 Physics I (4)**
This course is a thorough study of the basic principles of physics. Topics include systems of measurement; dynamics, including motion, acceleration, forces producing motion, work, energy, and power; momentum and the conservation laws; statics, including concurrent and nonconcurrent forces; and fluids, including properties of gases, fluid pressure, density, buoyancy, and hydraulics. Successful completion of a physics course is recommended.
3 hours of lecture, 3 hours of lab per week
[Course fee: $10]

**PHY 1042 Physics II (4)**
This course is a continuation of PHY 1041 and emphasizes basic physical concepts that relate both to practical situations and to subsequent technical courses. The fundamental structure of the course provides the student with a firm foundation for understanding semiconductor physics. Topics include thermodynamics; wave motion; electrical and magnetic field theory; light; and solid-state physics.
3 hours of lecture, 3 hours of lab per week
Prerequisite: PHY 1041
Corequisite: MAT 1420

**PHY 2041 Fundamentals of Physics with Calculus I (4)**
This course is an alternative for PHY 1041 for the engineering technology student with strong verbal and math skills to apply calculus as its math component. Topics include system of measurement; dynamics, including motion, acceleration, forces producing motion, work, energy, and power; momentum and the conservation laws; statics, including concurrent and non-concurrent forces; and fluids, including properties of gases, fluid pressure, density, buoyancy, and hydraulics. Successful completion of a physics course is recommended.
3 hours of lecture, 3 hours of lab per week
[Course fee: $10]

**PHY 2042 Fundamentals of Physics with Calculus II (4)**
This course is a continuation of PHY 2041 and emphasizes basic physical concepts that relate both to practical situations and to subsequent technical courses. The fundamental structure of the course provides the student with a firm foundation for understanding semiconductor physics. Topics include thermodynamics; wave motion; electrical and magnetic field theory; light; and solid state physics.
3 hours of lecture, 3 hours of lab per week
Corequisite: MAT 1520

**PHY 3121 Introduction to Modern Physics (3)**
This calculus-based course continues the study of classical physics and introduces the student to topics in modern physics such as special relativity, atomic theory, solid state physics, nuclear physics, and elementary particle theory.
3 hours of lecture per week
Prerequisite: MAT 1520; PHY 1042

**Psychology (PSY)**

**PSY 1010 Introduction to Psychology (3)**
This course introduces the concepts, issues, research, and scientific methods that make up our knowledge of human thought and behavior and provides the basis for further study of psychology as well as a sense of how psychological issues touch on a variety of academic fields and the student's personal life. Topics include research methods, neurophysiology, states of consciousness, learning, memory, theories of personality, motivation, social psychology, and abnormal behavior.
3 hours of lecture per week

**PSY 1050 Human Growth & Development (3)**
This course offers an overview of the human developmental process throughout the life cycle, which includes the social, moral, emotional, cultural, physical, and cognitive aspects of growth. The student is encouraged to explore their own development using the theories of Erikson, Freud, Kohlberg, Piaget, and others integrated into the life-span overview.
3 hours of lecture per week

**PSY 2110 Educational Psychology (3)**
This course examines the psychological constructs surrounding instruction and learning in the classroom. Topics include personality theory, motivation, cognition, developmental issues, family systems, class discipline, hope, anger, sexuality, gender, change, collegiality, and parental interaction. Strategies to create healthy relationships are a central focus.
45 hours of lecture per term
**Course Descriptions**

**PSY 3070 Abnormal Psychology (3) summer**
This course focuses on the symptoms, causes, and treatments of a wide variety of psychological disorders such as mood, personality, somatoform, dissociative, childhood, eating, and sexual disorders; anxiety; schizophrenia; and organic brain syndromes. It explores historical understanding and treatment of abnormal behavior and diagnostic methods used to classify disorders.
3 hours of lecture per week  
Prerequisite: PSY 1010

**Radiologic Science (RAD)**

RAD 1011 Radiologic Clinical Education I (4) fall
This course allows the student to acquire clinical experiences and proficiencies sufficient to demonstrate competency in a specified number and variety of diagnostic procedures.
16 hours of clinic per week

RAD 1012 Radiologic Clinical Education II (4) spring
This course allows the student to acquire clinical experiences and proficiencies sufficient to demonstrate competency in a specified number and variety of diagnostic procedures.
16 hours of clinic per week  
Prerequisite: RAD 1011

RAD 1110 Summer Radiologic Clinical Education I (4) summer
This course allows the student to acquire clinical experiences and proficiencies sufficient to demonstrate competency in a specified number and variety of diagnostic procedures.
18 hours of clinic per week  
Prerequisite: RAD 1012

RAD 1111 Summer Radiologic Clinical Education II (4) summer
This course allows the student to acquire clinical experiences and proficiencies sufficient to demonstrate competency in a specified number and variety of diagnostic procedures.
18 hours of clinic per week  
Prerequisite: RAD 1110

RAD 1210 Radiologic Science I (3) fall
This course concentrates on the fundamental principles of imaging science including the atom, electromagnetic radiation, x-ray tube components, and x-ray production. Discussion includes the primary factors of technique formation and the art of film critique in clinical application of these principles.
3 hours of lecture per week

RAD 1211 Radiologic Science II (3) spring
This course concentrates on the principles that control and contribute to the radiographic image, including density, contrast, and recorded detail. Topics include electricity, magnetism, and x-ray circuitry.
3 hours of lecture per week  
Prerequisite: RAD 1210

RAD 1310 Radiographic Procedures I (4) fall
This is the first of three courses covering radiographic anatomy and positioning. The student uses appropriate medical terminology, performs radiographic exams, and analyzes radiographs critically. Lab positioning begins immediately and includes procedures of the upper and lower extremities, chest, and abdomen. A competency-based curriculum requires the student to prove competency on procedures in the lab prior to performing them in hospital. They must achieve at least 25/28 on a lab competency test for each exam in order to pass.
3 hours of lecture, 1.5 hours of lab per week

RAD 1311 Radiographic Procedures II (4) spring
This is the second of three courses covering radiographic anatomy and positioning. The student learns standard radiographic positioning and related medical terminology of the bony thorax, pelvic girdle, upper femora, and vertebral column. This course involves lab simulation and evaluation. They must achieve at least 25/28 on a lab competency test for each exam in order to pass the course.
3 hours of lecture, 1.5 hours of lab per week  
Prerequisite: RAD 1310

RAD 2113 Radiologic Clinical Education III (4) fall
This course allows the student to acquire clinical experiences and proficiencies sufficient to demonstrate competency in a specified number and variety of diagnostic procedures.
16 hours of clinic per week  
Prerequisite: RAD 1111

RAD 2114 Radiologic Clinical Education IV (4) spring
This course allows the student to acquire clinical experiences and proficiencies sufficient to demonstrate competency in a specified number and variety of diagnostic procedures.
16 hours of clinic per week  
Prerequisite: RAD 2113

RAD 2210 Radiologic Science Review Seminar (1) spring
This course provides an essential review of program topics. It emphasizes and accentuates past learning outcomes to enable the student to pass the American Registry of Radiologic Technologists exam with an in-depth review of the five content categories presented.
1 hour of seminar per week  
Prerequisite: RAD2230, 4011  
Corequisite: RAD 2220
RAD 2220  Radiation Biology (3)  spring
This course explores the principles of radiation biology and radiation protection, including the production of x-rays; the interaction of radiation and matter; radiation units; and methods to protect the radiographer and the patient.
3 hours of lecture per week  Prerequisite: RAD 1211

RAD 2230  Radiographic Pathology (3)  fall
This course provides a survey of the disease process and pathological conditions and presents an in-depth study of diseases commonly demonstrated radiographically.
3 hours of lecture per week  Prerequisite: RAD 1311

RAD 2240  Specialized Imaging (2)  spring
This course concentrates on the principles of fluoroscopy and tomography with an overview of special radiographic procedures and advanced imaging techniques, including computerized tomography and magnetic resonance imaging.
2 hours of lecture per week  Prerequisite: RAD 2220  Corequisite: RAD 2214

RAD 2312  Radiographic Procedures III (4)  fall
This is an interactive course that encourages proactive learning by participating in demonstrations and contributing unusual views or techniques from clinical sites. The student expands their knowledge by learning obscure and specialized radiographic views, including views for specific pathologies; upright vs. supine variations of exam; and exams modified to patient condition. The student learns and perfects out-of-the-ordinary or challenging views they have encountered and complete case studies describing clinical situations in which they used critical thinking or performed an exam in an unusual way.
3 hours of lecture, 1.5 hours of lab per week  Prerequisite: RAD 2312  Corequisite: RAD 2200

RAD 3010  Introduction to Patient Care & Clinical Environments (3)  fall
This course provides concepts of radiologic sciences and patient care and discusses professionalism; effective communication; patient physical needs; assessment; patient consent procedures; x-ray production characteristics; basic radiation protection procedures; health information confidentiality; medical terminology; principles of pharmacology and contrast media; quality management; ethical behaviors; and legal issues in healthcare.
3 hours of lecture per week  Prerequisite: RAD 1011, 1210, 1310

RAD 4010  Radiographic Film Critique (3)  spring
In this course, the student evaluates all aspects of radiographic images, including the assessment of radiographic contrast and density, recorded detail, and anatomical positioning. Discussion includes image assessment criteria for determining the diagnostic acceptability of diagnostic examinations. Activities focus on student presentations for analysis of selected cases and address improvement alternatives focused on positioning and technique selections.
3 hours of lecture per week  Prerequisite: RAD 2312  Corequisite: RAD 2114

RAD 4011  Radiologic Pharmacology (3)  spring
This course introduces drug classifications, terminology, absorption, and reactions to commonly used drugs in the radiology department.
3 hours of lecture per week  Prerequisite: HUM 2020; MAT 1440, 2021; RAD 1011, 1210  Corequisite: RAD 2230

Respiratory Therapy (RSP)

RSP 1010  Foundations of Respiratory Care (3)  fall
This course introduces cardiopulmonary anatomy and physiology as the basis for understanding clinical applications of respiratory care, thus encouraging the student to understand the rationale for making clinical decisions that involve patient assessment and therapeutic measures.
3 hours of lecture per week  Corequisite: RSP 1011

RSP 1011  Respiratory Care I (5)  fall
This course introduces the student to health communication and the legal and ethical issues confronting the respiratory therapist. The student learns to perform the basic assessment skills required to make an objective evaluation of a patient’s condition or response to therapy and begins to develop the competence required to deliver specific respiratory care therapeutics to patients.
4 hours of lecture, 3 hours of lab per week  [Course fee: $125]  Corequisite: RSP 1010

RSP 1012  Respiratory Care II (5)  spring
In this course, the student learns the skills and techniques of managing and treating patients with respiratory needs. It explores the clinical effects of various types of respiratory therapy and diagnostic techniques. Topics include oxygen therapy, aerosol therapy, respiratory drugs, lung expansion therapy, airway clearance therapy, and techniques of airway management.
4 hours of lecture, 3 hours of lab per week  Prerequisite: BIO 2011; RSP 1010, 1011  [Course fee: $125]  Corequisite: RSP 1210, 1601
RSP 1013  Respiratory Care Pharmacology  (3)  fall
This course studies pharmacological principles and practices of respiratory care drugs with emphasis on classification, routes of administration, dosages/calculations, and interaction of the autonomic nervous system. The student explains the mode of action, clinical indications, dosages, hazards, and side effects of adrenergics, anticholinergics, xanthines, mucolytics, wetting agents, steroids, antiasthmatics, decongestants; understands the clinical applications of anti-infectives (including vaccines, surfactants, skeletal muscle relaxants, sedative/hypnotics, analgesics, anticoagulants, thrombolytics, specific cardiovascular agents, and diuretics); explain the concept of conscious sedation; understand the general principles of pharmacology; and identify and define abbreviations and symbols used in respiratory care drug therapy.
3 hours of lecture per week  Corequisite: RSP 1011

RSP 1210  Respiratory Anatomy & Physiology  (3)  spring
This course teaches the basic physiology of the pulmonary system and details the physiological principles underlying various therapeutics, diagnostic, and monitoring procedures in respiratory care. The student interprets patient data, solves problems, and analyzes patient cases using these physiological concepts.
3 hours of lecture per week  Prerequisite: BIO 2011; RSP 1010, 1011  Corequisite: RSP 1012, 1601

RSP 1601  Respiratory Clinical Field Experience  (2)  spring
This is a field experience of one day per week that allows the student to become familiar with the hospital setting; perform basic respiratory therapy in acute care areas of the hospital; and get an introduction to evidence-based practice as it applies to respiratory care. Pass/No Pass.
8 hours of clinic per week  Prerequisite: BIO 2011; RSP 1010, 1011  Corequisite: RSP 1012, 1210

RSP 2011  Cardiopulmonary Disease I  (4)  fall
Analysis of respiratory disturbances requires an understanding of the etiology, pathophysiologic, and clinical signs of the disease. The study of cardiopulmonary disease begins with a presentation of advanced clinical assessment techniques. Discussion covers measures used to evaluate oxygenation, ventilation, electrophysiology of the heart, and hemodynamics in relation to respiratory assessment of the critically ill patient.
4 hours of lecture per week  Prerequisite: RSP 2801  Corequisite: RSP 2012, 2602

RSP 2012  Cardiopulmonary Disease II  (4)  spring
This course is a continuation of RSP 2011 and presents diseases affecting the pulmonary system with emphasis on etiology, pathogenesis, pathology, pathophysiology, and clinical features. It uses a case study approach to enhance the student's ability to exercise judgement in handling patient complaints; collect and examine data; formulate treatment options; assess patient responses to treatment; and modify therapy. It also prepares the student for the NBRC Board Examination.
4 hours of lecture per week  Prerequisite: RSP 2011, 2013, 2602  Corequisite: RSP 2013, 2602

RSP 2013  Respiratory Care III  (5)  fall
This course gives the student an ordered approach to modern ventilator care, lays out a systematic development of mechanical ventilation competencies concept upon concept, and presents noninvasive and invasive monitoring of the patient on mechanical ventilation. In the classroom, the student applies these concepts to patient care scenarios. In the lab, the student complete a series of mechanical ventilation, intubation, extubation, and critical care monitoring competencies.
4 hours of lecture, 3 hours of lab per week  Prerequisite: RSP 2801  Corequisite: RSP 2012, 2602

RSP 2602  Respiratory Clinical Field Experience II  (4)  fall
This is a field experience of two days per week that allows the student to work in acute care, critical care, and specialty service areas of the hospital and in the community. The student is directly and indirectly observed performing respiratory care in the assigned clinical settings. They explore non-traditional roles for respiratory therapists, volunteer time in a selected area of practice outside of the traditional hospital practice, and summarize experiences in written and oral reports. They work on a culminating presentation applying evidence-based practice guidelines. Pass/No Pass.
16 hours of clinic per week  Prerequisite: RSP 2801  Corequisite: RSP 2011, 2013

RSP 2603  Respiratory Clinical Field Experience III  (6)  spring
This course provides a supervised clinical experience in the critical care and specialty service areas of the hospital and the community with a strong emphasis on intensive care techniques and procedures. Instruction takes place in the adult, pediatric, and neonatal areas. The student embarks on infant and pediatric mechanical ventilation and continues to gain proficiency in adult care throughout the medical system. Pass/No Pass.
24 hours of clinic per week  Prerequisite: RSP 2011, 2013, 2602  Corequisite: RSP 2012, 2602
RSP 2801    Respiratory Internship    (0)    summer
This summer field experience is two days per week and allows the student to practice in clinical areas in
which they have received instruction. They are introduced to mechanical ventilators in a lab setting at the
hospital and explore non-traditional roles for respiratory therapists, volunteer time in a selected area of
practice outside the traditional hospital practice, and summarize experiences in written and oral reports.
They begin work on a culminating presentation applying evidence-based practice guidelines. Pass/No Pass.
16 hours of clinic per week, 32 volunteer hours prior to graduation
Prerequisite: BIO 2012; RSP 1601
RSP 2802    Respiratory Internship Review    (1)    spring
This course provides the cumulative completion of RSP 2801. Pass/No Pass.
Prerequisite: RSP 2801
Corequisite: RSP 2012, 2603
Sociology (SOC)
SOC 1010    Introduction to Sociology    (3)    fall
This course is a survey of the basic issues, concepts, theories, and methods of sociology. The student
learns to think critically about the nature of society and social institutions and the relationship among in-
dividuals and groups. Topics include social organization; socialization and social change; social stratifica-
tion; class and class conflict; gender, race; and ethnicity.
3 hours of lecture per week
Social Science (SSC)
SSC 2030    Energy Systems & Sustainability    (3)    fall
This course covers the historical, societal, economic, and technological factors that drive the development
of sustainable energy infrastructure.
3 hours of lecture per week
Prerequisite: ENG 1060
SSC 2720    The Social Ecology of Food    (3)    fall
This course examines social, cultural, political, economic, environmental, and ethical issues related to ag-
riculture and food production, distribution, and consumption. It invites the student to consider more mindful
approaches to food in their own life, as well as exploring the safety issues that plague food production.
3 hours of lecture per week
SSC 3045    News & Newspapers    (3)    as required
This course explores the nature of news: what news is, who controls it, how it's presented, and the many
ways that news and newspapers affect our daily lives with emphasis on how news contributes to an in-
formed citizenship or can be manipulated to influence public opinion and policy.
3 hours of lecture per week
Prerequisite: ENG 1061
SSC 3140    Culture of the Internet    (3)    as required
This course examines the social and cultural structures that have arisen on the internet and as a result
of widespread use of the internet among the population at large. Topics include special characteristics of
Internet culture and how it relates to the broader culture.
3 hours of lecture per week
Prerequisite: ENG 1060
SSC 3660    Class & Educational Success    (3)    fall
This course, framed by the work of Ruby Payne, covers the dynamics of poverty, particularly generational
poverty, and the economic class systems in work and school environments. Topics include Lyndon John-
son’s “War on Poverty” and the TRiO programs developed by the federal government to address the chal-
genges poverty poses for students attempting to obtain higher education. The student has an opportunity
to discuss how these topics relate to their own experience and practice the skills needed to communicate
and work with people from a wide variety of backgrounds to be effective in today’s workforce.
3 hours of lecture per week
Prerequisite: ENG 1060
Veterinary Technology (VET)
VET 1020    Animal Anatomy & Physiology    (4)    spring
This course covers the anatomy and physiology of organs and organ systems in animals with an emphasis
on basic physiology common to domestic animals.
3 hours of lecture, 3 hours of lab per week
Prerequisite: BIO 2320
Course fee: $25
VET 1030    Animal Care & Restraint    (3)    fall
This course teaches the principles of management which are fundamental to animal health and introduces
the basics of animal behavior, feeding, housing, and disease prevention. Labs stress hands-on experience
with handling, restraint, physical exam, and administration of medications to common domestic species
and lab animals. Proficiency in performance of lab tasks is evaluated.
2 hours of lecture, 3 hours of lab per week
Course fee: $25
VET 1040    Animal Diseases    (4)    spring
This course explores bacterial, viral, fungal, and parasitic diseases with a review of disease prevention
Course Descriptions

practices. Labs cover diagnostic techniques including microbiology; fungal cultures and evaluations; parasitological specimen collection and processing; necropsy procedures; and specimen handling and shipping. 

3 hours of lecture, 2 hours of lab per week  
Prerequisite: BIO 2320; VET 1030  
(Course fee: $25)

VET 1051 Animal Care I  (1)  fall 
This course gives the student hands-on experience in the daily care and maintenance of farm, lab, and pet animals. The student is assigned times to care for the colony dogs, cats, rodents, birds, sheep, horses, and dairy animals under supervision. Repeatable for credit. 
1 hour of lecture per week, 4 weeks of activity per term  
(Course fee: $25)

VET 1052 Animal Care II  (1)  spring 
This course gives the student hands-on experience in the daily care and maintenance of farm, lab, exotic, and domestic animals. The student learns requirements for properly documenting all interaction with animals housed in the college facility and works with a partner to encourage teamwork. Repeatable for credit. 
1 hour of lecture per week, 4 weeks of activity per term  
Prerequisite: VET 1051  
(Course fee: $25)

VET 1060 Veterinary Lab Techniques  (4)  spring 
In this course, the student learns to perform venipuncture, complete blood counts, urinalysis, serum chemistry, and supplemental hematologic evaluation on all species studied in VET 1030. Emphasis is on proficiency in performing lab tasks. 
3 hours of lecture, 3 hours of lab per week  
Prerequisite: BIO 2320; VET 1030  
(Course fee: $25)

VET 2011 Veterinary Clinical Techniques I  (4)  fall 
In this course, the student learns the stages of anesthesia and how to induce and monitor anesthesia under direct supervision of a veterinarian. Surgical nursing skills associated with aseptic technique and proper protocols in the surgery suite are covered as well as pre- and post-op monitoring, record keeping, and client education skills. The student performs blood work, urinalysis, and fecal examination on animals that are scheduled for anesthesia as medically indicated. Some preparatory work and patient monitoring is required outside of scheduled lab time. 
3 hours of lecture, 3 hours of lab per week  
Prerequisite: VET 1020, 1040, 1060, 2801  
(Course fee: $25)

VET 2012 Veterinary Clinical Techniques II  (3)  spring 
This course covers radiography of both large and small animals. The labs review anesthesia while the student learns to position animals for radiographs and develop, handle, and store the films. Ancillary techniques such as dentistry procedures are also covered. The student performs blood work, urinalysis, and fecal examination on animals that are scheduled for anesthesia as medically indicated and performs post-anesthesia monitoring. Some preparatory work and patient monitoring is required outside of scheduled lab time. 
2 hours of lecture, 3 hours of lab per week  
Prerequisite: VET 2011, 2050, 2070  
(Course fee: $25)

VET 2030 Animal Nutrition  (2)  fall 
This course covers various nutrients and their metabolism and diet formulation for common domestic and lab animals, including species variation in nutritional requirements. Practical information regarding client education for feeding both large and small animals is presented, as is the use of prescription diets for small animals. Nutrition-related diseases are also discussed. 
2 hours of lecture per week  
Prerequisite: VET 1020

VET 2040 Reproduction & Genetics  (3)  spring 
This course provides instruction in genetics and comparative reproductive physiology of domestic animals and covers reproductive management, including heat detection; determination of pregnancy; management of pregnant animals and parturition; and reproductive failure. The student assists a veterinarian with reproductive and obstetrical procedures. 
3 hours of lecture per week  
Prerequisite: VET 2070

VET 2050 Veterinary Applied Lab Methods  (4)  fall 
In this course, the student learns medical nursing skills including bandaging, responding to medical emergencies, performing CPR, handling trauma cases, preparing animals for specific diagnostic procedures, obtaining an EKG, completing blood transfusions, and offering fluid therapy. The student also collects and evaluates cytological specimens. 
3 hours of lecture, 3 hours of lab per week  
Prerequisite: VET 1020, 1040, 1060  
(Course fee: $25)

VET 2060 Veterinary Office Procedures  (3)  spring 
In this course, the student reviews material on professionalism and interactions with clients that they have been introduced to in other courses before progressing to new information on interpersonal communication, professional correspondence, legal issues regarding medical records, organizing an office, financial
record keeping, OSHA compliance, evaluating a potential job position, and getting and keeping a job.

3 hours of lecture per week

**VET 2070  Veterinary Pharmacology & Toxicology (3)**  fall
This course reviews dose calculation, dispensing, and administration of medications. The metabolism of commonly used veterinary medications and their beneficial and potential harmful effects on the body are covered. The student becomes familiar with common poisonous substances and plants and assists a veterinarian in treating toxicity cases.

3 hours of lecture per week  Prerequisite: VET 1020, 1040, 1060

**VET 2080  Animal Behavior (2)**  fall
This course gives the student a grounding in the natural behaviors of common domestic species including neural, genetic, and endocrine bases for these behaviors. In addition, many aspects of clinical behavioral medicine are covered, including patient history-taking; reviews of common behavioral problems of dogs and cats; patient evaluation; behavior modification; and drug therapy.

2 hours of lecture per week

**VET 2090  Veterinary Technician National Exam Prep Seminar (1)**  spring
This course is a comprehensive review of the core curriculum material presented in the first three terms of the program to prepare the student for standardized professional examinations such as the Veterinary Technician National Exam.

2 hours of seminar per week  Prerequisite: VET 2011, 2030, 2050, 2070

**VET 2720  Veterinary Supervisor (1)**  fall/spring
This supervisory course is required for all veterinary technology students and is repeatable for credit.

1 hour of lecture per week, 4 weeks of activity per term  Prerequisite: 2 terms of VET 1051

**VET 2801  VET Summer Externship (0)**  summer
The student enrolls in this externship after successful completion of the first-year core curriculum. The externship consists of a summer practicum in which the student may attend one or more sites in order to gain appropriate experiences. Successful completion of the externship is required for graduation. Pass/No Pass.

300 hours minimum per term

**VET 2802  Summer Externship Review (1)**  fall
This course is the review portion of VET 2801.

[Course fee: $250]  Prerequisite: VET 2801

### Special Topics (XXX)
These course numbers are for one-time or special offerings that don't have an approved course number. They may be in any subject area and the credits may vary. The special topics course requirements and evaluation criteria are developed by the instructor, subject to department approval. Details of specific course content are available from the Department Chair for the subject offered.

**XXX X610  Special Topics**  as required

**XXX X620  Special Topics**  as required

**XXX X710  Special Topics**  as required

**XXX X720  Special Topics**  as required
